# **Overview**

VIVOTEK's FD836B-HV range is a series of robust, dome-style network cameras designed for diverse outdoor applications and offering a broad range of options. Equipped with a Full HD sensor enabling viewing resolution of 1920x1080 at a smooth 30 fps, the FD836B-HV series are all-in-one outdoor cameras capable of capturing high quality and high resolution video at up to 2 Megapixels whether in high contrast or low light with WDR and SNV technology.

Further increasing its flexibility, VIVOTEK's FD836B-HV series provides options for both fixed focus for simple operation without extra electrical power, and remote focus with built-in stepping motors and P-iris to provide precise adjustment remotely.

To meet the demands of any harsh outdoor application, VIVOTEK's FD836B-HV series is also armed with IP66-rated housing to help the camera body withstand rain, dust and high pressure water jets from any direction, while its IK10-rated housing provides robust protection against acts of vandalism or other impacts.

Finally, a wide operating temperature range further enhances the FD836B-HV's performance and reliability in extremely cold or hot weather, even when using PoE. When choosing VIVOTEK FD836B-HV series, customers will be offered four options: the FD836B-HVF2, FD836B-EHVF2, FD836B-HTV, and FD836B-EHTV. Different options can be chosen based on the requirements of your application, such as the need for a specific focusing method or operating environment temperature.

VIVOTEK's FD8382 is a series of economic professional outdoor fixed dome network cameras in VIVTOTEK's 5MP Lite series which offer up to 15 fps at 5-Megapixel or 30 fps at 1080p resolution at a competitive price. To create the perfect focus required to reap the benefits of higher resolutions, VIVOTEK's FD8382 series provides the options of both fixed focus, used for simple operation without electrical power, and remote focus with built-in stepping motors and P-iris for precise adjustment remotely.

Designed to provide higher resolution, the FD8382 series is an ideal solution to provide sharper image with more details. With powerful 3D Noise Reduction technology and Smart Stream technology, the IB8382 series can also optimize resolution for a desired object or area to maximize efficiency of bandwidth usage.

To provide higher resolution in outdoor and harsh environments, VIVOTEK's FD8382 series is also armed with IP66-rated housing to help the camera body withstand rain, dust and high pressure water jets from any direction, while its IK10-rated housing provides protection against acts of vandalism or other impacts. Additionally, a wide operating temperature range further improves the FD8382-EVF2 and the FD8382-ET's performance and reliability in extremely cold or warm weather, even when using PoE.

With the highly flexible VADP (VIVOTEK Application Development Platform), users can extend the features of this series by adding third-party applications for the FD8382-VF2, FD8382-EVF2, FD8382-TV, and FD8382-ETV. Thus, the FD8382 series is not only equipped with multiple focusing methods and wide temperature range options, is but ideal for a wide variety of applications.

# **Revision History**

- Rev. 1.0: Initial release.
- Rev. 1.1: Updated URL commands to rev. 1.4b.

# **Read Before Use**

The use of surveillance devices may be prohibited by law in your country. The Network Camera is not only a high-performance web-ready camera but can also be part of a flexible surveillance system. It is the user's responsibility to ensure that the operation of such devices is legal before installing this unit for its intended use.

It is important to first verify that all contents received are complete according to the Package Contents listed below. Take note of the warnings in the Quick Installation Guide before the Network Camera is installed; then carefully read and follow the instructions in the Installation chapter to avoid damage due to faulty assembly and installation. This also ensures the product is used properly as intended.

The Network Camera is a network device and its use should be straightforward for those who have basic networking knowledge. It is designed for various applications including video sharing, general security/surveillance, etc. The Configuration chapter suggests ways to best utilize the Network Camera and ensure proper operations. For creative and professional developers, the URL Commands of the Network Camera section serves as a helpful reference to customizing existing homepages or integrating with the current web server.

# **Package Contents**

- FD836B-(E)HVF2, FD836B-(E)HTV, FD8382-(E)VF2, FD8382-(E)TV
- Screw pack
- Quick Installation Guide & alignment sticker

# Symbols and Statements in this Document

**INFORMATION:** provides important messages or advices that might help prevent inconvenient or problem situations.

**NOTE**: Notices provide guidance or advices that are related to the functional integrity of the machine.

**Tips**: Tips are useful information that helps enhance or facilitae an installation, function, or process.

**WARNING! or IMPORTANT!**: These statements indicate situations that can be dangerous or hazardous to the machine or you.

**Electrical Hazard**: This statement appears when high voltage electrical hazards might occur to an operator.

# **Physical Description**

# NOTE:

The "T" and "HT" models have an auto-focus motorized lens. Some of the suffix syntax are listed below:

E	w/ heater for extreme weather
Fx	Focal length w/ number
Т	w/ Remote focus lens
R	w/ PoE repeater
Н	w/ High Dynamic Range functionality also known as WDR

### Hardware Installation

1. Jot down the camera's MAC address for later reference. This is especially important if you install numerous cameras at an installation site.

2. Remove the dome cover by loosening the retention screws on the dome cover.

- 3. Loosen and remove the waterproof connectors.
- 4. Insert an Ethernet cable through the cable gland, and the rubber seal.
- 5. Remove part of cable sheath.
- 6. You will need an RJ45 crimping tool to attach the Ethernet wires to a connector. When done, connect the cable to the camera's Ethernet RJ45 socket.

# 7

7. If applied, connect DI/DO wires, 12V DC power, or audio wires to the terminal block.

#	Name
1	EXT_MIC_N
2	EXT_MIC_P
3	Audio_out-
4	Audio_out+
5	DI-
6	DI+
7	DO-
8	DO+
9	12V DCIN
10	12V DC+_IN

# 8

8. Attach the included alignment sticker to a preferred location. Drill holes for mounting screws and if preferred, drill one or two routing holes.

# 9

9. When fastening the screws, do not completely tighten the screws. Pass cables through the routing holes, and then mount the camera by passing the screw heads through the keyhole slots. Turn the camera counter-clock wise, and then fasten the screws.

10. If you route your cables through the side opening, you can use the side bushing to connect a protective 3/4" conduit. The conduit is user-supplied. You can use the included screws to secure the side bushing to wall.

Please avoid using a conduit with a hex nut larger than 35mm.

11. Install the "Installation Wizard 2" software utility from your software CD. The program will search for VIVOTEK Video Receivers, Video Servers or Network Cameras on the same LAN.

Double-click on the camera's MAC address to open a browser management session with the camera.

12. With a live view displayed on your laptop, adjust the zoom and focus to obtain an optimal image. Check the live view to ensure the image is in focus.

The "T" models comes with motorized focus lens. Use the Auto Focus function in firmware menu for best image.

13. Align and install the dome cover.

14. Remove the protection membrane from the dome cover.

### **LED Definitions**

	ltem	LED status	Description
LED	1	Steady Red	Powered and system booting, or network failed
-		Red LED off	Power off
De		Green LED off	Network is disconnected
	2	Steady Red and Green LED blinks every 1 sec.	Connected to network
finitions	3	Green LED blinks every 1 sec. and RED LED blinks consecutively every 0.15 sec.	Upgrading firmware
	4	Green and RED blink every 0.15 sec, Green and RED light on, then blink again.	Restoring defaults
	5	RED LED is on, Green LED blinks and RED LED is constantly on.	Status after a reset (network connected)
		Green and RED LEDs are constantly on.	Status after a reset (network disconnected)

### Hardware Reset

The reset button is used to reset the system or restore the factory default settings. Sometimes resetting the system can return the camera to normal operation. If the system problems remain after reset, restore the factory settings and install again.

<u>Reset</u>: Press the recessed reset button. Wait for the Network Camera to reboot.

<u>Restore</u>: Press and hold the reset button until the status LED rapidly blinks. Note that all settings will be restored to factory default. Upon successful restore, the status LED will blink green and red during normal operation.

### **SD/SDHC/SDXC** Card Capacity

This network camera is compliant with **SD/SDHC/SDXC 16GB / 8GB / 32GB / 64GB** and other preceding standard SD cards.

# **Network Deployment**

### **General Connection (PoE)**

#### When using a PoE switch

The Network Camera is PoE-compliant, allowing transmission of power and data via a single Ethernet cable. Follow the illustration below to connect the Network Camera to a PoE switch via an Ethernet cable.

#### When using a non-PoE switch

Use a PoE power injector (optional) to connect between the Network Camera and a non-PoE switch.

### 🥖 NOTE:

1. The camera is only to be connected to PoE networks without routing to outside plants.

2. For PoE connection, use only UL listed I.T.E. with PoE output.

#### Internet connection via a router

Before setting up the Network Camera over the Internet, make sure you have a router and follow the steps below.

 Connect your Network Camera behind a router, the Internet environment is illustrated below. Regarding how to obtain your IP address, please refer to Software Installation on page 17 for details.

- 2. In this case, if the Local Area Network (LAN) IP address of your Network Camera is 192.168.0.3, please forward the following ports for the Network Camera on the router.
  - HTTP port: default is 80
  - RTSP port: default is 554
  - RTP port for video: default is 5556
  - RTCP port for video: default is 5557

If you have changed the port numbers on the Network page, please open the ports accordingly on your router. For information on how to forward ports on the router, please refer to your router's user's manual.

3. Find out the public IP address of your router provided by your ISP (Internet Service Provider). Use the public IP and the secondary HTTP port to access the Network Camera from the Internet. Please refer to Network Type on page 72 for details.

#### Internet connection with static IP

Choose this connection type if you are required to use a static IP for the Network Camera. Please refer to LAN setting on page 71 for details.

#### Internet connection via PPPoE (Point-to-Point over Ethernet)

Choose this connection type if you are connected to the Internet via a DSL Line. Please refer to PPPoE on page 72 for details.

Configure the router, virtual server or firewall, so that the router can forward any data coming into a preconfigured port number to a network camera on the private network, and allow data from the camera to be transmitted to the outside of the network over the same path.

From	Forward to
122.146.57.120:8000	192.168.2.10:80
122.146.57.120:8001	192.168.2.11:80

When properly configured, you can access a camera behind the router using the HTTP request such as: http://122.146.57.120:8000

If you change the port numbers on the Network configuration page, please open the ports accordingly on your router. For example, you can open a management session with your router to configure access through the router to the camera within your local network. Please consult your network administrator for router configuration if you have troubles with the configuration.

For more information with network configuration options (such as that of streaming ports), please refer to Configuration > Network Settings. VIVOTEK also provides the automatic port forwarding feature as an NAT traversal function with the precondition that your router must support the UPnP port forwarding feature.

# **Software Installation**

Installation Wizard 2 (IW2), a software included in the product CD, helps you set up your Network Camera on the LAN.

1. Install IW2 under the Software Utility directory from the software CD. Double-click the IW2 shortcut on your desktop to launch the program.

2. The program will conduct an analysis of your network environment. After your network environment is analyzed, please click **Next** to continue the program.

📲 Installation. Winnel 2 - Materick Environment Andyres 🛛 📓	🖣 Lastallation, Winard 2 - Network Type 🛛 🛞
Installation Wizard 2	Installation Wizard 2
The wizard is analyzing your network environment. Please wait a moment.	Your network environment was analyzed as below. Private DHCP
Ent Groat	Cable:555 modem Router Router

- 3. The program will search for all VIVOTEK network devices on the same LAN.
- 4. After a brief search, the installer window will prompt. Click on the MAC and model name that matches the one printed on the product label. You can then double-click on the address to open a management session with the Network Camera.

# **Ready to Use**

- 1. A browser session with the Network Camera should prompt as shown below.
- 2. You should be able to see live video from your camera. You may also install the 32-channel recording software from the software CD in a deployment consisting of multiple cameras. For its installation details, please refer to its related documents.

# Auto Focus (for Motorized Lens Models only)

On the web console, visit the **Configuration** > **Image** > **Focus** window. Perform the Auto Focus function for best image focus.

Focus here refers to the **Remote Focus**, applicable to Network Cameras that are equipped with a stepping motor lens. The automated focus adjustment function eliminates the needs to physically adjust camera focus. In an outdoor deployment consisting of a large number of cameras, the auto focus function can be very helpful when these cameras become out of focus after days or weeks of operation. And that can easily result from the effects of natural forces, e.g., shrink and expand due to a wide range of operating temperatures and the vibration caused by wind.

# **Accessing the Network Camera**

This chapter explains how to access the Network Camera through web browsers, RTSP players, 3GPP-compatible mobile devices, and VIVOTEK recording software.

# **Using Web Browsers**

Use Installation Wizard 2 (IW2) to access the Network Cameras on LAN.

If your network environment is not a LAN, follow these steps to access the Network Camera:

- 1. Launch your web browser (e.g., Microsoft<sup>®</sup> Internet Explorer or Mozilla Firefox).
- 2. Enter the IP address of the Network Camera in the address field. Press Enter.
- 3. Live video will be displayed in your web browser.
- 4. If it is the first time installing the VIVOTEK network camera, an information bar will prompt as shown below. Follow the instructions to install the required plug-in on your computer.

### NOTE:

For Mozilla Firefox or Chrome users, your browser will use Quick Time to stream the live video. If you don't have Quick Time on your computer, please download it first, then launch the web browser.

- By default, the Network Camera is not password-protected. To prevent unauthorized access, it is highly recommended to set a password for the Network Camera. For more information about how to enable password protection, please refer to Security on page 89.
- If you see a dialog box indicating that your security settings prohibit running ActiveX<sup>®</sup> Controls, please enable the ActiveX<sup>®</sup> Controls for your browser.
- 1. Choose Tools > Internet Options > Security > Custom Level.

2. Look for Download signed ActiveX<sup>®</sup> controls; select Enable or Prompt. Click **OK**.

Security Settings	? 🗙
Settings:	
ActiveX controls and plug-ins     Download signed ActiveX controls     Disable     Enable     Prompt	
Download unsigned ActiveX controls     Disable     Enable     Prompt     Initialize and script ActiveX controls not marked as s     Disable     Enable     Prompt	afe V
Reset custom settings	
Reset to: Medium 🗸 Reset	
ОК Сал	el

*3.* Refresh your web browser, then install the ActiveX<sup>®</sup> control. Follow the instructions to complete installation.

# 

- Currently the Network Camera utilizes 32-bit ActiveX plugin. You CAN NOT open a management/view session with the camera using a 64-bit IE browser.
- If you encounter this problem, try execute the lexplore.exe program from C:\Windows\ SysWOW64. A 32-bit version of IE browser will be installed.
- On Windows 7, the 32-bit explorer browser can be accessed from here: C:\Program Files (x86)\Internet Explorer\iexplore.exe
- If you open a web session from the IW2 utility, a 32-bit IE browser will be opened.

- 1. The onscreen Java control can malfunction under the following situations: A PC connects to different cameras that are using the same IP address (or the same camera running different firmware versions). Removing your browser cookies will solve this problem.
- 2. If you encounter problems with displaying the configuration menus or UI items, try disable the Compatibility View on IE8 or IE9.

You may also press the F12 key to open the developer tools utility, and then change the Browser Mode to the genuine IE8 or IE9 mode.

4>		x

In the event of plug-in compatibility issues, you may try to uninstall the plug-in that was
previously installed.

# **Using RTSP Players**

To view the streaming media using RTSP players, you can use one of the following players that support RTSP streaming.

Quick Time Player

VLC media player

- 1. Launch the RTSP player.
- 2. Choose File > Open URL. A URL dialog box will pop up.
- 3. The address format is rtsp://<ip address>:<rtsp port>/<RTSP streaming access name for stream1 or stream2>

As most ISPs and players only allow RTSP streaming through port number 554, please set the RTSP port to 554. For more information, please refer to RTSP Streaming on page 80. For example:

Open URL	×
Enter an Internet URL to open:	
rtsp://192.168.5.151.554/live.sdp	<b>*</b>
	OK Cancel

4. The live video will be displayed in your player.

For more information on how to configure the RTSP access name, please refer to RTSP Streaming on page 80 for details.

# **Using 3GPP-compatible Mobile Devices**

To view the streaming media through 3GPP-compatible mobile devices, make sure the Network Camera can be accessed over the Internet. For more information on how to set up the Network Camera over the Internet, please refer to Setup the Network Camera over the Internet on page 14.

To utilize this feature, please check the following settings on your Network Camera:

- 1. Because most players on 3GPP mobile phones do not support RTSP authentication, make sure the authentication mode of RTSP streaming is set to disable. For more information, please refer to RTSP Streaming on page 80.
- 2. As the the bandwidth on 3G networks is limited, you will not be able to use a large video size. Please set the video streaming parameters as listed below.

For more information, please refer to Stream settings on page 62.

Video Mode	H.264
Frame size	176 x 144
Maximum frame rate	5 fps
Intra frame period	1S
Video quality (Constant bit rate)	40kbps

- 3. As most ISPs and players only allow RTSP streaming through port number 554, please set the RTSP port to 554. For more information, please refer to RTSP Streaming on page 80.
- 4. Launch the player on the 3GPP-compatible mobile devices (e.g., Quick Time).
- 5. Type the following URL commands into the player. The address format is rtsp://<public ip address of your camera>:<rtsp port>/<RTSP streaming access name for stream # with small frame size and frame rate>. For example:

Open URL		×
Enter an Internet URL to open:		
rtsp://192.168.4.147:554/live2.sdp		•
	ОК	Cancel

You can configure Stream #2 into the suggested stream settings as listed above for live viewing on a mobile device.

# Using VIVOTEK Recording Software

The product software CD also contains an ST7501 recording software, allowing simultaneous monitoring and video recording for multiple Network Cameras. Please install the recording software; then launch the program to add the Network Camera to the Channel list. For detailed information about how to use the recording software, please refer to the user's manual of the software or download it from http://www.vivotek.com.

- 1. If you forget the root (administrator) password for the camera, you can restore the camera defaults by pressing the reset button for longer than 5 seconds.
- 2. If DHCP is enabled in your network, and the camera cannot be accessed, run the IW2 utility to search the network. If the camera has been configured with fixed IP that does not comply with your local network, you may see its default IP 169.254.x.x. If you still cannot find the camera, you can restore the camera to its factory defaults.
- 3. If you change your network parameters, e.g., added a camera via a connection to a LAN card, re-start the IW2 utility.

