Energy measurement per phase, i.e. output requirement of an entire IT rack. Thanks to the compact PDU, any IT rack may be easily equipped with a professional power distribution system. With the TS IT rack, assembly is even tool-free. The compact design allows simple assembly. The OLED display shows the energy consumption. An integrated web server can be used as a direct network connection with extensive user administration. Redundant power is supplied form all phases via an existing PoE (Power over Ethernet) network. PDU offers extensive monitoring functions. A measuring accuracy of up to 1% guarantees reliability.