# Main Page

This chapter explains the layout of the main page. It is composed of the following sections: VIVOTEK INC. Logo, Host Name, Camera Control Area, Configuration Area, Menu, and Live Video Window.

#### **VIVOTEK INC. Logo**

Click this logo to visit the VIVOTEK website.

#### **Host Name**

The host name can be customized to fit your needs. The name can be changed especially there are many cameras in your surveillance deployment. For more information, please refer to System on page 37.

#### **Camera Control Area**

<u>Video Stream</u>: This Network Camera supports multiple streams (streams 1 and 2) simultaneously. You can select any of them for live viewing. For more information about multiple streams, please refer to page 62 for detailed information.

<u>Manual Trigger</u>: Click to enable/disable an event trigger manually. Please configure an event setting on the Application page before you enable this function. A total of 3 event configuration can be configured. For more information about event setting, please refer to page 105. If you want to hide this item on the homepage, please go to **Configuration> System > Homepage Layout > General settings > Customized button** to deselect the "show manual trigger button" checkbox.

#### **Configuration Area**

<u>Client Settings</u>: Click this button to access the client setting page. For more information, please refer to Client Settings on page 31.

<u>Configuration</u>: Click this button to access the configuration page of the Network Camera. It is suggested that a password be applied to the Network Camera so that only the administrator can configure the Network Camera. For more information, please refer to Configuration on page 36.

Language: Click this button to choose a language for the user interface. Language options are available in: English, Deutsch, Español, Français, Italiano, 日本語, Português, 簡体中文, and 繁體中文. Please note that you can also change a language on the Configuration page; please refer to page 36.

#### **Hide Button**

You can click the hide button to hide or display the control panel.

#### **Resize Buttons**

ET Auto ET 100% ET 50% ET 25% .

Click the Auto button, the video cell will resize automatically to fit the monitor. Click 100% is to display the original homepage size. Click 50% is to resize the homepage to 50% of its original size. Click 25% is to resize the homepage to 25% of its original size.

#### **Live Video Window**

■ The following window is displayed when the video mode is set to H.264: H.264 Protocol and Media Options

<u>Video Title</u>: The video title can be configured. For more information, please refer to Video Settings on page 49.

<u>H.264 Protocol and Media Options</u>: The transmission protocol and media options for H.264 video streaming. For further configuration, please refer to Client Settings on page 31.

<u>Time</u>: Display the current time. For further configuration, please refer to Media > Image > Genral settings on page 49.

<u>Title and Time</u>: The video title and time can be stamped on the streaming video. For further configuration, please refer to Media > Image > General settings on page 54.

<u>PTZ Panel</u>: This Network Camera supports "digital" (e-PTZ) pan/tilt/zoom control, which allows roaming a smaller view frame within a large view frame. Please refer to PTZ settiings on page 102 for detailed information.

<u>Global View</u>: Click on this item to display the Global View window. The Global View window contains a full view image (the largest frame size of the captured video) and a floating frame (the viewing region of the current video stream). The floating frame allows users to control the e-PTZ function (Electronic Pan/ Tilt/Zoom). For more information about e-PTZ operation, please refer to E-PTZ Operation on page 102. For more information about how to set up the viewing region of the current video stream, please refer to page 102.

Note that the PTZ buttons on the panel are not operational unless you are showing only a portion of the full image. If the live view window is displaying the full view, the PTZ buttons are not functional.

<u>Video Control Buttons</u>: Depending on the Network Camera model and Network Camera configuration, some buttons may not be available.

Snapshot: Click this button to capture and save still images. The captured images will be displayed in a pop-up window. Right-click the image and choose **Save Picture As** to save it in JPEG (\*.jpg) or BMP (\*.bmp) format.

Digital Zoom: Click and uncheck "Disable digital zoom" to enable the zoom operation. The navigation screen indicates the part of the image being magnified. To control the zoom level, drag the slider bar. To move to a different area you want to magnify, drag the navigation screen.

Pause: Pause the transmission of the streaming media. The button becomes the Resume button after clicking the Pause button.

**Stop**: Stop the transmission of the streaming media. Click the **Resume** button to continue transmission.

Start MP4 Recording: Click this button to record video clips in MP4 file format to your computer. Press the Stop MP4 Recording button to end recording. When you exit the web browser, video recording stops accordingly. To specify the storage destination and file name, please refer to MP4 Saving Options on page 32 for details.

Volume: When the Mute function is not activated, move the slider bar to adjust the volume on the local computer.

Mute: Turn off the volume on the local computer. The button becomes the Mutio On button after clicking the Mute button.

**Talk**: Click this button to talk to people around the Network Camera. Audio will project from the external speaker connected to the Network Camera. Click this button again to end talking transmission.

Mic Volume: When the IV Mute function is not activated, move the slider bar to adjust the microphone volume on the local computer.

### NOTE:

- 1. For a megapixel camera, it is recommended to use monitors of the 24" size or larger, and are capable of 1600x1200 or better resolutions.
- 2. Below are the defaults for Audio settings:

For cameras with built-in microphone: Not Muted.

For cameras without built-in microphone: Muted.

To receive audio input from an external microphone, you may need to enable the audio input from Media > Audio. Refer to page 70 for more information.

Video Title

Title and Time

<u>Mute</u>: Turn off the Mic volume on the local computer. The button becomes the Mic On button after clicking the Mute button.

**Full Screen**: Click this button to switch to full screen mode. Press the "Esc" key to switch back to normal mode.

■ The following window is displayed when the video mode is set to MJPEG:

Video Control Buttons

-Time

<u>Video Title</u>: The video title can be configured. For more information, please refer to Media > Image on page 54.

<u>Time</u>: Display the current time. For more information, please refer to Media > Image on page 54.

<u>Title and Time</u>: Video title and time can be stamped on the streaming video. For more information, please refer to Media > Image on page 54.

<u>Video Control Buttons</u>: Depending on the Network Camera model and Network Camera configuration, some buttons may not be available.

Snapshot: Click this button to capture and save still images. The captured images will be displayed in a pop-up window. Right-click the image and choose **Save Picture As** to save it in JPEG (\*.jpg) or BMP (\*.bmp) format.

Digital Zoom: Click and uncheck "Disable digital zoom" to enable the zoom operation. The navigation screen indicates the part of the image being magnified. To control the zoom level, drag the slider bar. To move to a different area you want to magnify, drag the navigation screen.

Disable digital ptz		
Zoom Factor:	100%	
100%	400%	7-1

Start MP4 Recording: Click this button to record video clips in MP4 file format to your computer. Press the Stop MP4 Recording button to end recording. When you exit the web browser, video recording stops accordingly. To specify the storage destination and file name, please refer to MP4 Saving Options on page 32 for details.

**Full Screen**: Click this button to switch to full screen mode. Press the "Esc" key to switch back to normal mode.

# **Client Settings**

This chapter explains how to select the stream transmission mode and saving options on the local computer. When completed with the settings on this page, click **Save** on the page bottom to enable the settings.

#### H.264 Media Options

_	H.264 media options
	Mdeo and audio
	O Video only
	O Audio only

Select to stream video or audio data or both. This is enabled only when the video mode is set to H.264.

#### **H.264 Protocol Options**

H.264 Protocol Options
O UDP Unicast
O UDP Multicast
● TCP
OHTTP

Depending on your network environment, there are four transmission modes of H.264 streaming:

<u>UDP unicast</u>: This protocol allows for more real-time audio and video streams. However, network packets may be lost due to network burst traffic and images may be broken. Activate UDP connection when occasions require time-sensitive responses and the video quality is less important. Note that each unicast client connecting to the server takes up additional bandwidth and the Network Camera allows up to ten simultaneous accesses.

<u>UDP multicast</u>: This protocol allows multicast-enabled routers to forward network packets to all clients requesting streaming media. This helps to reduce the network transmission load of the Network Camera while serving multiple clients at the same time. Note that to utilize this feature, the Network Camera must be configured to enable multicast streaming at the same time. For more information, please refer to RTSP Streaming on page 80.

<u>TCP</u>: This protocol guarantees the complete delivery of streaming data and thus provides better video quality. The downside of this protocol is that its real-time effect is not as good as that of the UDP protocol.

<u>HTTP</u>: This protocol allows the same quality as TCP protocol without needing to open specific ports for streaming under some network environments. Users inside a firewall can utilize this protocol to allow streaming data through.

#### Two way audio

<ul> <li>Half-duplex</li> <li>Full-duplex</li> </ul>	 Two way audio
Full-duplex	e Half-duplex
	Full-duplex

<u>Half duplex</u>: Audio is transmitted from one direction at a time, e.g., from a PC holding a web console with the camera.

Full duplex: Audio is transmitted in both directions simultaneously.

#### **MP4 Saving Options**

MP4 saving opt	ions	
Folder:	C:\Record	Browse
File name prefix:	CLIP	
Add date and	time suffix to file name	

Users can record live video as they are watching it by clicking Start MP4 Recording on the main page. Here, you can specify the storage destination and file name.

<u>Folder</u>: Specify a storage destination on your PC for the recorded video files. The location can be changed.

<u>File name prefix</u>: Enter the text that will be appended to the front of the video file name. A specified folder will be automatically created on your local hard disk.

<u>Add date and time suffix to the file name</u>: Select this option to append the date and time to the end of the file name.

#### **Local Streaming Buffer Time**

Loc	cal streaming buffer time		
0	Millisecond		
		Save	

Due to the unsteady bandwidth flow, the live streaming may lag and not be very smoothly. If you enable this option, the live streaming will be stored temporarily on your PC's cache memory for a few seconds before being played on the live viewing window. This will help you see the streaming more smoothly. If you enter 3,000 Millisecond, the streaming will delay for 3 seconds.

#### **Joystick settings**

#### **Enable Joystick**

Connect a joystick to a USB port on your management computer. Supported by the plug-in (Microsoft's DirectX), once the plug-in for the web console is loaded, it will automatically detect if there is any joystick on the computer. The joystick should work properly without installing any other driver or software.

Then you can begin to configure the joystick settings of connected devices. Please follow the instructions below to enable joystick settings.

- 1. Select a detected joystick, if there are multiple, from the Selected joystick menu. If your joystick is not detected, if may be defective.
- 2. Click Calibrate or Configure buttons to configure the joystick-related settings.

Joystick settings	
Selected joystick: Macally AirStick	
Calibrate Configure buttons	
	Save

# NOTE:

- If you want to assign Preset actions to your joystick, the preset locations should be configured in advance in the Configuration > PTZ page.
- If your joystick is not working properly, it may need to be calibrated. Click the **Calibrate** button to open the Game Controllers window located in Microsoft Windows control panel and follow the instructions for trouble shooting. Use the Search panel on the Start menu to search for "Game Controller."
- The joystick will appear in the **Game Controllers** list in the Windows Control panel. If you want to check out for your devices, go to the following page: Start -> Control Panel -> Game Controllers.

Game Controllers	? 🛛

#### **Buttons Configuration**

In the Button Configuration window, the left column shows the actions you can assign, and the right column shows the functional buttons and assigned actions. The number of buttons may differ from different joysticks.

Please follow the steps below to configure your joystick buttons:

 Choosing one of the actions and click Assign will pop up a dialog. Then you can assign this action to a button by pressing the joystick button or select it from the drop-down list. For example: Assign Home (move to home position) to Button 1.

Suttons Configuration				×
Assigned Actions				
Actions		Buttons	Assigne	ed Actions

2. Select a corresponding action, such as Patrol or Preset#.

3. Click the **Assign** button to assign an action to the button. You can delete an association by selecting a button number, and then click the **Delete** button.

Repeat the process until you are done with the configuration of all preferred actions.

The buttons you define should appear on the button list accordingly.

4. Please remember to click the **Save** button on the Client settings page to preserve your settings.

# Configuration

Click **Configuration** on the main page to enter the camera setting pages. Note that only Administrators can access the configuration page.

VIVOTEK provides an easy-to-use user interface that helps you set up your network camera with minimal effort. In order to simplify the user interface, detailed information will be hidden unless you click on the function item. When you click on the first sub-item, the detailed information for the first sub-item will be displayed; when you click on the second sub-item, the detailed information for the second sub-item will be displayed and that of the first sub-item will be hidden.

The following is the interface of the main page:

VIVOTEK					
		Home	Client settings	Configuration	Language
	System > General settings

Each function on the configuration list will be explained in the following sections.

The Navigation Area provides access to all different views from the **Home** page (for live viewing), **Configuration** page, and multi-language selection.

# System > General settings

This section explains how to configure the basic settings for the Network Camera, such as the host name and system time. It is composed of the following two columns: System, and System Time. When finished with the settings on this page, click **Save** at the bottom of the page to enable the settings.

#### System

Host name:	Mega-Pixel Network Camera	
Turn off the LED indicator		

<u>Host name</u>: Enter a desired name for the Network Camera. The text will be displayed at the top of the main page, and also on the view cells of the ST7501 and VAST management software.

<u>Turn off the LED indicators</u>: If you do not want others to notice the network camera is in operation, you can select this option to turn off the LED indicators.

#### System time

- System tir	ne
Time zone:	GMT+08:00 Beijing, Chongging, Hong Kong, Kuala Lumpur, Singapore, Taipei 💌
Note: You default va	can upload your daylight saving time rules on <u>Maintenance</u> page or use the camera lue.
Keep cu	rrent date and time
Synchro	nize with computer time
🔘 Manual	
Automat	ic
	Save

<u>Keep current date and time</u>: Select this option to preserve the current date and time of the Network Camera. The Network Camera's internal real-time clock maintains the date and time even when the power of the system is turned off.

<u>Synchronize with computer time</u>: Select this option to synchronize the date and time of the Network Camera with the local computer. The read-only date and time of the PC is displayed as updated.

<u>Manual</u>: The administrator can enter the date and time manually. Note that the date and time format are [yyyy/mm/dd] and [hh:mm:ss].

<u>Automatic</u>: The Network Time Protocol is a protocol which synchronizes computer clocks by periodically querying an NTP Server.

<u>NTP server</u>: Assign the IP address or domain name of the time-server. Leaving the text box blank connects the Network Camera to the default time servers. The precondition is that the camera must have the access to the Internet.

<u>Update interval</u>: Select to update the time using the NTP server on an hourly, daily, weekly, or monthly basis.

<u>Time zone</u> : Select the appropriate time zone from the list. If you want to upload Daylight Savings Time rules, please refer to **System > Maintenance > Import/ Export files** on page 46 for details.

# System > Homepage layout

This section explains how to set up your own customized homepage layout.

#### **General settings**

This column shows the settings of your hompage layout. You can manually select the background and font colors in Theme Options (the second tab on this page). The settings will be displayed automatically in this Preview field. The following shows the homepage using the default settings:

Hide Powered by VIVOTEK

■ Hide Powered by VIVOTEK: If you check this item, it will be removed from the homepage.

#### Logo graph

Here you can change the logo that is placed at the top of your homepage.

— Logo graph —		
A customized logo (Gif, J 160x50 pixels to replace		ed for main page. It will be resized to
O Default	Custom	
	m	Browse Upload
Logo link: http://www.vivot	ek.com	

Follow the steps below to upload a new logo:

- 1. Click **Custom** and the Browse field will appear.
- 2. Select a logo from your files.
- 3. Click **Upload** to replace the existing logo with a new one.
- 4. Enter a website link if necessary.
- 5. Click Save to enable the settings.

Customized button

If you want to hide manual trigger buttons on the homepage, please uncheck this item. This item is checked by default.

Customized button

 Image: Show manual trigger button

#### **Theme Options**

Here you can change the color of your homepage layout. There are three types of preset patterns for you to choose from. The new layout will simultaneously appear in the **Preview** filed. Click **Save** to enable the settings.

- Follow the steps below to set up the customed homepage:
- 1. Click **Custom** on the left column.
- 2. Click the field where you want to change the color on the right column.

3. The palette window will pop up as shown below.

Hex:	#000000	o <b>2</b>	Hex:	#23538A
Red:	0	1	Red:	35
Green:	0		Green:	83
Blue:	0		Blue:	138
Hue:	0		Hue:	212
Saturatio	n: 0		Saturation:	74.6
Value:	0		Value:	54.1
	Select		4 Se	lect

- 4. Drag the slider bar and click on the left square to select a desired color.
- 5. The selected color will be displayed in the corresponding fields and in the **Preview** column.
- 6. Click **Save** to enable the settings.

### System > Logs

This section explains how to configure the Network Camera to send the system log to a remote server as backup.

g server set	Log server settings		
	Enable remote log		
	IP address:		
	port:	514	
			Save

Follow the steps below to set up the remote log:

- 1. Select Enable remote log.
- 2. In the IP address text box, enter the IP address of the remote server.
- 2. In the port text box, enter the port number of the remote server.
- 3. When completed, click **Save** to enable the setting.

You can configure the Network Camera to send the system log file to a remote server as a log backup. Before utilizing this feature, it is suggested that the user install a log-recording tool to receive system log messages from the Network Camera. An example is Kiwi Syslog Daemon. Visit http://www.kiwisyslog. com/kiwi-syslog-daemon-overview/.

## System > Maintenance

This chapter explains how to restore the Network Camera to factory default, upgrade firmware version, etc.

#### General settings > Upgrade firmware

 Upgrade firmware	9		
Select firmware file:		Browse	Upgrade

This feature allows you to upgrade the firmware of your Network Camera. It takes a few minutes to complete the process.

#### Note: Do not power off the Network Camera during the upgrade!

Follow the steps below to upgrade the firmware:

- 1. Download the latest firmware file from the VIVOTEK website. The file is in .pkg file format.
- 2. Click **Browse...** and locate the firmware file.
- 3. Click **Upgrade**. The Network Camera starts to upgrade and will reboot automatically when the upgrade completes.

If the upgrade is successful, you will see "Reboot system now!! This connection will close". After that, reaccess the Network Camera.

The following message is displayed when the upgrade has succeeded.

The following message is displayed when you have selected an incorrect firmware file.

Starting firmware upgrade Do not power down the server during the upgrade. The server will restart automatically after the upgrade is completed. This will take about 1 - 5 minutes. Wrong PKG file format Unpack fail
--

#### **General settings > Reboot**

Reboot -		
		Reboot

This feature allows you to reboot the Network Camera, which takes about one minute to complete. When completed, the live video page will be displayed in your browser. The following message will be displayed during the reboot process.

The device is rebooting now. Your browser will reconnect to http://192.168.5.151:80/ If the connection fails, please manually enter the above IP address in your browser.

If the connection fails after rebooting, manually enter the IP address of the Network Camera in the address field to resume the connection.

#### **General settings > Restore**

Restore —			
Restore all set	ttings to factory default exc	ept settings in	
Network	Daylight saving time	🗌 Custom language 🗌 VADP 🗌	Focus position
			Restore

This feature allows you to restore the Network Camera to factory default settings.

<u>Network</u>: Select this option to retain the Network Type settings (please refer to Network Type on page 72).

<u>Daylight Saving Time</u>: Select this option to retain the Daylight Saving Time settings (please refer to Import/Export files below on this page).

<u>Custom Language</u>: Select this option to retain the Custom Language settings.

<u>VADP</u>: Retain the VADP modules (3rd-party software stored on the SD card) and related settings.

<u>Focus position</u>: (Remote focus models only) Retain the lens focus position using the previously saved position parameters.

If none of the options is selected, all settings will be restored to factory default. The following message is displayed during the restoring process.

The device is rebooting now. Your browser will reconnect to http://192.168.5.151:80/ If the connection fails, please manually enter the above IP address in your browser.

#### **Import/Export files**

This feature allows you to Export / Update daylight saving time rules, custom language file, configuration file, and server status report.

neral settings Import/Export files	
Export files	
Export daylight saving time configuration file	Export
Export language file	Export
Export configuration file	Export
Export server status report	Export
Upload files	
Update daylight saving time rules:	Browse Upload
Update custom language file:	Browse Upload
Upload configuration file:	Browse Upload

Export daylight saving time configuration file: Click to set the start and end time of DST (Daylight Saving).

Follow the steps below to export:

- 1. In the Export files column, click **Export** to export the daylight saving time configuration file from the Network Camera.
- 2. A file download dialog will pop up as shown below. Click **Open** to review the XML file or click **Save** to store the file for editing.

File Dov	vnload 🛛 🔀
Do yo	u want to open or save this file?
	Name: config_dst.xml Type: XML Document, 11.1 KB From: 192.168.5.151
	Open Save Cancel
1	While files from the Internet can be useful, some files can potentially harm your computer. If you do not trust the source, do not open or save this file. <u>What's the risk?</u>

3. Open the file with Microsoft<sup>®</sup> Notepad and locate your time zone; set the start and end time of DST. When completed, save the file.

In the example below, DST begins each year at 2:00 a.m. on the second Sunday in March and ends at 2:00 a.m. on the first Sunday in November.

🛱 config_dst - Notepad	
File Edit Format View Help	1.00000
<day></day> <weekinmonth>First</weekinmonth> <dayofweek>Sunday</dayofweek> <hour>2</hour> 	-
<fimezone id="-240" name="(GMT-06:00) Central Time (US and Canada)"> <fimezone id="-240" name="(GMT-06:00) Central Time (US and Canada)"> <finttimes <first imes<br=""><fortimes <doays< fortimes<br=""><doays< doays<br=""></doays<></doays<></fortimes </first></finttimes <fortimes <fortimes <fortimes <fortimes <doays< fortimes<br=""><fortimes <doays< fortimes<br=""><fortimes <fortimes </fortimes </fortimes </doays<></fortimes <td>-</td></doays<></fortimes </fortimes </fortimes </fortimes </fimezone></fimezone>	-
<timezone id="-241" name="(GMT-06:00) Mexico City"></timezone>	*
	14

Update daylight saving time rules: Click Browse... and specify the XML file to update.

If the incorrect date and time are assigned, you will see the following warning message when uploading the file to the Network Camera.

🖻 config_dst - Notepad	🛛 🗐 🔯 🚽 http://197.168.5.121/cgi-bin/admin/upload.cgi - Microsoft Int.,, 👘 🗆 🔯
File Edit Format View Help	
<pre>cDays</pre> characteristic/weekinwonths cDayofweekissunday <td>Invalid «Month» value in TimeZone id: -240</td>	Invalid «Month» value in TimeZone id: -240
  <timezone id+"-241"="" name="(GMT-06:00) Mexico City"> &lt;</timezone>	3

The following message is displayed when attempting to upload an incorrect file format.

<u>Export language file</u>: Click to export language strings. VIVOTEK provides nine languages: English, Deutsch, Español, Français, Italiano, 日本語, Português, 簡体中文, and 繁體中文.

Update custom language file: Click Browse... and specify your own custom language file to upload.

Export configuration file: Click to export all parameters for the device and user-defined scripts.

<u>Update configuration file</u>: Click **Browse...** to update a configuration file. Please note that the model and firmware version of the device should be the same as the configuration file. If you have set up a fixed IP or other special settings for your device, it is not suggested to update a configuration file.

<u>Export server staus report</u>: Click to export the current server status report, such as time, logs, parameters, process status, memory status, file system status, network status, kernel message ... and so on.

 If a firmware upgrade is accidentally disrupted, say, by a power outage, you still have a last resort method to restore normal operation. See the following for how to bring the camera back to work:

Applicable scenario:

- (a) Power disconnected during firmware upgrade.
- (b) Unknown reason causing abnormal LED status, and a Restore cannot recover normal working condition.

You can use the following methods to activate the camera with its backup firmware:

- (a) Press and hold down the reset button for at least one minute.
- (b) Power on the camera until the Red LED blinks rapidly.
- (c) After boot up, the firmware should return to the previous version before the camera hanged. (The procedure should take 5 to 10 minutes, longer than the normal boot-up process). When tthis process is completed, the LED status should return to normal.

## Media > Image

This section explains how to configure the image settings of the Network Camera. The Focus window is available only for models that come with motorized lens.

#### Image settings Exposure Focus Privacy mask General settings **General settings** Video settings Video title Show timestamp and video title in video and snapshots Position of timestamp and video title on image: ~ Top Timestamp and video title font-size: 30 🗸 Video font (.ttf): Upload Default 🗸 Color: O B/W Color Power line frequency: Video orientation: Flip Mirror Rotate

#### Video title

<u>Show\_timestamp\_and video\_title\_in\_video\_and\_snapshots</u>: Enter a name that will be displayed on the title bar of the live video as the picture shown below. A zoom indicator will be displayed on the Home page when you zoom in/out on the live viewing window as shown below. You may zoom in/ out on the image by scrolling the mouse wheel inside the live viewing window, and the maximum zoom in will be up to 4 times.

<u>Position of timestamp and video title on image</u>: Select to display time stamp and video title on the top or at the bottom of the video stream.

<u>Timestamp and video title font size</u>: Select the font size for the time stamp and title.

<u>Video font (.ttf)</u>: You can select a True Type font file for the display of textual messages on video.

<u>Color</u>: Select to display color or black/white video streams.

<u>Power line frequency</u>: Set the power line frequency consistent with local utility settings to eliminate image flickering associated with fluorescent lights. Note that after the power line frequency is changed, you must disconnect and reconnect the power cord of the Network Camera in order for the new setting to take effect.

<u>Video orientation</u>: Flip - vertically reflect the display of the live video; Mirror - horizontally reflect the display of the live video. Select both options if the Network Camera is installed upside-down (e.g., on the ceiling) to correct the image orientation. Please note that if you have preset locations, those locations will be cleared after flip/mirror setting.

#### Rotate -

Rotate Degrees 90

The rotation here indicates clockwise rotation. Rotation can be applied with flip, mirror, and physical lens rotation (see below) settings to adapt to different mounting locations.

The figures in the illustration are shown in a consecutive order.

The camera may be installed on a vertical, side-facing, or tilted surface in order to accommodate the interior or exterior design of a building. The interior of a building can be shaped as a narrow rectangular space, such as corridor. The conventional HD image, such as that of a 16:9 aspect ratio, will be incongruous with its wide horizontal view. With video rotation, the camera can more readily cover the field of view on a tall and narrow scene.

Day/Night Settings -	Day/Night settings		
	Switch to B/W in night mode		
	Turn on external IR illuminator in night mode		
	V Turn on built-in IR illuminator in night mode		
	Smart IR		
	IR cut filter:	Day mode	•

#### Switch to B/W in night mode

Select this to enable the Network Camera to automatically switch to Black/White during night mode.

#### Turn on external IR illuminator in night mode

Select this to turn on the external IR illuminator when the camera detects low light condition and enters the night mode. A Digital Output connection to external IR is needed.

#### Turn on built-in IR illuminator in night mode

Select this to turn on the camera's onboard IR illuminator when the camera detects low light condition and enters the night mode.

#### Smart IR

(IMPORTANT: Smart IR is available when the external/built-in IR option is enabled)

When enabled, the camera automatically adjust the IR projection to adjacent objects in order to avoid over-exposure in the night mode.

The Smart IR function is more beneficial when the spot of intrusions or an object of your interest is close to the lens and the IR lights. For example, if an intruder has a chance of getting near the range of 3 meters, Smart IR can effectively reduce the over-exposure. For a surveillance area at a greater distance, e.g., 5 meters or farther away, the Smart IR function may not bring as significant benefits as in close range.

Smart IR disabled; distance: 5M

Smart IR disabled; distance: 3M

Smart IR enabled; distance: 5M

Smart IR enabled; distance: 3M

If there is an object in close proximity, the IR lights reflected back from it can mislead the Smart IR's calculation of light level. To solve this issue, you can place an "Exposure Exclude" window on an unavoidable object in the Exposure setting window. See page 57 for how to do it.

You can also configure the "Exposure Exclude" window in a night mode "Profile" setting so that your day time setting is not affected.

#### IR cut filter

With a removable IR-cut filter, this Network Camera can automatically remove the filter to let IR light enter the light sensor during low light conditions.

Auto mode

The Network Camera automatically removes the filter by judging the level of ambient light.

Day mode

In day mode, the Network Camera switches on the IR cut filter at all times to block infrared light from reaching the sensor so that the colors will not be distorted.

Night mode

In night mode, the Network Camera switches off the IR cut filter at all times for the sensor to accept infrared light, thus helping to improve low light sensitivity.

Synchronize with digital input

The Network Camera automatically removes the IR cut filter when a Digital Input is triggerred. For example, the digital input can come from a housing that is equipped with IR illumination and control circuits such as VIVOTEK's AE-241.

#### Schedule mode

The Network Camera switches between day mode and night mode based on a specified schedule. Enter the start and end time for day mode. Note that the time format is [hh:mm] and is expressed in 24-hour clock time. By default, the start and end time of day mode are set to 07:00 and 18:00.

Light sensor sensitivity

Tune the responsiveness of the IR filter to lighting conditions as Low, Normal, or High.

When completed with the settings on this page, click **Save** to enable the settings.

#### Image settings

On this page, you can tune the White balance and Image adjustment.

White balance: Adjust the value for the best color temperature.

- You may follow the steps below to adjust the white balance to the best color temperature.
- 1. Place a sheet of paper of white or cooler-color temperature color, such as blue, in front of the lens, then allow the Network Camera to automatically adjust the color temperature.
- 2. Click the **On** button to **Fix current value** and confirm the setting while the white balance is being measured.
- You may also manually tune the color temperature by pulling the RGain and BGain slide bars.

#### Image Adjustment

- Brightness: Adjust the image brightness level, which ranges from 0% to 100%.
- Contrast: Adjust the image contrast level, which ranges from 0% to 100%.
- Saturation: Adjust the image saturation level, which ranges from 0% to 100%.
- Sharpness: Adjust the image sharpness level, which ranges from 0% to 100%.
- Gamma curve: Adjust the image sharpness level, which ranges from 0 to 0.45. You may let firmware Optimize your display or select a value to change the preferred level of Gamma correction towards higher contrast or towards the higher luminance for detailed expression for both dark and lighted areas of an image.

<u>Defog</u>: Defog helps improve the visibility quality of captured image in poor weather conditions such as smog, fog, or smoke.

#### Noise reduction

Enable noise reduction: Check to enable noise reduction in order to reduce noises and flickers in image. This applies to the onboard 3D Noise Reduction feature. Use the pull-down menu to adjust the reduction strength. Note that applying this function to the video channel will consume system computing power.

3D Noise Reduction is mostly applied in low-light conditions. When enabled in a low-light condition with fast moving objects, trails of after-images may occur. You may then select a lower strength level or disable the function.

Note that the **Preview** button has been cancelled, all changes made to image settings is directly shown on screen. You can click **Restore** to recall the original settings without incorporating the changes. When completed with the settings on this page, click **Save** to enable the setting. You can also click on **Profile mode** to adjust all settings above in a tabbed window for special lighting conditions.

Normal light mode	Profile mode		
✓ Enable to apply	those settings :	at	
	ulese settiliys a	a	
Night mode	○ Schedule	e mode	

<u>Enable to apply these settings at</u>: Select the mode this profile to apply to: Day mode, Night mode, or Schedule mode. Please manually enter a range of time if you choose Schedule mode. Then check **Save** to take effect.

#### **Exposure**

On this page, you can set the Exposure measurement window, Exposure level, Exposure mode, Exposure time, Gain control, and Day/Night mode settings. You can configure two sets of Exposure settings: one for normal situations, the other for special situations, such as the day/night/schedule mode.

	General settings	Image settings.	Exposure	Focus	Privacy mask	
	11 A M 10 M 10					
			Ż			A LESS
Sensor Setting 2:	Normal light m	ode Profile mod	le l	- m - [[]		
	10.14.24.26.26	ement window w OCustom	OBLC			^
	- Exposure	e control	0 🗸			
Sensor Setting 1: For normal situations	Exposure: Ins mode:		Auto	- 		
	WDR	le WDR enhanced				
			Restore		Save	

<u>Measurement Window</u>: This function allows users to set measurement window(s) for low light compensation. For example, where low-light objects are posed against an extremely bright background. You may want to exclude the bright sunlight shining through a building's corridor.

- Full view: Calculate the full range of view and offer appropriate light compensation.
- Custom: This option allows you to manually add customized windows as inclusive or exclusive regions. A total of 10 windows can be configured. Please refer to the next page for detailed illustration.

The inclusive window refers to the "weighed window"; the exclusive window refers to "ignored window". It adopts the weighed averages methodology to calculate the value. The inclusive windows have a higher priority. You can overlap these windows, and, if you place an exclusive window within a larger inclusive window, the exclusive part of the overlapped windows will be deducted from the inclusive window. An exposure value will then be calculated out of the remaining of the inclusive window.

BLC (Back Light Compensation): This option will automatically add a "weighted region" in the middle of the window and give the necessary light compensation.

#### Exposure control:

Exposure level: You can manually set the Exposure level, which ranges from -2.0 to +2.0 (dark to bright). You can click and drag the semi-circular pointers on the Exposure time and Gain control slide bars to specify a range of shutter time and Gain control values within which the camera can automatically tune to an optimal imaging result. You may prefer a shorter shutter time to better capture moving objects, while a faster shutter reduces light and needs to be compensated by the electrical brightness gains.

#### Exposure mode:

When the Manual mode is selected, you can click and drag the semi-circular pointers on the **Exposure time** and **Gain control** slide bars to specify a range of shutter time and Gain control values within which the camera can automatically tune to an optimal imaging result. You can also configure the iris size to control the amount of light. For example, you may prefer a shorter shutter time to better capture moving objects, while a faster shutter reduces light and needs to be compensated by electrical brightness gains.

#### - Flickerless:

Fixed iris models can encounter image rolling band issues when operating under incongrous power line frequency with fluorescent lights. To solve the problem, the Flickerless mode can limit the exposure time to  $1/120 \sim 1/5$  second. For the Auto iris models, when the exposure time is limited to  $1/120 \sim 1/5$  second, iris size is automatically adjusted, and that the image brightness is appropriately adjusted. Although the chance is rare, for Fixed iris models, when the exposure time is limited to  $1/120 \sim 1/5$  second, they may encounter image over-exposure. If the Flickerless option is selected, and users discover over-exposure from the live view, they can disable the Flickerless option.

**Auto**: If you set Exposure mode as **Auto**, the Exposure time and Gain control will not be configurable since the sensor library will automatically adjust the value according to the ambient light. Then you can configure iris mode as "indoor" or "outdoor" to reach the best image quality.

■ Iris mode: Select Indoor or Outdoor iris mode to adapt to the installation. The preset iris aperture setting will apply. Note that on a fixed lens model, this option is not configurable.

You can click **Restore** to recall the original settings without incorporating the changes. When completed with the settings on this page, click **Save** to enable the settings.

If you want to configure another sensor setting for day/night/schedule mode, please click **Profile** to open the Profile of exposure settings page as shown below.

<u>Activated period</u>: Select the mode this profile to apply to: Day mode, Night mode, or Schedule mode. Please manually enter a range of time if you choose Schedule mode. Then click **Save** for the configuration to take effect.

Please follow the steps below to set up a profile:

- 1. Select the **Profile mode** tab.
- 2. Select the applicable mode: Night mode or Schedule mode. Please manually enter a range of time if you choose Schedule mode.
- 3. Configure Exposure control settings in the folowing columns. Please refer to previous dicussions for detailed information.
- 4. Click **Save** to enable the setting and click **Close** to exit the page.

Note that when the **WDR Pro** function is enabled, the Measurement window is not configurable.

#### WDR Pro:

This refers to the Wide Dynamic Range function that enables the camera to capture details in a high contrast environment. Use the checkbox to enable the function, and use the slide bar to select the strength of the WDR Pro functionality, depending on the lighting condition at the installation site. You can select a higher effect when the contrast is high (between the shaded area and the light behind the objects).

<u>Enable WDR enhanced</u>: This function allows users to identify more image details with an extreme contrast from an object of interest with one shadowed side against a bright background, e.g., an entrance. You may select the **Enable WDR enhanced** checkbox, and then adjust the strength (low, medium, high) to reach the best image quality.

#### **Focus** (For models that come with a motorized lens)

Focus here refers to the **Remote Focus**, and is applicable to Network Cameras that are equipped with stepping motor lens. The automated focus adjustment function eliminates the needs to physically adjust camera focus. In an outdoor deployment consisting of a large number of cameras, the auto focus function can be very helpful when these cameras become out of focus after days or weeks of operation. And that can easily result from the effects of natural forces, e.g., shrink and expand due to a wide range of operating temperatures and the vibration caused by wind.

Below is the procedure to perform the automated Focus function:

- 1. Select from the bottom of the screen whether you want to perform focus adjustment on the **Full view** or within a **Custom** focus window. You can create a custom window and click and drag the window to a desired position on screen.
- 2. It is recommended to **Reset** to the default back focus position of the sensor board.
- 3. You can use the **Open iris** checkbox (default) to increase the iris size for a better focus adjustment result.
- 4. Click to select the **Fully-opened iris** or the **Full-range scan** buttons. When a full-range scan is selected, a full-range scan through the camera's entire focal length can take about 30 to 80 seconds. If not, the auto focus scan will only go through the length where optimal focus may occur, and that takes about 15 to 20 seconds. In theory, best results of the auto scan can be acquired when the camera's iris is fully open.

5. Wait for the scan to complete. After a short while, the clearest image obtained should be displayed and the optimal focus range achieved. Use the arrow marks on the sides to fine-tune the focus if you are not satisfied with the results. You may still need to use the arrow marks to fine-tune the focus depending on the live image on your screen. ">" means moving from wide to tele end; and "<" tele to wide.

The methodology of using the Resize Buttons at the upper left corner of the streaming window is the same as that on the home page.

#### Focus window:

By default, the optimal focus is found on a full view window. You may designate a custom window within your current field of view to acquire the best focus out of it. However, you can not place a focus window on a distant background, e.g., a hall way that stretches away for 3 meters or farther. Doing so you will not benefit from the Focus window function.

- **Full view**: The focus tuning takes place by referring to the full view.
- Custom: You can create a focus window and drag it to a place of interest in your view window. Note that it is recommended to use this function only when you have a solid object in your view window that is showing a consistent color or texture. This function will not take effect if you set the focus window on a distant background.

#### **Privacy mask**

Click **Privacy Mask** to open the settings page. On this page, you can block out sensitive zones to address privacy concerns.

Enable privacy mask

- To set the privacy mask windows, follow the steps below:
- 1. Click **New** to add a new window.
- 2. You can use 4 mouse clicks to create a new masking window, which is recommended to be at least twice the size of the object (height and width) you want to cover.
- 3. Enter a Window Name and click **Save** to enable the setting.
- 4. Click on the **Enable privacy mask** checkbox to enable this function.

# NOTE:

- ▶ Up to 5 privacy mask windows can be set up on the same screen.
- ► If you want to delete the privacy mask window, please click the 'x' mark on the side of window name.

# Media > Video

#### Mode (Available on 5MP resolution models)

Mode	Stream
	S-Megapixel (4:3) (MAX 15fps)
	1080P Full HD (16:9) (MAX 30fps)

You can select different resolutions, 5 megapixel at the max. of 15fps and a lower 1080P Full HD resolution at a higher 30fps frame rate, with different aspect ratios, 4:3 or 16:9 for the video streams. Note that changing the FOV will erase your preset points, Motion detection, exposure window, and privacy masks settings.

# Mode Stream <sup>§</sup> Video settings for stream 1 <sup>§</sup> Video settings for stream 2 <sup>§</sup> Video settings for stream 3 <sup>§</sup> Video settings for stream 3 <sup>§</sup> Video settings for stream 4 <sup>§</sup> Video settings for st

This Network Camera supports multiple streams with frame sizes ranging from 176 x 144 to 1920 x 1080 pixels (2MP models). The 5MP model supports a maximum resolution of 2560 x 1920.

The definition of multiple streams:

- Stream 1: Users can define the "Region of Interest" (viewing region) and the "Output Frame Size" (size of the live view window).
- Stream 2: The default frame size for Stream 2 is set to the 1280 x 720.
- Stream 3: The default frame size for Stream 3 is set to the 640 x 480.
- Stream 4: The default frame size for Stream 3 is set to the 1920 x 1080, and the Viewing Window function is not available for stream 4.

Click **Viewing Window** to open the viewing region settings page. On this page, you can configure the **Region of Interest** and the **Output Frame Size** for a video stream. For example, you can crop only a portion of the image that is of your interest, and thus save the bandwidth needed to transmit the video stream. As the picture shown below, the area of your interest in a parking lot should be the vehicles. The blue sky is of little value for the surveillance purpose.

Please follow the steps below to set up the configurations of a video stream:

- 1. Select a stream for which you want to set up the viewing region.
- 2. Select a **Region of Interest** from the drop-down list. The floating frame, the same as the one in the Global View window on the home page, will resize accordingly. If you want to set up a customized viewing region, you can also resize and drag the floating frame to a desired position with your mouse.
- 3. Choose a proper **Output Frame Size** from the drop-down list according to the size of your monitoring device.

All the items in the "Region of interest" should not be larger than the "Output Frame Size" (current maximum resolution).

#### The parameters of the multiple streams:

	Region of Interest	Output frame size	
Stream 1	1920 X 1080 ~ 176 x 144 (Selectable)	1920 X 1080 ~ 176 x 144 (Selectable)	
Stream 2	1920 X 1080 ~ 176 x 144 (Selectable)	1920 X 1080 ~ 176 x 144 (Selectable)	support resolutions up
Stream 3	1920 X 1080 ~ 176 x 144 (Selectable)	1920 X 1080 ~ 176 x 144 (Selectable)	to 2560x1920.
Stream 4	Fixed	Fixed	

When completed with the settings in the Viewing Window, click **Save** to enable the settings and click **Close** to exit the window. The selected **Output Frame Size** will immediately be applied to the **Frame size** of each video stream. Then you can go back to the home page to test the e-PTZ function. For more information about the e-PTZ function, please refer to page 102.

Click the stream item to display the detailed information. The maximum frame size will follow your settings in the above Viewing Window sections.

This Network Camera provides a real-time H.264 or MJPEG compression standard (Dual Codec) for real-time viewing. If the H.264 mode is selected, the video is streamed via RTSP protocol. There are several parameters through which you can adjust the video performance:

inormanice.	H.264		
	Frame size:		1920x1080 ¥
	Maximum fra	ame rate:	30 fps 🗸 🗸
	intra frame p	eriod:	15 🗸

	Cons	stant bit rate:	
	Tan	get bit rate:	4 Mbps 🗸
	Pol	icy.	Frame rate priority
	Fixed	f quality:	
	🔿 Sma	rt stream:	
	⊖ JPEG		

Frame size

You can set up different video resolutions for different viewing devices. For example, set a smaller frame size and lower bit rate for remote viewing on mobile phones and a larger video size and a higher bit rate for live viewing on web browsers, or recording the stream to an NVR. Note that a larger frame size takes up more bandwidth.

Maximum frame rate - The 5MP resolution mode supports the max. of 15fps. This limits the maximum refresh frame rate per second. Set the frame rate higher for smoother video quality and for recognizing moving objects in the field of view. If the power line frequency is set to 50Hz, the frame rates are selectable at 1fps, 2fps, 3fps, 5fps, 8fps, 10fps, 15fps, 20fps, and 25fps. If the power line frequency is set to 60Hz, the frame rates are selectable at 1fps, 2fps, 3fps, 5fps, 8fps, 10fps, 15fps, 20fps, 25fps, and 30fps. You can also select **Customize** and manually enter a value.

The frame rate will decrease if you select a higher resolution.

■ Intra frame period

Determine how often for firmware to plant an I frame. The shorter the duration, the more likely you will get better video quality, but at the cost of higher network bandwidth consumption. Select the intra frame period from the following durations: 1/4 second, 1/2 second, 1 second, 2 seconds, 3 seconds, and 4 seconds.

Video quality

Constant bit rate:

<u>Constant bit rate</u>: A complex scene generally produces a larger file size, meaning that higher bandwidth will be needed for data transmission. The bandwidth utilization is configurable to match a selected level, resulting in mutable video quality performance. The bit rates are selectable at the following rates: 20Kbps, 30Kbps, 40Kbps, 50Kbps, 64Kbps, 128Kbps, 256Kbps, 512Kbps, 768Kbps, 1Mbps, 2Mbps, 3Mbps, 4Mbps, 6Mbps, 8Mbps, 10Mbps, 12Mbps, 14Mbps, ~ to 32Mbps. You can also select Customize and manually enter a value up to 40Mbps.

- Target bit rate: select a bit rate from the pull-down menu. The bit rate ranges from 20kbps to a maximum of 16Mbps. The bit rate then becomes the Average or Upper bound bit rate number. The Network Camera will strive to deliver video streams around or within the bit rate limitation you impose.

- Policy: If Frame Rate Priority is selected, the Network Camera will try to maintain the frame rate per second performance, while the image quality will be compromised. If Image quality priority is selected, the Network Camera may drop some video frames in order to maintain image quality.

<u>Fixed quality</u>: On the other hand, if **Fixed quality** is selected, all frames are transmitted with the same quality; bandwidth utilization is therefore unpredictable. The video quality can be adjusted to the following settings: Medium, Standard, Good, Detailed, and Excellent. You can also select **Customize** and manually enter a value.

Maximum bit rate: With the guaranteed image quality, you might still want to place a bit rate limitation to control the size of video streams for bandwidth and storage concerns. The configurable bit rate starts from 1Mbps to 40Mbps.

You may also manually enter a bit rate number by selecting the **Customized** option.

 <u>Smart stream</u>: Smart stream effectively reduces the quality of the whole or the non-interested areas on a screen and therefore reduces the bandwidth consumed.

You can manually specify the video quality for the foreground and the background areas.

Smart stream:	
Foreground quality:	Good 🗸
Background quality:	Medium 🗸
Maximum bit rate:	40 Mbps 🗸 🗸
Mode:	Hybrid 🗸

#### Manual window setting

Select an operation mode if Smart stream is preferred.

- Auto tracking: The Auto tracking mode configures the whole screen into the background area. The video quality of part of the screen returns to normal when one or more objects move in that particular area. The remainder of the screen where there are no moving objects (no pixel changes) will still be transmitted in low-quality format.
- Manual: The Manual mode allows you to configure 3 ROI windows (the Foreground areas) on the screen. Areas not included in any ROI windows will be considered as the Background areas. The details in the ROI areas will always be transmitted in a higher-quality video format.

As illustrated below, the upper screen may contain little details of your interest, while the sidewalk on the lower screen is included in an ROI window.

As the result, the lower screen is constantly displayed in high details, while the upper half is transmitted using a lower-quality format. Although the upper half is transmitted using a lower quality format, you still have an awareness of what is happening on the whole screen.

- **Hybrid**: The major difference between the "Manual" mode and the "Hybrid" mode is that:

In the "**Hybrid**" mode, any objects entering the background area will restore the video quality of the moving objects and the area around them. The video quality of the associated background area is immediately restored to normal to cover the moving objects.

In the "**Manual**" mode, the background area is always transmitted using a low-quality format regardless of the activities inside.

You should also select the Maximum bit rate from the pull-down menu as the threshold to contain the bandwidth consumption for both the high- and low-quality video sections in a smart stream.

If **JPEG** mode is selected, the Network Camera sends consecutive JPEG images to the client, producing a moving effect similar to a filmstrip. Every single JPEG image transmitted guarantees the same image quality, which in turn comes at the expense of variable bandwidth usage. Because the media contents are a combination of JPEG images, no audio data is transmitted to the client. There are three parameters provided in MJPEG mode to control the video performance:

JPEG			
Frame	size:	1920x1080	$\sim$
Maxim	um frame rate:	10 fps	$\checkmark$
Video o	quality		
0	Constant bit rate:		
۲	Fixed quality:		
	Quality:	Good	$\checkmark$
	Maximum bit rate:	40 Mbps	$\checkmark$

Frame size

You can set up different video resolutions for different viewing devices. For example, set a smaller frame size and lower bit rate for remote viewing on mobile phones and a larger video size and a higher bit rate for live viewing on web browsers. Note that a larger frame size takes up more bandwidth.

Maximum frame rate

This limits the maximum refresh frame rate per second. Set the frame rate higher for smoother video quality.

If the power line frequency is set to 50Hz, the frame rates are selectable at 1fps, 2fps, 3fps, 5fps, 8fps, 10fps, and 15fps, and up to 50fps. If the power line frequency is set to 60Hz, the frame rates are selectable at 1fps, 2fps, 3fps, 5fps, 8fps, 10fps, 12fps, 15fps, and up to 30fps. You can also select **Customize** and manually enter a value. The frame rate will decrease if you select a higher resolution.

Video quality

Refer to the previous page setting an average or upper bound threshold for controlling the bandwidth consumed for transmitting motion jpegs. The configuration method is identical to that for H.264.

For the Constant Bit Rate and other settings, refer to the previous page for details.

# NOTE:

- Video quality and fixed quality refer to the compression rate. A lower value produces higher quality. The higher the compression rate, the lower the quality.
- Converting high-quality video significantly increases the CPU load, and you may encounter streaming disconnection or video loss while capturing a complicated scene. In the event of video loss, we suggest you customize the video stream to a lower resolution or reduce the frame rate for a smoother video.

# Media > Audio

#### **Audio Settings**

Audio settings		
Mute		
Microphone source:	Internal 💌	
External microphone input gain:	0	 
Audio type	0	100%
⊚ G.711:	pcmu 🗸	
G.726 bit rate:	32 Kbps 🔽	
		Save

<u>Mute</u>: Select this option to disable audio transmission from the Network Camera to all clients. Note that if muted, no audio data will be transmitted even if audio transmission is enabled on the Client Settings page. In that case, the following message is displayed:

Warning
The media type has been changed to video only because the media from server contains no audio
ОК

<u>Microphone source</u>: Select to stream the audio from the internal microphone or the external microphone.

<u>External microphone input gain</u>: Select the gain of the external audio input according to ambient conditions. Adjust the gain between 100% and 0%.

Audio type: Select audio codec and the sampling bit rate .

- G.711 also provides good sound quality and requires about 64Kbps. Select pcmu (µ-Law) or pcma (A-Law) mode.
- G.726 is a speech codec standard covering voice transmission at rates of 16, 24, 32, and 40kbit/ s.

When completed with the settings on this page, click **Save** to enable the settings.

# **Network > General settings**

This section explains how to configure a wired network connection for the Network Camera.

Network Type	Network type Port
	LAN     LAN
	Get IP address automatically
	Use fixed IP address
	Imable UPnP presentation
	Enable UPnP port forwarding
	© PPPoE
	Enable IPv6
	Save

#### LAN

Select this option when the Network Camera is deployed on a local area network (LAN) and is intended to be accessed by local computers. The default setting for the Network Type is LAN. Please rememer to click on the **Save** button when you complete the Network setting.

<u>Get IP address automatically</u>: Select this option to obtain an available dynamic IP address assigned by the DHCP server each time the camera is connected to the LAN.

<u>Use fixed IP address</u>: Select this option to manually assign a static IP address to the Network Camera.

Network type Port	
IAN	
Get IP address automatically	
Use fixed IP address	
IP address:	172.16.168.10
Subnet mask:	255.255.0.0
Default router:	172.16.0.1
Primary DNS:	192.168.0.21
Secondary DNS:	192.168.0.22
Primary WINS server:	192.168.0.21
Secondary WINS server:	192.168.0.22
Enable UPnP presentation	
Enable UPnP port forwarding	
© PPPoE	
Enable IPv6	
	Save

- 1. You can make use of VIVOTEK Installation Wizard 2 on the software CD to easily set up the Network Camera on LAN. Please refer to Software Installation on page 17 for details.
- 2. Enter the Static IP, Subnet mask, Default router, and Primary DNS provided by your ISP or network administrator.

<u>Subnet mask</u>: This is used to determine if the destination is in the same subnet. The default value is "255.255.255.0".

<u>Default router</u>: This is the gateway used to forward frames to destinations in a different subnet. Invalid router setting will disable the transmission to destinations across different subnets. Primary DNS: The primary domain name server that translates hostnames into IP addresses.

Secondary DNS: Secondary domain name server that backups the Primary DNS.

<u>Primary WINS server</u>: The primary WINS server that maintains the database of computer names and IP addresses.

<u>Secondary WINS server</u>: The secondary WINS server that maintains the database of computer names and IP addresses.

<u>Enable UPnP presentation</u>: Select this option to enable UPnP<sup>TM</sup> presentation for your Network Camera so that whenever a Network Camera is presented to the LAN, the shortcuts to connected Network Cameras will be listed in My Network Places. You can click the shortcut to link to the web browser. Currently, UPnP<sup>TM</sup> is supported by Windows XP or later. Note that to utilize this feature, please make sure the UPnP<sup>TM</sup> component is installed on your computer.

<u>Enable UPnP port forwarding</u>: To access the Network Camera from the Internet, select this option to allow the Network Camera to open ports automatically on the router so that video streams can be sent out from a LAN. To utilize of this feature, make sure that your router supports UPnP<sup>TM</sup> and it is activated.

#### PPPoE (Point-to-point over Ethernet)

Select this option to configure your Network Camera to make it accessible from anywhere as long as there is an Internet connection. Note that to utilize this feature, an account provided by your ISP is necessary.

Follow the steps below to acquire your Network Camera's public IP address.

- 1. Set up the Network Camera on the LAN.
- 2. Go to Configuration > Event > Event settings > Add server (please refer to Add server on page 110) to add a new email or FTP server.
- 3. Go to Configuration > Event > Event settings > Add media (please refer to Add media on page 115).

Select System log so that you will receive the system log in TXT file format which contains the Network Camera's public IP address in your email or on the FTP server.

4. Go to Configuration > Network > General settings > Network type. Select PPPoE and enter the user name and password provided by your ISP. Click **Save** to enable the setting.

Network type	
© LAN	
PPPoE	
User name:	
Password:	
Confirm password:	
Enable IPv6	

- 5. The Network Camera will reboot.
- 6. Disconnect the power to the Network Camera; remove it from the LAN environment.

# DOTE:

- If the default ports are already used by other devices connected to the same router, the Network Camera will select other ports for the Network Camera.
- If UPnP<sup>™</sup> is not supported by your router, you will see the following message: Error: Router does not support UPnP port forwarding.
- ► Steps to enable the UPnP<sup>TM</sup> user interface on your computer: Note that you must log on to the computer as a system administrator to install the UPnP<sup>TM</sup> components.
  - 1. Go to Start, click Control Panel, then click Add or Remove Programs.

an Diseason Management	Pick a category	1
and the second second	() () () () () () () () () () () () () (	and the second second second second
		1992 mar 1
(	and the second second	
		6

2. In the Add or Remove Programs dialog box, click Add/Remove Windows Components.

3. In the Windows Components Wizard dialog box, select **Networking Services** and click **Details**.

4. In the Networking Services dialog box, select Universal Plug and Play and click OK.

5. Click Next in the following window.

Windows Components You can add or remove co	reponents of Windows XP.	
	ment, click the checkbox. A sh re-installed. To see what's incl	
St Message Queung		0.0 MB
MSN Explorer		13.5 MB
M Sylvetworking Service	ni	03MB
C SOther Network File	and Print Services	0.0 MB
Call Indate Root Certifi	icales .	0.0 MR
The second state is a second state of the seco	whether the effect of the second	ated services and protocol

6. Click **Finish**. UPnP<sup>™</sup> is enabled.

► How does UPnP<sup>™</sup> work?

UPnP<sup>™</sup> networking technology provides automatic IP configuration and dynamic discovery of devices added to a network. Services and capabilities offered by networked devices, such as printing and file sharing, are available among each other without the need for cumbersome network configuration. In the case of Network Cameras, you will see Network Camera shortcuts under My Network Places.

Enabling UPnP port forwarding allows the Network Camera to open a secondary HTTP port on the router-not HTTP port-meaning that you have to add the secondary HTTP port number to the Network Camera's public address in order to access the Network Camera from the Internet. For example, when the HTTP port is set to 80 and the secondary HTTP port is set to 8080, refer to the list below for the Network Camera's IP address.

From the Internet	In LAN
http://203.67.124.123:8080	http://192.168.4.160 or http://192.168.4.160:8080

If the PPPoE settings are incorrectly configured or the Internet access is not working, restore the Network Camera to factory default; please refer to Restore on page 46 for details. After the Network Camera is reset to factory default, it will be accessible on the LAN.

#### Enable IPv6

Select this option and click **Save** to enable IPv6 settings.

Please note that this only works if your network environment and hardware equipment support IPv6. The browser should be Microsoft<sup>®</sup> Internet Explorer 8 or 9, Mozilla Firefox 6.0 or above.

When IPv6 is enabled, by default, the network camera will listen to router advertisements and be assigned with a link-local IPv6 address accordingly.

IPv6 Information: Click this button to obtain the IPv6 information as shown below.

close

If your IPv6 settings are successful, the IPv6 address list will be listed in the pop-up window. The IPv6 address will be displayed as follows:

#### Refers to Ethernet

[eth0 address]	
2001:0c08:2500:0002:0202:d1ff:fe04:65f4/64@Global —	Link-global IPv6 address/network mask
fe80.0000.0000.0000.0202.d1ff:fe04.65f4/64@Link —	Link-local IPv6 address/network mask
[Gateway]	а 
fe80::211:d8ff:fea2:1a2b	
[DNS]	а -
2010:05c0:978d::	
	-

Please follow the steps below to link to an IPv6 address:

- 1. Open your web browser.
- 2. Enter the link-global or link-local IPv6 address in the address bar of your web browser.
- 3. The format should be:

4. Press **Enter** on the keyboard or click the **Refresh** button to refresh the webpage. For example:

A Network Camera - Microsoft Internet Explorer	
File Edit View Favorites Tools Help

Address Addres	
VIVOTEK	

## NOTE:

If you have a Secondary HTTP port (the default value is 8080), you can also link to the webpage using the following address format: (Please refer to HTTP streaming on page 79 for detailed information.)

► If you choose PPPoE as the Network Type, the [PPP0 address] will be displayed in the IPv6 information column as shown below.

[eth0 address] fe80.0000.0000.0000.0202.d1ff:fe11.2299/64@Link	
[ppp0 address]	
fe80:0000:0000:0000:0202:d1ff:fe11:2299/10@Link	
2001:b100:01c0:0002:0202:d1ff:fe11:2299/64@Global	
[Gateway]	
fe80::90:1a00:4142:8ced	
[DNS]	
2001:b000::1	

<u>Manually setup the IP address</u>: Select this option to manually set up IPv6 settings if your network environment does not have DHCPv6 server and router advertisements-enabled routers. If you check this item, the following blanks will be displayed for you to enter the corresponding information:

Enable IPv6

Port

IPv6 information	
Manually setup the IP address	
Optional IP address / Prefix length	/ 64
Optional default router	
Optional primary DNS	
Network type	
HTTPS port:	443
Tw o w ay audio port:	5060
FTP port:	21
	Save

<u>HTTPS port</u>: By default, the HTTPS port is set to 443. It can also be assigned to another port number between 1025 and 65535.

<u>Two way audio port</u>: By default, the two way audio port is set to 5060. Also, it can also be assigned to another port number between 1025 and 65535.

The Network Camera supports two way audio communication so that operators can transmit and receive audio simultaneously. By using the Network Camera's built-in or external microphone and an external speaker, you can communicate with people around the Network Camera.

Note that as JPEG only transmits a series of JPEG images to the client, to enable the two-way audio function, make sure the video mode is set to "MPEG-4" or "H.264" on the Media > Video > Stream settings page and the media option is set to "Media > Video > Stream settings" on the Client Settings page. Please refer to Client Settings on page 31 and Stream settings on page 65.

Audio is being transmitted to the Network Camera

Click **F** to enable audio transmission to the Network Camera; click **1** to adjust the volume of microphone; click **1** to turn off the audio. To stop talking, click **F** again.

<u>FTP port</u>: The FTP server allows the user to save recorded video clips. You can utilize VIVOTEK's Installation Wizard 2 to upgrade the firmware via FTP server. By default, the FTP port is set to 21. It also can be assigned to another port number between 1025 and 65535.

# **Network > Streaming protocols**

### **HTTP streaming**

To utilize HTTP authentication, make sure that your have set a password for the Network Camera first; please refer to Security > User account on page 89 for details.

HTTP streaming RTSP streaming	
Authentication:	basic V
HTTP port:	80
Secondary HTTP port:	8080
Access name for stream 1:	video.mjpg
Access name for stream 2:	video2.mjpg
Access name for stream 3:	video3.mjpg
Access name for stream 4:	video4.mjpg
	Save

<u>Authentication</u>: Depending on your network security requirements, the Network Camera provides two types of security settings for an HTTP transaction: basic and digest.

If **basic** authentication is selected, the password is sent in plain text format and there can be potential risks of being intercepted. If **digest** authentication is selected, user credentials are encrypted using MD5 algorithm and thus provide better protection against unauthorized accesses.

<u>HTTP port / Secondary HTTP port</u>: By default, the HTTP port is set to 80 and the secondary HTTP port is set to 8080. They can also be assigned to another port number between 1025 and 65535. If the ports are incorrectly assigned, the following warning messages will be displayed:

Microsoft Internet Explorer	Microsoft Internet Explorer
HTTP port must be 80 or from 1025 to 65535	Secondary HTTP port must be from 1025 to 65535
ОК	ОК

To access the Network Camera on the LAN, both the HTTP port and secondary HTTP port can be used to access the Network Camera. For example, when the HTTP port is set to 80 and the secondary HTTP port is set to 8080, refer to the list below for the Network Camera's IP address.

On the LAN
http://192.168.4.160 or
http://192.168.4.160:8080

<u>Access name for stream 1 ~ 4</u>: This Network camera supports multiple streams simultaneously. The access name is used to identify different video streams. Users can click **Media > Video > Stream settings** to set up the video quality of linked streams. For more information about how to set up the video quality, please refer to Stream settings on page 62.

When using **Mozilla Firefox** to access the Network Camera and the video mode is set to JPEG, users will receive video comprised of continuous JPEG images. This technology, known as "server push", allows the Network Camera to feed live pictures to Mozilla Firefox.

URL command -- http://<ip address>:<http port>/<access name for stream 1, 2, 3 or 4> For example, when the Access name for stream 2 is set to video2.mjpg:

- 1. Launch Mozilla Firefox or Netscape.
- 2. Type the above URL command in the address bar. Press Enter.
- 3. The JPEG images will be displayed in your web browser.

## NOTE:

Microsoft<sup>®</sup> Internet Explorer does not support server push technology; therefore, you will not be able to access a video stream using http://<ip address>:<http port>/<access name for stream 1, 2, 3, or 4>.

### **RTSP Streaming**

To utilize RTSP streaming authentication, make sure that you have set a password for controlling the access to video stream first. Please refer to Security > User account on page 89 for details.

Authentication:	basic 💙	
Access name for stream 1	live.sdp	
Access name for stream 2:	live2.sdp	
Access name for stream 3:	live3.sdp	
ccess name for stream 4.	live4.sdp	
RTSP port	554	
RTP port for video:	5556	
RTCP part for video:	6557	
TP port for metadata	6556	
RTCP port for metadata	0557	
RTP port for audio	5558	
RTCP port for audio	(6550)	
<ul> <li>Multicast settings for stream 1</li> </ul>		
Multicast settings for stream 2		
Multicast settings for stream 3		
Multicast settings for stream 4		

<u>Authentication</u>: Depending on your network security requirements, the Network Camera provides three types of security settings for streaming via RTSP protocol: disable, basic, and digest. If **basic** authentication is selected, the password is sent in plain text format, but there can be potential risks of it being intercepted. If **digest** authentication is selected, user credentials are encrypted using MD5 algorithm, thus providing better protection against unauthorized access. The availability of the RTSP streaming for the three authentication modes is listed below:

	Quick Time player	VLC
Disable	0	0
Basic	0	0
Digest	0	Х

<u>Access name for stream 1 ~ 4</u>: This Network camera supports multiple streams simultaneously. The access name is used to differentiate the streaming source.

If you want to use an RTSP player to access the Network Camera, you have to set the video mode to H.264 and use the following RTSP URL command to request transmission of the streaming data. rtsp://<ip address>:<rtsp port>/<access name for stream 1 to 4>

For example, when the access name for stream 1 is set to live.sdp:

- 1. Launch an RTSP player.
- 2. Choose File > Open URL. A URL dialog box will pop up.
- 3. Type the above URL command in the text box.
- 4. The live video will be displayed in your player as shown below.

Open LIRI	
Enter an Internet URL to open	
rtsp://192.168.5.151 554/live.sdp	

RTSP port /RTP port for video, audio/ RTCP port for video, audio

- RTSP (Real-Time Streaming Protocol) controls the delivery of streaming media. By default, the port number is set to 554.
- The RTP (Real-time Transport Protocol) is used to deliver video and audio data to the clients. By default, the RTP port for video is set to 5556.
- The RTCP (Real-time Transport Control Protocol) allows the Network Camera to transmit the data by monitoring the Internet traffic volume. By default, the RTCP port for video is set to 5557.

The ports can be changed to values between 1025 and 65535. The RTP port must be an even number and the RTCP port is the RTP port number plus one, and thus is always an odd number. When the RTP port changes, the RTCP port will change accordingly.

If the RTP ports are incorrectly assigned, the following warning message will be displayed:

<u>Multicast settings for streams</u>: Click the items to display the detailed configuration information. Select the Always multicast option to enable multicast for video streams.

Unicast video transmission delivers a stream through point-to-point transmission; multicast, on the other hand, sends a stream to the multicast group address and allows multiple clients to acquire the stream at the same time by requesting a copy from the multicast group address. Therefore, enabling multicast can effectively save Internet bandwith.

The ports can be changed to values between 1025 and 65535. The multicast RTP port must be an even number and the multicast RTCP port number is the multicast RTP port number plus one, and thus is always odd. When the multicast RTP port changes, the multicast RTCP port will change accordingly.

If the multicast RTP video ports are incorrectly assigned, the following warning message will be displayed:

<u>Multicast TTL [1~255]</u>: The multicast TTL (Time To Live) is the value that tells the router the range a packet can be forwarded.

Initial TTL	Scope
0	Restricted to the same host
1	Restricted to the same subnetwork
32	Restricted to the same site
64	Restricted to the same region
128	Restricted to the same continent
255	Unrestricted in scope

## IMPORTANT:

The Multicast metadata port is utilized by VIVOTEK VADP modules to transfer video analytics results, PTZ stream, textual data, and event messages between the camera and the client side running and observing the video analysis. If your client side computer is located outside the local network, you may need to open the associated TCP port on routers and firewall.

## Network > DDNS

This section explains how to configure the dynamic domain name service for the Network Camera. DDNS is a service that allows your Network Camera, especially when assigned with a dynamic IP address, to have a consistent host and domain name.

### **Express link**

Express Link is a free service provided by VIVOTEK server, which allows users to register a domain name for a network device. One URL can only be mapped to one MAC address. This service will examine if the host name is valid and automatically open a port on your router. If using DDNS, the user has to manually configure UPnP port forwarding. Express Link is more convenient and easier to set up.

Expres	s link	Manual setup

Enable DDNS:	
Provider:	Dyndns.org(Dynamic)
Host name:	
User name:	
Password:	

Enable DDNS: Select this option to enable the DDNS setting.

Provider: Select a DDNS provider from the provider drop-down list.

VIVOTEK offers **Safe100.net**, a free dynamic domain name service, to VIVOTEK customers. It is recommended that you register **Safe100.net** to access VIVOTEK's Network Cameras from the Internet. Additionally, we offer other DDNS providers, such as Dyndns.org(Dynamic), Dyndns. org(Custom), TZO.com, DHS.org, CustomSafe100, dyn-interfree.it.

Note that before utilizing this function, please apply for a dynamic domain account first.

#### ■ Safe100.net

- 1. In the DDNS column, select **Safe100.net** from the drop-down list. Click **I accept** after reviewing the terms of the Service Agreement.
- 2. In the Register column, fill in the Host name (xxxx.safe100.net), Email, Key, and Confirm Key, and click **Register**. After a host name has been successfully created, a success message will be displayed in the DDNS Registration Result column.

Register		
Host name:	VVTK.safe100.net

Upon successful registration, you can click <u>copy</u> to automatically upload relevant information to the DDNS form or you can manually fill it in. Then, click "Save" to save new settings.				

4. Select Enable DDNS and click **Save** to enable the setting.

#### CustomSafe100

VIVOTEK offers documents to establish a CustomSafe100 DDNS server for distributors and system integrators. You can use CustomSafe100 to register a dynamic domain name if your distributor or system integrators offer such services.

- 1. In the DDNS column, select CustomSafe100 from the drop-down list.
- 2. In the Register column, fill in the Host name, Email, Key, and Confirm Key; then click **Register**. After a host name has been successfully created, you will see a success message in the DDNS Registration Result column.
- Click Copy and all for the registered information will be uploaded to the corresponding fields in the DDNS column.
- 4. Select Enable DDNS and click **Save** to enable the setting.

<u>Forget key</u>: Click this button if you have forgotten the key to Safe100.net or CustomSafe100. Your account information will be sent to your email address.

Refer to the following links to apply for a dynamic domain account when selecting other DDNS providers:

Dyndns.org(Dynamic) / Dyndns.org(Custom): visit http://www.dyndns.com/

# Network > QoS (Quality of Service)

Quality of Service refers to a resource reservation control mechanism, which guarantees a certain quality to different services on the network. Quality of service guarantees are important if the network capacity is insufficient, especially for real-time streaming multimedia applications. Quality can be defined as, for instance, a maintained level of bit rate, low latency, no packet dropping, etc.

The following are the main benefits of a QoS-aware network:

- The ability to prioritize traffic and guarantee a certain level of performance to the data flow.
- The ability to control the amount of bandwidth each application may use, and thus provide higher reliability and stability on the network.

#### **Requirements for QoS**

To utilize QoS in a network environment, the following requirements must be met:

- All network switches and routers in the network must include support for QoS.
- The network video devices used in the network must be QoS-enabled.

### QoS models

#### CoS (the VLAN 802.1p model)

IEEE802.1p defines a QoS model at OSI Layer 2 (Data Link Layer), which is called CoS, Class of Service. It adds a 3-bit value to the VLAN MAC header, which indicates the frame priority level from 0 (lowest) to 7 (highest). The priority is set up on the network switches, which then use different queuing disciplines to forward the packets.

Below is the setting column for CoS. Enter the **VLAN ID** of your switch ( $0\sim4095$ ) and choose the priority for each application ( $0\sim7$ ).

CoS		
Enable CoS		
VLAN ID:	1	
Live video:	0 🔻	
Live audio:	0 🔻	
Event/Alarm:	0 🔻	
Management:	0 🔻	

If you assign Video the highest level, the switch will handle video packets first.

## 🖉 NOTE:

► A VLAN Switch (802.1p) is required. Web browsing may fail if the CoS setting is incorrect.

- The Class of Service technologies do not guarantee a level of service in terms of bandwidth and delivery time; they offer a "best-effort." Users can think of CoS as "coarsely-grained" traffic control and QoS as "finely-grained" traffic control.
- Although CoS is simple to manage, it lacks scalability and does not offer end-to-end guarantees since it is based on L2 protocol.

### QoS/DSCP (the DiffServ model)

DSCP-ECN defines QoS at Layer 3 (Network Layer). The Differentiated Services (DiffServ) model is based on packet marking and router queuing disciplines. The marking is done by adding a field to the IP header, called the DSCP (Differentiated Services Codepoint). This is a 6-bit field that provides 64 different class IDs. It gives an indication of how a given packet is to be forwarded, known as the Per Hop Behavior (PHB). The PHB describes a particular service level in terms of bandwidth, queueing theory, and dropping (discarding the packet) decisions. Routers at each network node classify packets according to their DSCP value and give them a particular forwarding treatment; for example, how much bandwidth to reserve for it.

Below are the setting options of DSCP (DiffServ Codepoint). Specify the DSCP value for each application (0~63).

Qo S/DSCP		
Enable QoS/DSCP

## **Network > SNMP** (Simple Network Management Protocol)

This section explains how to use the SNMP on the network camera. The Simple Network Management Protocol is an application layer protocol that facilitates the exchange of management information between network devices. It helps network administrators to remotely manage network devices and find, solve network problems with ease.

- The SNMP consists of the following three key components:
- 1. Manager: Network-management station (NMS), a server which executes applications that monitor and control managed devices.
- 2. Agent: A network-management software module on a managed device which transfers the status of managed devices to the NMS.
- 3. Managed device: A network node on a managed network. For example: routers, switches, bridges, hubs, computer hosts, printers, IP telephones, network cameras, web server, and database.

Before configuring SNMP settings on the this page, please enable your NMS first.

### **SNMP** Configuration

#### Enable SNMPv1, SNMPv2c

**~** 

Select this option and enter the names of Read/Write community and Read Only community according to your NMS settings.

Ena	ble SNMPv1, SNMPv2c		
	SNMPv1, SNMPv2c Settin	gs	
	Read/Write community:	Private	
	Read only community:	Public	

#### Enable SNMPv3

This option contains cryptographic security, a higher security level, which allows you to set the Authentication password and the Encryption password.

- Security name: According to your NMS settings, choose Read/Write or Read Only and enter the community name.
- Authentication type: Select MD5 or SHA as the authentication method.
- Authentication password: Enter the password for authentication (at least 8 characters).
- Encryption password: Enter a password for encryption (at least 8 characters).

🗹 Ena	ble SNMPv3		
[	SNMPv3 Settings		
	Read/Write Security name:	Private	
	Authentication Type:	MD5 💌	
	Authentication Password:		
	Encryption Password:		
	Read only Security name:	Public	
	Authentication Type:	MD5 🗸	
	Authentication Password:		
	Encryption Password:		

## Security > User accounts

This section explains how to enable password protection and create multiple accounts.

<b>Root Password</b>		
	Root password	
	Root password:	
	Confirm root password:	Save

The administrator account name is "root", which is permanent and can not be deleted. If you want to add more accounts in the Manage User column, please apply the password for the "root" account first.

- 1. Type the password identically in both text boxes, then click **Save** to enable password protection.
- 2. A window will be prompted for authentication; type the correct user's name and password in their respective fields to access the Network Camera.

#### **Privilege Management**

Root passwor	d Privilege manageme	Account managemen	t
Allow anor	nymous viewing		
Operator:	Digital output	PTZ control	
View er:	Digital output	PTZ control	Save

<u>PTZ control</u>: You can modify the management privilege for operators or viewers. Select or deselect the checkboxes, then click **Save** to enable the settings. If you give Viewers the privilege, Operators will also have the ability to control the Network Camera through the main page. (Please refer to Configuration on page 36).

<u>Allow anonymous viewing</u>: If you check this item, any client can access the live stream without entering a User ID and Password.

#### **Account Management**

Manage user	
Existing user name:	Add new user
User name:	
User password:	Delete
Confirm user password:	Add
Privilege:	Administrator  Administrator Update
	Operator Viewer

Administrators can create up to 20 user accounts.

- 1. Input the new user's name and password.
- 2. Select the privilege level for the new user account. Click **Add** to enable the setting.

Access rights are sorted by user privilege (Administrator, Operator, and Viewer). Only administrators can access the Configuration page. Although operators cannot access the Configuration page, they can use the URL Commands to get and set the value of parameters. For more information, please refer to URL Commands of the Network Camera on page 139. Viewers can only access the main page for live viewing.

Here you also can change a user's access rights or delete user accounts.

- 1. Select an existing account to modify.
- 2. Make necessary changes and click **Update** or **Delete** to enable the setting.

## **Security > HTTPS** (Hypertext Transfer Protocol over SSL)

This section explains how to enable authentication and encrypted communication over SSL (Secure Socket Layer). It helps protect streaming data transmission over the Internet on higher security level.

#### **Create and Install Certificate Method**

Before using HTTPS for communication with the Network Camera, a **Certificate** must be created first. There are three ways to create and install a certificate:

**Create self-signed certificate** 

- 1. Select this option from a pull-down menu.
- 2. In the first column, select **Enable HTTPS secure connection**, then select a connection option: "HTTP & HTTPS" or "HTTPS only".
- 3. Click **Create certificate** to generate a certificate.

HTTPS	5	
🔽 Ena	able HTTPS secure connection	
👷 Mo	de:	
	HTTP & HTTPS O HTTPS only	Please wait while the certificate is being
👷 Cer	rtificate:	generated
	Certificate information	
	Status:	Not installed
	method:	Create self-signed certificate
	Country:	TW
	State or province:	Asia
	Locality:	Asia
	Organization:	VIVOTEK.Inc
	Organization unit:	VIVOTEK.Inc
	Common name:	www.vivotek.com
	Validity:	3650 days
		Create certificate

4. The Certificate Information will automatically be displayed as shown below. You can click **Certificate properties** to view detailed information about the certificate.

Certificate information	
Status:	Active
method:	Create self-signed certificate

State or province:	Asia
Locality:	Asia
Organization:	VIVOTEK.Inc
Organization unit:	VIVOTEK.Inc
Common name:	www.vivotek.com
	Certificate properties Remove certificate

- 5. Click **Save** to preserve your configuration, and your current session with the camera will change to the encrypted connection.
- 6. If your web session does not automatically change to an encrypted HTTPS session, click **Home** to return to the main page. Change the URL address from "<u>http://</u>" to "<u>https://</u>" in the address bar and press **Enter** on your keyboard. Some Security Alert dialogs will pop up. Click **OK** or **Yes** to enable HTTPS.

### https://

Create certificate request and install

- 1. Select the option from the **Method** pull-down menu.
- 2. Click Create certificate to proceed.

w

3. The following information will show up in a pop-up window after clicking **Create**. Then click **Save** to generate the certificate request.

Status Not installed

## Security > Access List

This section explains how to control access permission by verifying the client PC's IP address.

### **General Settings**

Г	General settings	
	Maximum number of concurrent streaming: 10 💌 Connection management	

<u>Maximum number of concurrent streaming connection(s) limited to</u>: Simultaneous live viewing for 1~10 clients (including stream 1 to stream 3). The default value is 10. If you modify the value and click **Save**, all current connections will be disconnected and automatically attempt to re-link (IE Explorer or Quick Time Player).

<u>View Information</u>: Click this button to display the connection status window showing a list of the current connections. For example:

	IP	address	Elapsed time	User ID
C.	172.16.2.53 192.168.4.104		00:00:05	
			01:49:35	
	Refresh	Add to deny list	Disconnect	Close

Note that only consoles that are currently displaying live streaming will be listed in the View Information list.

- IP address: Current connections to the Network Camera.
- Elapsed time: How much time the client has been at the webpage.
- User ID: If the administrator has set a password for the webpage, the clients have to enter a user name and password to access the live video. The user name will be displayed in the User ID column. If the administrator allows clients to link to the webpage without a user name and password, the User ID column will be empty.

There are some situations that allow clients access to the live video without a user name and password:

- 1. The administrator does not set up a root password. For more information about how to set up a root password and manage user accounts, please refer to Security > User account on page 89.
- 2. The administrator has set up a root password, but set **RTSP Authentication** to "disable". For more information about **RTSP Authentication**, please refer to RTSP Streaming on page 80.
- 3. The administrator has set up a root password, but allows anonymous viewing. For more information about **Allow Anonymous Viewing**, please refer to page 89.

- Refresh: Click this button to refresh all current connections.
- Add to deny list: You can select entries from the Connection Status list and add them to the Deny List to deny access. Please note that those checked connections will only be disconnected temporarily and will automatically try to re-link again (IE Explorer or QuickTime Player). If you want to enable the denied list, please check Enable access list filtering and click Save in the first column.
- Disconnect: If you want to break off the current connections, please select them and click this button. Please note that those checked connections will only be disconnected temporarily and will automatically try to re-link again (IE Explorer or QuickTime Player).

#### Filter

<u>Enable access list filtering</u>: Check this item and click **Save** if you want to enable the access list filtering function.

<u>Filter type</u>: Select **Allow** or **Deny** as the filter type. If you choose **Allow Type**, only those clients whose IP addresses are on the Access List below can access the Network Camera, and the others cannot. On the contrary, if you choose **Deny Type**, those clients whose IP addresses are on the Access List below will not be allowed to access the Network Camera, and the others can.

Filter	
Filter type: 🔿 Allow 🙂 Deny	
Fittertype:  Allow & Deny IPv4 access list	
Add Delete	
IPv6 access list	
Senating generation of	
Add Delete	

Then you can **Add** a rule to the following Access List. Please note that the IPv6 access list column will not be displayed unless you enable IPv6 on the Network page. For more information about **IPv6 Settings**, please refer to Network > General settings on page 71 for detailed information.

There are three types of rules:

<u>Single</u>: This rule allows the user to add an IP address to the Allowed/Denied list. For example:

Filter address	
Rule: Single 💌	
IP address: 192.168.2.1	
OK Cancel	

<u>Network</u>: This rule allows the user to assign a network address and corresponding subnet mask to the Allow/Deny List. The address and network mask are written in CIDR format. For example:

Filter address				
Rule: Network				
Network address / Network mask: 192.168.2.0	/ 24			
OK Cancel				
ID address range 1	00.460.0 yy will be beloked			

#### IP address range 192.168.2.x will be bolcked.

If IPv6 filter is preferred, you will be prompted by the following window. Enter the IPv6 address and the two-digit prefix length to specify the range of IP addresses in your configuration.

Filter address	
Rule: Network	
Network address / Network mask:	2

<u>Range</u>: This rule allows the user to assign a range of IP addresses to the Allow/Deny List. Note: This rule only applies to IPv4 addresses. For example:

Filter address			
Rule: Range 💌			
IP address - IP address:	192.168.2.0	192.168.2.255	]
OK Cancel			

#### **Administrator IP address**

<u>Always allow the IP address to access this device</u>: You can check this item and add the Administrator's IP address in this field to make sure the Administrator can always connect to the device.

Administrator IP address	
Always allow the IP address to access this device	
	Save

## Security > IEEE 802.1X

Enable this function if your network environment uses IEEE 802.1x, which is a port-based network access control. The network devices, intermediary switch/access point/hub, and RADIUS server must support and enable 802.1x settings.

The 802.1x standard is designed to enhance the security of local area networks, which provides authentication to network devices (clients) attached to a network port (wired or wireless). If all certificates between client and server are verified, a point-to-point connection will be enabled; if authentication fails, access on that port will be prohibited. 802.1x utilizes an existing protocol, the Extensible Authentication Protocol (EAP), to facilitate communication.

■ The components of a protected network with 802.1x authentication:

- 1. Supplicant: A client end user (camera), which requests authentication.
- 2. Authenticator (an access point or a switch): A "go between" which restricts unauthorized end users from communicating with the authentication server.
- 3. Authentication server (usually a RADIUS server): Checks the client certificate and decides whether to accept the end user's access request.
- VIVOTEK Network Cameras support two types of EAP methods to perform authentication: EAP-PEAP and EAP-TLS.

Please follow the steps below to enable 802.1x settings:

- 1. Before connecting the Network Camera to the protected network with 802.1x, please apply a digital certificate from a Certificate Authority (i.e., your network administrator) which can be validated by a RADIUS server.
- Connect the Network Camera to a PC or notebook outside of the protected LAN. Open the configuration page of the Network Camera as shown below. Select EAP-PEAP or EAP-TLS as the EAP method. In the following blanks, enter your ID and password issued by the CA, then upload related certificate(s).

EAP-PEAP 💌
Browse Upload
Remove

IEEE 802.1x	
Enable 802.1x	
EAP method:	EAP-TLS 💌
Identity:	
Private key passord:	
CA certificate:	Browse Upload
Status: no file	Remove
client certificate:	Browse Upload
Status: no file	Remove
Client private key:	Browse Upload
Status: no file	Remove

3. When all settings are complete, move the Network Camera to the protected LAN by connecting it to an 802.1x enabled switch. The devices will then start the authentication automatically.

- ► The authentication process for 802.1x:
- 1. The Certificate Authority (CA) provides the required signed certificates to the Network Camera (the supplicant) and the RADIUS Server (the authentication server).
- 2. A Network Camera requests access to the protected LAN using 802.1X via a switch (the authenticator). The client offers its identity and client certificate, which is then forwarded by the switch to the RADIUS Server, which uses an algorithm to authenticate the Network Camera and returns an acceptance or rejection back to the switch.
- 3. The switch also forwards the RADIUS Server's certificate to the Network Camera.
- 4. Assuming all certificates are validated, the switch then changes the Network Camera's state to authorized and is allowed access to the protected network via a pre-configured port.

# PTZ > PTZ settings

This section explains how to control the Network Camera's Pan/Tilt/Zoom operation.

Digital: Control the e-PTZ operation. Within a field of view, it allows users to quickly move the focus to a target area for close-up viewing without physically moving the camera.

## **Digital PTZ Operation (E-PTZ Operation)**

The e-PTZ control settings section will be displayed as shown below:

	2015/05	5/20 09:57:3	30				_

For e-PTZ related details, please refer to page 104.

Auto pan/patrol speed: Select the speed from 1~5 (slow/fast) to set up the Auto pan/patrol speed control.

#### Zoom factor display

If you check this item, the zoom indicator will be displayed on the home page when you zoom in/out the live viewing window as the picture shown on the next page.

When completed with the e-PTZ settings, click **Save** to enable the settings on this page.

## Home page in the E-PTZ Mode

- The e-Preset Positions will also be displayed on the home page. Select one from the drop-down list, and the Network Camera will move to the selected position.
- If you have set up different preset positions for different streams, you can select one of the video streams to display its separate preset positions.

#### **Global View**

In addition to using the e-PTZ control panel, you can also use the mouse to drag or resize the floating frame to pan/tilt/zoom the viewing region. The live view window will also move to the viewing region accordingly.

#### Moving Instantly

If you check this item, the live view window will switch to the new viewing region instantly after you move the floating frame. If not selected, the process of moving from one position to another will be shown.

#### Click on Image

The e-PTZ function also supports "Click on Image". When you click on any point of the Global View Window or Live View Window, the viewing region will also move to that point.

Note that the "Click on Image" function only applies when you have configured a smaller "Region of Interest" out of the maximum output frame! e.g., an 800 x 600 region from out of the camera's maximum frame size.

<u>Patrol button</u>: Click this button, then the Network Camera will patrol among the selected preset positions continuously.

### Patrol settings

You can select some preset positions for the Network Camera to patrol.

- Please follow the steps below to set up a patrol schedule:
- 1. Select the preset locations on the list, and click  $\gg$ .
- 2. The selected preset locations will be displayed on the Patrol locations list.
- 3. Set the **Dwelling time** for the preset location during an auto patrol.
- 4. If you want to delete a preset location from the Patrol locations list, select it and click **Remove**.
- 5. Select a location and click **I** to rearrange the patrol order.
- 6. Select patrol locations you want to save in the list and click **Save** to enable the patrol settings.
- 7. To implement the patrol schedule, please go to homepage and click on the **Patrol** button. Please refer to the next page.

- The Preset Positions will also display on the Home page. Select one from the Go to menu, and the Network Camera will move to the selected position.
- ► Click Patrol: The Network Camera will patrol along the positions repeatedly.

## **Event > Event settings**

This section explains how to configure the Network Camera to respond to particular situations (event). A typical application is that when a motion is detected, the Network Camera sends buffered images to an FTP server or e-mail address as notifications. Click on **Help**, there is an illustration shown in the pop-up window explaining that an event can be triggered by many sources, such as motion detection or external devices connected via the digital input wires. When an event is triggered, you can specify what type of action that will be performed. You can configure the Network Camera to send snapshots or videos to your email address or FTP site.

Name	Status Sun	Mon Tue We	ed Thu Fri Sat	Time Trigger	
Add	<u>Help</u>			gigger or Eac Key	
			ection, Periodically, A. System boot	(What to do)	
			Media (What to send) Ex	Server (Where to send)	

#### **Event**

To configure an event with reactive measures such as recording video or snapshots, it is necessary to configure the server and media settings so that the Network Camera will know what action to take (such as which server to send the media files to) when a trigger is activated. An event is an action initiated by a user-defined trigger source. In the **Event** column, click **Add** to open the event settings window. Here you can arrange three elements -- Schedule, Trigger, and Action to set an event. A total of 3 event settings can be configured.

Enable this event	Event					
Event name: Enable this event Priority: Normal Detection or digital input after 10 second(s). Event Schedule Vent Schedule	Name Stat	tus Sun Mon Tue	Wed Thu F	ri Sat	Time	Trigger
Enable this event Priority: Normative Detect next motion detection or digital input after 10 second(s).  I. Schedule Sun I Mon I Tue I Wed I Thu I fin I Sat Time Aways From 10 00 to 24 00 [[httmm]]	Add	<u>Help</u>				
1. Schedule         2. Trigger	Event name: Enable this event Priority: Normal •					
1. Schedule 2. Trigger	and the second se	r digital input after 10	second(s).			
	1. Schedule	12 Sun 12 Mon 12 Tue Time 12 Always				

- Event name: Enter a name for the event setting.
- Enable this event: Select this option to enable the event setting.
- Priority: Select the relative importance of this event (High, Normal, or Low). Events with a higher priority setting will be executed first.
- Detect next event after seconds: Enter the duration in seconds to pause motion detection after a motion is detected. This can prevent event-related actions to take place too frequently.

#### 1. Schedule

Specify the period of them during which the event trigger will take effect. Please select the days of the week and the time in a day (in 24-hr time format) for the event triggering schedule. For example, you may prefer an event to be triggered only during the off-office hours.

#### 2. Trigger

This is the cause or stimulus which defines when to trigger the Network Camera. The trigger source can be configured to use the Network Camera's built-in motion detection mechanism or external digital input devices.

There are several choices of trigger sources as shown on the next page. Select the item to display the detailed configuration options.

Video motion detection

This option makes use of the built-in motion detection mechanism as a trigger source. To enable this function, you need to configure a Motion Detection Window first. For more information, please refer to Motion Detection on page 120 for details.

Video motion detection		
Normal: 🔲 door		
Profile: 📄 hallway		
Note: Please configure	Motion detection fir	st

#### Periodically

This option allows the Network Camera to trigger periodically for every other defined minute. Up to 999 minutes are allowed.

Trigger every other 1 minutes

#### Digital input

This option allows the Network Camera to use an external digital input device or sensor as a trigger source. Depending on your application, there are many choices with digital input devices on the market which help detect changes in temperature, vibration, sound, light, etc.

System boot

This option triggers the Network Camera when the power to the Network Camera is disconnected and re-connected.

Recording notify

This option allows the Network Camera to trigger when the recording disk is full or when recording starts to overwrite older data.

Audio detection

A preset threshold can be configured with an external microphone as the trigger to system event. The triggering condition can be an input exceeding or falling below a threshold. Audio detection can take place as a complement to motion detection or as a method to detect activities not covered by the camera's view.

Camera tampering detection

This option allows the Network Camera to trigger when the camera detects that is is being tampered with. To enable this function, you need to configure the Tampering Detection option first. Please refer to page 124 for detailed information.

- Camera tampering detection		
Tampering detection		
Trigger duration 10	seconds (10+600)	
Trigger threshold 12	(0~100)	
image too dark detection		

#### Manual Triggers

This option allows users to enable event triggers manually by clicking the on/off button on the homepage. Please configure 1 to 3 associated events before using this function.

#### VADP

It is presumed that you already uploaded and enabled the VADP modules before you can associatee VADP triggers with an Event setting.

Click on the Set VADP Trigger button to open the VADP setup menu. The triggering conditions available with 3rd-party software modules known as VADP will be listed. Use the arrow buttons to select these triggers. Users may implant these modules for different purposes such as triggering motion detection, or applications related to video analysis, etc. Please refer to page 127 for the configuration options with VADP modules.

ADP Triggers	Triggers for Event Settings

### 3. Action

Define the actions to be performed by the Network Camera when a trigger is activated.

Action	
<ul> <li>Backup media if the network is</li> <li>Trigger digital output for 1</li> </ul>	s disconnected seconds
Server Media	Extra parameter
SDNone SC	) test View
HTTPNone	
nasNone vi	] Create folders by date time and hour automatically
Add server 💟 Add media	0

■ Trigger digital output for □ seconds

Select this option to turn on the external digital output device when a trigger is activated. Specify the length of the trigger interval in the text box.

Backup media if the network is disconnected

Select this option to backup media file on SD card if the network is disconnected. This function will only be displayed after you set up a network storage (NAS). The media to back up can include snapshot images, video, or system logs depending on your event settings.

### Add server

It is necessary to configure the server and media settings so that the Network Camera will know what action to take (such as which server to send the media files to) when a trigger is activated. Click **Add server** to open the server setting window. You can specify where the notification messages are sent to when a trigger is activated. A total of 5 server settings can be configured.

There are four choices of server types available: Email, FTP, HTTP, and Network storage. Select the item to display the detailed configuration options. You can configure either one or all of them.

Add server	Add media 💟		
Server name:	Email

#### Server type - Email

Select to send the media files via email when a trigger is activated.

- Server name: Enter a name for the server setting.
- Sender email address: Enter the email address of the sender.
- Recipient email address: Enter the email address of the recipient.
- Server address: Enter the domain name or IP address of the email server.
- User name: Enter the user name of the email account if necessary.
- Password: Enter the password of the email account if necessary.
- Server port: The default mail server port is set to 25. You can also manually set another port.

If your SMTP server requires a secure connection (SSL), select **This server requires a secure connection (SSL)**.

To verify if the email settings are correctly configured, click **Test**. The result will be shown in a pop-up window. If successful, you will also receive an email indicating the result.

#### Server type - FTP

Select to send the media files to an FTP server when a trigger is activated.

ftp.vivotek.com
21
vivotek
•••••
Test Save server Close

- Server name: Enter a name for the server setting.
- Server address: Enter the domain name or IP address of the FTP server.
- Server port: By default, the FTP server port is set to 21. It can also be assigned to another port number between 1025 and 65535.
- User name: Enter the login name of the FTP account.
- Password: Enter the password of the FTP account.
- FTP folder name

Enter the folder where the media files will be placed. If the folder name does not exist, the Network Camera will automatically create one on the FTP server.

Passive mode

Most firewalls do not accept new connections initiated from external requests. If the FTP server supports passive mode, select this option to enable passive mode FTP and allow data transmission to pass through the firewall. The firmware default has the Passive mode checkbox selected.

To verify if the FTP settings are correctly configured, click **Test**. The result will be shown in a pop-up window as shown below. If successful, you will also receive a test.txt file on the FTP server.

Click Save server to enable the settings.

#### Server type - HTTP

Select to send the media files to an HTTP server when a trigger is activated.

Server name: HTTP		
Server Type		
💿 Email		
◎ FTP		
HTTP		
URL:	http://192.168.5.10/cgi-bin/up	oload.cgi
User name:		
Password:		
Network storage		
	Test Save server	Close

- Server name: Enter a name for the server setting.
- URL: Enter the URL of the HTTP server.
- User name: Enter the user name if necessary.
- Password: Enter the password if necessary.

To verify if the HTTP settings are correctly configured, click **Test**. The result will be shown in a pop-up window as shown below. If successful, you will receive a test.txt file on the HTTP server.

Click Save server to enable the settings.

Network storage:

Select to send the media files to a networked storage when a trigger is activated. Please refer to **NAS** server on page 133 for details. Note that only one NAS server can be configured.

Click **Save server** to enable the settings.

- SD Test: Click to test your SD card. The system will display a message indicating the result as a success or a failure. If you want to use your SD card for local storage, please format it before use. Please refer to page 115 for detailed information.
- View: Click this button to open a file list window. This function applies only to SD card and networked storage. If you click the View button for an SD card, a Local storage page will prompt so that you can manage the recorded files on qn SD card. For more information about Local storage, please refer to page 135. If you click the View button for a Network storage, a file directory window will prompt for you to view recorded data on Network storage. For detailed illustration, please refer to the next page.
- Create folders by date, time, and hour automatically: If you select this item, the system will automatically create folders by the date when video footages are stored onto the networked storage.

The following is an example of a file destination with video clips:

Click to delete selected items

### Click 20150120 to open the directory:

### The format is: HH (24r)

Click to open the file list for that hour

< 07 <u>08 09 10 11 12 13 14 15 16 17 ≥</u>

C	Delete all Back					

### The format is: File name prefix + Minute (mm)

You can set up the file name prefix on Add media page. Please refer to next page for detailed information.

### Add media

Click **Add media** to open the media setting window. You can specify the type of media that will be sent when a trigger is activated. A total of 5 media settings can be configured. There are three choices of media types available: Snapshot, Video Clip, and System log. Select the item to display the detailed configuration options. You can configure either one or all of them.

Add server 🔍 Add media
Media name:
Media type
Attached media:
Snapshot
Source: Stream 1 💌
Send 1 pre-event image(s) [0~7]
Send 1 post-event image(s) [0~7]
File name prefix: Snapshot_
Add date and time suffix to file name
Video clip
System log
Save media Close

#### <u>Media type - Snapshot</u>

Select to send snapshots when a trigger is activated.

- Media name: Enter a name for the media setting.
- Source: Select to take snapshots from any of the video streams.
- Send □ pre-event images

The Network Camera has a buffer to temporarily hold data up to a certain limit. Enter a number to decide how many images to capture before a trigger is activated. Up to 7 images can be generated.

■ Send □ post-event images

Enter a number to decide how many images to capture after a trigger is activated. Up to 7 images can be generated.

For example, if both the Send pre-event images and Send post-event images are set to 7, a total of 15 images can be generated after a trigger is activated.

#### ■ File name prefix

Enter the text that will be appended to the front of the file name.

Add date and time suffix to the file name

Select this option to add a date/time suffix to the file name. For example:

Snapshot_20150513_100341		
↑	↑	
File name prefix	Date and time suffix The format is: YYYYMMDD_HHMMSS	

Click Save media to enable the settings.

Note that after you set up the first media server, a new column for media server will automatically display on the Media list. If you wish to add more media options, click **Add media**.

### Media type - Video clip

Select to send video clips when a trigger is activated.

Media 1	буре
Attached	media:
© s	napshot
V	ideo Clip
	Source: Stream 1 💌
	Pre-event recording: 0 seconds [0~9]
	Maximum duration: 5 seconds [1~20]
	Maximum file size: 500 Kbytes [50~4096]
	File name prefix: Video Clip_
© S	ystem log
	Save media Close

- Media name: Enter a name for the media setting.
- Source: Select a video stream as the source of video clip.
- Pre-event recording

The Network Camera has a buffer to temporarily hold data up to a certain limit. Enter a number to decide the duration of recording before a trigger is activated. Up to 9 seconds can be set.

Maximum duration

Specify the maximum recording duration in seconds. The duration can be up to 10 seconds. For example, if pre-event recording is set to five seconds and the maximum duration is set to ten seconds, the Network Camera continues to record for another 4 seconds after a trigger is activated.

Maximum file size

Specify the maximum file size allowed. Some users may need to stitch the video clips together when searching and packing up forensic evidence.

■ File name prefix

Enter the text that will be appended to the front of the file name.

For example:

Click Save media to enable the settings.

### Media type - System log

Select to send a system log when a trigger is activated.

Media name: System log	
Media Type	
Attached media:	
Snapshot	
Video Clip	
System log	
	Save media Close

Click **Save media** to enable the settings, then click **Close** to exit the page.

<u>Snapshot</u>	S	napsi	not								Delete
Video clip	V	ideoc	lip								Delete
System log	sy	stem	log								Delete
Add											
Customized	l script										
Name		Dat	е		Ti	ne					
Add											

Please see the example of the Event setting page below:

When the Event Status is <u>ON</u>, the event configuration above is triggered by motion detection, the Network Camera will automatically send snapshots via e-mail.

If you want to stop the event trigger, you can click on the <u>ON</u> button to turn it to <u>OFF</u> status or click the **Delete** button to remove the event setting.

To remove a server setting from the list, select a server name from the drop-down list and click **Delete**. Note that you can only delete a server setting when it is not applied in an existing event setting.

To remove a media setting from the list, select a media name from the drop-down list and click **Delete**. Note that you can only delete a media setting when it is not applied in an existing event setting.

### **Customized Script**

This function allows you to upload a sample script (.xml file) to the webpage, which will save your time on configuring the settings. Please note that there is a limited number of customized scripts you can upload; if the current amount of customized scripts has reached the limit, an alert message will prompt. If you need more information, please contact VIVOTEK technical support.

### **Applications > Motion detection**

This section explains how to configure the Network Camera to enable motion detection. A total of 5 motion detection windows can be configured.

Follow the steps below to enable motion detection:

- 1. Click New to add a new motion detection window.
- 2. In the Window Name text box, enter a name for the motion detection window.
  - Use 4 mouse clicks to designate a detection window. You can change the window shape by dragging the corner marks to a preferred location.
  - Drag the item size tab to change the minimum size of item to trigger an alarm. An item size box will appear in the center of screen for your reference (in semi-transparent red). An intruding object must be larger than the Item size to trigger an alarm. Change the item size according to the live view.
  - To delete a window, click the X mark on the right of the window name.
- 3. Define the sensitivity to moving objects by moving the Sensitivity slide bar. Note that a high sensitivity is prone to produce false alarms such as the fast changes of light (such as day/night mode switch, turning lights on/off). A movement must persist longer than 0.3 second for the motion to be detected.
- 4. Click Save to enable the settings.

[2] Enable motion detection

5. Select Enable motion detection to enable this function.

For example:

rinal office mode	Profile snode		
	06B	Window name Motion1 060 Item scar 17	н
Bensiduty 60%			

The Percentage Indicator will rise or fall depending on the variation between sequential images. When motions are detected by the Network Camera and are considered to exceed the preset threshold, the red bar rises. Meanwhile, the motion detection window will be outlined in red.

Photos or videos can be captured instantly and configured to be sent to a remote recepient (via an Email or FTP server). For more information on how to configure an event setting, please refer to Event settings on page 106.

A green bar indicates that even though motions have been detected, the event has not been triggered because the image variations still fall under the preset threshold.

If you want to configure other motion detection settings for day/night/schedule mode (e.g., for a different lighting condition), please click **Profile mode** to open the Motion Detection Profile Settings page as shown below. Another three motion detection windows can be configured on this page.

	- Internet	Window name	1.00
	06B	Motion1	88
		Enable to apply these	e settings at
		Night mode	0.000
0		Schedule mode [hi	h:mm]
Sensitivity: 80%	<u> </u>		

Please follow the steps beolw to set up a profile:

- 1. Create a new motion detection window.
- 2. Click the **Profile mode** tab.
- 3. Select the applicable Schedule mode. Please manually enter a time range.
- 4. Click **Save** to enable the settings and click **Close** to exit the page.

This motion detection window will also be displayed on the Event Settings page. You can go to **Event** > **Event settings** > **Trigger** to select it as a trigger source. Please refer to page 131 for detailed information.

► How does motion detection work?

There are two motion detection parameters: Sensitivity and Min. Item Size. As illustrated above, frame A and frame B are two sequential images. Pixel differences between the two frames are detected and highlighted in gray in which the sensitivity setting will take effect. Sensitivity is a value that expresses the sensitivity to moving objects. A higher sensitivity setting allows camera to detect slight movements while a lower sensitivity setting will neglect them.

The minimum item size is a threshold value that determines how many "alerted pixels" can trigger an event. When the size of an intruding object is larger than the minimum size, and its movement persist for 0.3 second, the motion is judged to exceed the defined threshold; and the motion window will be outlined in red. With a large minimum item size, the size of moving object in frame C is considered as smaller than the minimum item size, no motion alarm is triggered. With a smaller minimum item size, the same moving object in frame D triggers the alarm.

For applications that require a high level of security management, it is suggested to use **higher** sensitivity settings. However, a higher sensitivity level can also produce false alarms due to fast light changes when switching between the day and night modes, AE switch, turning the light on or off, etc.

### Applications > DI and DO

Digital input	
Normal status:	e High low
Current status:	High
Digital output	
Normal status:	💿 Open 💿 Grounded
Current status:	Open
	Save

<u>Digital input</u>: Select High or Low as the Normal status for the digital input. Connect the digital input pin of the Network Camera to an external device to detect the current connection status.

<u>Digital output</u>: Select Grounded or Open to define the normal status for the digital output. Connect the digital output pin of the Network Camera to an external device to determine the current status.

Set up the event source as DI on **Event > Event settings > Trigger.** Please refer to page 107 for detailed information.

### **Applications > Tampering detection**

This section explains how to set up camera tamper detection. With tamper detection, the camera is capable of detecting incidents such as **redirection**, **blocking or defocusing**, or even **spray paint**.

Camera tampering detection	
Tampering detection	
Trigger duration 10 seconds [10~600]	
Trigger threshold 12 [0~100]	
Image too dark detection	
Trigger duration 2 seconds [1~10]	
Trigger threshold 15 [0~100]	
Image too bright detection	
Trigger duration 2 seconds [1~10]	
Trigger threshold 15 [0~100]	
Image too blurry detection	
Trigger duration 7 seconds [1~10]	
Trigger threshold 12 [0~100]	
	Save

Please follow the steps below to set up the camera tamper detection function:

- Enter the tamper trigger duration. (10 sec. ~ 10 min.) The tamper alarm will be triggered only when the tampering factor (the difference between current frame and pre-saved background) exceeds the trigger threshold. Conditions such as image too dark, too bright, or too blurry (defocused) can also be configured as tampering conditions.
- 2. You can configure Tampering Detection as a trigger element to the proactive event configurations in Event -> Event settings -> Trigger. For example, when the camera is tampered with, camera can be configured to send pre- and post-event video clips to a networked storage device. Please refer to page 108 for detailed information.

### **Applications > Audio detection**

Audio detection, along with video motion detection, is applicable in the following scenarios:

- 1. Detection of activities not covered by camera view, e.g., a loud input by gun shots or breaking a door/window.
- 2. A usually noisy environment, such as a factory, suddenly becomes quiet due to a breakdown of machines.
- 3. A PTZ camera can be directed to turn to a preset point by the occurrence of audio events.
- 4. Dark environments where video motion detection may not function well.

90			٨		Alarm Level
80 70		- ~~	~		
60	$) \cup_{\neg} ($	)	$\sim$	$\geq$	
50	V			han	
30					
20					
10					

The red circles indicate where the audio alarms can be triggered when breaching or falling below the preset threshold.

How to configure Audio detection:

- 1. Once the Audio detection window is opened, the current sound input will be interactively indicated by a fluctuating yellow wave diagram.
- 2. Use a mouse click to drag the Alarm level tab to a preferred location on the slide bar.
- 3. Select the "Enable audio detection" checkbox and click Save to enable the feature.

- 1. Note that the volume numbers (0~100) on the side of wave diagram does not represent decibel (dB). Sound intensity level has already been mapped to preset values. You can, however, use the real-world inputs at your installation site that are shown on the wave diagram to configure an alarm level.
- 2. To configure this feature, you must not mute the audio in **Configuration > Media > Audio**. The default of the camera can be muted due to the lack of an internal microphone. An external microphone is provided by users.

You can use the **Profile** window to configure a different Audio detection setting. For example, a place can be noisy in the day time and become very quiet in the night.

- 1. Click on the **Enable this profile** checkbox. Once the Audio detection window is opened, the current sound input will be interactively indicated by a fluctuating yellow wave diagram.
- 2. Use a mouse click to drag the **Alarm level** tab to a preferred location on the slide bar.
- 3. Select the **Day**, **Night**, or **Schedule** mode check circles. You may also manually configure a period of time during which this profile will take effect.
- 4. Click **Save** and then click **Close** to complete your configuration.

100	
90	Alarm Lev
80	Volume
70	
60	
50	
40	
30	
20	
10	
0	
General settings           Image: Setting	
Day mode	
🖻 Night mode	
Schedule mode	
S Concade mode	

- If the Alarm level and the received volume are set within a range of 20% on the wave diagram, frequent alarms will be triggered. It is recommended to set the Alarm level farther apart from the detected sound level.
- To configure and enable this feature, you must not configure video stream #1 into Motion JPEG. If an external microphone input is connected and recording of audio stream is preferred, audio stream is transmitted between camera and viewer/recording station along with stream #1.
- Refer to page 70 for Audio settings, and page 65 for video streaming settings.

Applications > Package management - a.k.a., VADP (VIVOTEK Application Development Platform)

Оргоад раскаде			
Select file		Browse Upload	
- Resource status			
🐨 CPU Status:			
CPU loading:	31 %		
🐭 Storage status:			
Storage size: 33028 I	KBytes Free size:	30816 KBytes	
Memory status:			
Package list			
Module name	Vendor	Version Status License	
Backup Reload	Restore	Start Stop	

Users can store and execute VIVOTEK's or 3rd-party software modules onto the camera's flash memory or SD card. These software modules can apply in video analysis for intelligent video applications such as license plate recognition, object counting, or as an agent for edge recording, etc.

- Once the software package is successfully uploaded, the module configuration (vadp. xml) information is displayed. When uploading a module, the camera will examine whether the module fits the predefined VADP requirements. Please contact our technical support or the vendor of your 3rd-party module for the parameters contained within.
- Users can also run VIVOTEK's VADP packages as a means to access updated functionality instead of replacing the entire firmware.
- Note that for some cameras the flash is too small to hold VADP packages. These cameras will have its "Save to SD card" checkbox selected and grayed-out for all time.
- The file system of SD card (FAT32) does not support soft (symbolic) link. It will return failure if your module tries to create soft links on SD card.

To utilize a software module, acquire the software package and click **Browse** and **Upload** buttons. The screen message for a successful upload is shown below:

To start a module, select the checkcircle in front, and click the Start button.

	Package list					
	Module name	Vendor	Version	Status	License	Ŧ
$\bigcirc$	Hello World	ABC	1.0.0	ON	yes	
	Backup Reload	Restore	Sta	art	Stop	

If you should need to remove a module, select the checkcircle in front and then click the **Stop** button. By then the module status will become **OFF**, and the **X** button will appear at the end of the row. Click on the **X** button to remove an existing module.

Packa	ge list					
	Module name	Vendor	Version	Status	License	±
۲	Hello World	ABC	1.0.0	ON	no	
Ва	ckup Reload	Restore	Sta	art	Stop	

When prompted by a confirm message, Click **Yes** to proceed.

網頁訊息	
?	Do you want to delete the VADP module?
	Yes No

Note that the actual memory consumed while operating the module will be indicated on the **Memory status** field. This helps determine whether a running module has consumed too much of system resources.

On the License page, use the Manual or Automatic to register and activate the license for using VIVOTEK's VADP modules. The Automatic method requires an Internet connection. Without Internet connection, you should acquire the license key elsewhere, and manually upload to the network camera.

Follow the onscreen instruction on VIVOTEK's website for the registration procedure.

	Status	License

### **Recording > Recording settings**

This section explains how to configure the recording settings for the Network Camera.

### **Recording Settings**

Please remember to format your SD card via the camera's web console (in the Local storage . SD card management page) when using it for the first time. Please refer to page 135 for detailed information.

### **Recording Settings**

Click **Add** to open the recording setting window. On this page, you can define the adaptive recording, recording source, recording schedule, and recording capacity. A total of 2 recording settings can be configured.

Recording name: video	
Enable this recording	
With adaptive recording	g
Pre-event recording	): 5 seconds [0~9]
Post-event recordin	g: 5 seconds [0~10]
Priority: Normal 💌	
Source: Stream 1 💌	
	Trigger
1. Trigger 🧼	Schedule
n. mgger	🗸 Sun 🗸 Mon 🖉 Tue 🕼 Wed 🕼 Thu 🖉 Fri 🖉 Sat
	Time
*	Always
2. Destination	From 00:00 to 24:00 [hh:mm]
	Network fail
Note: To enable recording	notification please configure <u>Event</u> first
	Close Save

- Recording name: Enter a name for the recording setting.
- Enable this recording: Select this option to enable video recording.
- With adaptive recording:

Select this option will activate the frame rate control according to alarm trigger. The frame control means that when there is a triggered alarm, the frame rate will raise up to the value you've configured on the Video quality page. Please refer to page 66 for more information. If you enable adaptive recording on a camera, only when an event is triggered on Camera A will the server record the full frame rate streaming data; otherwise, it will only request the I frame data during normal monitoring, thus effectively saves bandwidths and storage space.

The alarm trigger includes: motion detection and DI detection. Please refer to Event Settings on page 106.

Pre-event recording and post-event recording

The Network Camera has a buffer that temporarily holds data for a period of time. Therefore, when an event occurs, the camera can restrieve image frames taken several seconds ago. Enter a number to define the duration of recording before and after a trigger is activated.

- Priority: Select the relative importance of this recording (High, Normal, or Low). Recording with a higher priority setting will be executed first.
- Source: Select a video stream as the recording source.

► To enable recording notification please configure *Event settings* first . Please refer to page 106.

Please follow the steps below to set up the recording.

<u>1. Trigger</u> Select a trigger source.

<b>T</b> ( ) ( )	
Trigger	
Schedule	
🗸 Sun 🖉 Mon 🖉 Tue 🖉 Wed 🖉 Thu 🖉 Fri 🖉 Sat	
Time	
Always	
From 00:00 to 24:00 [hh:mm]	
Network fail	

- Schedule: The server will start to record files on the local storage or network storage (NAS).
- Network fail: Since network fail, the server will start to record files on the local storage (SD card).

### 2. Destination

You can select the SD card or network storage (NAS) for the recorded video files. If you have not configured a NAS server, see details in the following.

	Destination
1. Trigger	Destination: NAS
•	Capacity:
	Intire free space
	Reserved space: 100 Mbytes
2. Destination	Enable cyclic recording
	Recording file management
	Maximum duration: 1 minutes [1~30]
	Maximum file size: 100 MB [100~2000]
	File name prefix:

### NAS server

Click **Add NAS server** to open the server setting window and follow the steps below to set up: 1. Fill in the information for your server.

For example:

1. Trigger	Destination: SD  Add NAS server	
2. Destination	Server name: NAS Network storage path (\\server name or IP addr	ess∖folder name)
	<ul> <li>Network storage</li> <li>Network storage location: <u>\\\192.168.5.12\\NAS</u></li> <li>(For example: \\my_nas\disk\folder)</li> <li>Workgroup: vivotek</li> <li>User name: ritiali</li> <li>Password: •••••••</li> </ul>	
	Test Close 2 4	Save server

User name and password for your server

2. Click **Test** to check the setting. The result will be shown in the pop-up window.

🖄 http://192.168.5.151/cgi-bin/admin/testserver 🔲 🗖 🔀	🖄 http://192.168.5.151/cgi-bin/a	dmin/testserver 📰 🗖 🔯
Mount successfully. Thanks	Mount failed.	
Done 🔮 Internet	Done	🔮 Internet

If successful, you will receive a test.txt file on the network storage server.

1. Trigger		Destination: NAS				
		Capacity:				
		# Entre	free space	e .		
		C Reserved space 100				
2. Destination		Enable cyclic r	ecording			
		Recording file m	anagem	ent		
		Maximum duration	1	moutes [1-30]		
		Maximum file size:	100	MB [100-900]		
		File name prefix:				

- Capacity: You can choose either the entire free space available or limit the reserved space. The recording size limit must be larger than the reserved amount for cyclic recording.
- Enable cyclic recording: If you check this item, when the maximum capacity is reached, the oldest file will be overwritten by the latest one. The reserved amount is reserved for the transaction stage when the storage space is about to be full and new data arrives. The minimum for the Reserved space must be larger than 15 MegaBytes.
- Recording file management: You can manually assign the Maximum duration and the Maximum file size for each recording footage. You may need to stitch individual files together under some circumstances. You may also designate a file name prefix by filling in the responsive text field.
- File name prefix: Enter the text that will be appended to the front of the file name.

f you want to enable recording notification, please click *Event* to configure event triggering settings. Please refer to **Event > Event settings** on page 106 for more details.

When completed, select **Enable this recording**. Click **Save** to enable the setting and click **Close** to exit this page. When the system begins recording, it will send the recorded files to the network storage. The new recording name will appear in the drop-down list on the recording page as shown below.

To remove a recording setting from the list, select a recording name from the drop-down list and click **Delete**.

Record	ing set	ings										
Name	Status	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Time	Source	Destination	Delete
recording			V <u>) test</u>	V	V	V	V	V	00:00~24:00	stream1	<u>NAS</u>	Delete

- Click recording (Name): Opens the Recording Settings page to modify.
- Click ON (Status): The Status will become OFF and stop recording.
- Click NAS (Destination): Opens the file list of recordings as shown below. For more information about folder naming rules, please refer to page 113 for details.

<ul> <li>⊇0150210</li> <li>⊇0150211</li> </ul>				
<u>20150212</u>

### Local storage > SD card management

### NOTE:

- It is recommended to turn OFF the recording activity before you remove an SD card from the camera.
- The lifespan of an SD card is limited. Regular replacement of the SD card is necessary.
- Camera filesystem takes up several megabytes of memory space. The storage space taken by filesystem cannot be used for recording.
- Using an SD card that already contains data recorded by another device should not be used in this camera.
- Please do not modify or change the folder names in the SD card. That may result in camera malfunctions.

This section explains how to manage the local storage on the Network Camera. Here you can view SD card status, and implement SD card control.

### **SD card staus**

This column shows the status and reserved space of your SD card. Please remember to format the SD card when using for the first time.

SD card status						
SD card status: Detach	ned n	o SD card				
Total size: 0 KBytesFree size:0 KBytes						
Used size:0 KBytesUse (%): 0 %						
			Format			
- SD card status						
SD caru status						
SD card status: Ready						
File system: FAT32						
Total size:	15323496 KBytes	Free size:	15087976 KBytes			
Used size:	235520 KBytes	Use (%):	1.537 %			

### **SD** card format

The Linux kernel EXT4 file system format applies to SD card larger than 32GB. However, if EXT4 is applied, the computers running Windows will not be able to access the contents on the SD card.

Format

### **SD card control**

SD card control	
Enable cyclic storage	
Enable automatic disk cleanup	
Maximum duration for keeping files: 7 days	
	Save

- Enable cyclic storage: Check this item if you want to enable cyclic recording. When the maximum capacity is reached, the oldest file will be overwritten by the latest one.
- Enable automatic disk cleanup: Check this item and enter the number of days you wish to retain a file. For example, if you enter "7 days", the recorded files will be stored on the SD card for 7 days.

Click **Save** to enable your settings.

### Local storage > Content management

This section explains how to manage the content of recorded videos on the Network Camera. Here you can search and view the records and view the searched results.

### **Searching and Viewing the Records**

This column allows the user to set up search criteria for recorded data. If you do not select any criteria and click **Search** button, all recorded data will be listed in the **Search Results** column.

Search					
Trigger type					
Backup	System b	oot	🗌 Digital i	nout	
				nput

<ul> <li>Video clip</li> </ul>	<ul> <li>Snapsh</li> </ul>	ot	⊖ Tex	t	
Time					
Search for last	1 minute(s) hours	days we	eeks		
From:	2015/05/18		2 36	PM	
to:	2015/05/25		2 36	PM	
					Q Search

- File attributes: Select one or more items as your search criteria.
- Trigger time: Manually enter the time range you want to search for contents created at a specific point in time.

Click **Search** and the recorded data corresponding to the search criteria will be listed in **Search Results** window.

### **Search Results**

The following is an example of search results. There are four columns: Trigger time, Media type, Trigger type, and Locked. Click = to sort the search results in either direction.

## Numbers of entries displayed on one page

	Trigger type	Starting time	Ending time	
to SD	Periodically	Today at 3:45 PM	Today at 3:58 PM	Click to open a live view
to SD	Periodically	Today at 3:58 PM		
test	Motion	Today at 3:45 PM	Today at 3:45 PM	
test	Motion	Today at 3:49 PM	Today at 3:49 PM	
est	Motion	Today at 3:49 PM	Today at 3:49 PM	
est	Motion	Today at 3:50 PM	Today at 3:50 PM	
iest	Motion	Today at 3:50 PM	Today at 3:50 PM	~
te te	o SD est est est est	est Motion est Motion est Motion est Motion	o SDPeriodicallyToday at 3:58 PMestMotionToday at 3:45 PMestMotionToday at 3:49 PMestMotionToday at 3:49 PMestMotionToday at 3:50 PM	o SDPeriodicallyToday at 3:58 PMestMotionToday at 3:45 PMToday at 3:45 PMestMotionToday at 3:49 PMToday at 3:49 PMestMotionToday at 3:49 PMToday at 3:49 PMestMotionToday at 3:50 PMToday at 3:50 PM

Play: Click on a search result which will highlight the selected item. A Play window will appear on top for immediate review of the selected file. For example:

- Download: Click on a search result to highlight the selected item in purple as shown above. Then click the **Download** button and a file download window will pop up for you to save the file.
- JPEGs to AVI: This functions only applies to "JPEG" format files such as snapshots. You can select several snapshots from the list, then click this button. Those snapshots will be converted into an AVI file.

Lock/Unlock: Select the checkbox in front of a desired search result, then click this button. The selected items will become Locked, and they will not be deleted during cyclic recording. You can click again to unlock the selections. For example:

Periodically Periodically	Today at 3:45 PM	Today at 3:58 PM	
Periodically			A
· -·····)	Today at 3:58 PM		
Motion	Today at 3:45 PM	Today at 3:45 PM	
Motion	Today at 3:49 PM	Today at 3:49 PM	
Motion	Today at 3:49 PM	Today at 3:49 PM	
Motion	Today at 3:50 PM	Today at 3:50 PM	
Motion	Today at 3:50 PM	Today at 3:50 PM	~
	Motion Motion Motion	Motion     Today at 3:49 PM       Motion     Today at 3:49 PM       Motion     Today at 3:50 PM       Motion     Today at 3:50 PM	Motion       Today at 3:49 PM       Today at 3:49 PM         Motion       Today at 3:49 PM       Today at 3:49 PM         Motion       Today at 3:50 PM       Today at 3:50 PM         Motion       Today at 3:50 PM       Today at 3:50 PM         Motion       Today at 3:50 PM       Today at 3:50 PM

■ Remove: Select the desired search results, then click this button to delete the files.

# Appendix

### **URL Commands for the Network Camera**

### 1. Overview

For some customers who already have their own web site or web control application, the Network Camera/Video Server can be easily integrated through URL syntax. This section specifies the external HTTP-based application programming interface. The HTTP-based camera interface provides the functionality to request a single image, control camera functions (PTZ, output relay etc.), and get and set internal parameter values. The image and CGI-requests are handled by the built-in Web server.

### 2. Style Convention

In URL syntax and in descriptions of CGI parameters, text within angle brackets denotes content that is to be replaced with either a value or a string. When replacing the text string, the angle brackets should also be replaced. An example of this is the description of the name for the server, denoted with <servername> in the URL syntax description below, that is replaced with the string myserver in the URL syntax example further down in the page.

URL syntax is denoted with the word "Syntax:" written in bold face followed by a box with the referenced syntax as shown below. For example, name of the server is written as <servername> and is intended to be replaced with the name of the actual server. This can either be a name, e.g., "mywebcam" or "thecam. adomain.net" or the associated IP number for the server, e.g., 192.168.0.220.

Syntax:

http://<servername>/cgi-bin/viewer/video.jpg

Description of returned data is written with "**Return:**" in bold face followed by the returned data in a box. All data is returned in HTTP format, i.e., each line is separated with a Carriage Return and Line Feed (CRLF) printed as \r\n.

Return:

#### HTTP/1.0 <HTTP code> <HTTP text>\r\n

URL syntax examples are written with "**Example:**" in bold face followed by a short description and a light grey box with the example.

**Example:** request a single snapshot image

http://mywebserver/cgi-bin/viewer/video.jpg

## 3. General CGI URL Syntax and Parameters

CGI parameters are written in lower-case and as one word without any underscores or other separators. When the CGI request includes internal camera parameters, these parameters must be written exactly as they are named in the camera or video server. The CGIs are organized in functionally-related directories under the cgi-bin directory. The file extension .cgi is required.

Syntax:

```
http://<servername>/cgi-bin/<subdir>[/<subdir>...]/<cgi>.<ext>
[?<parameter>=<value>[&<parameter>=<value>...]]
```

**Example:** Set digital output #1 to active

http://mywebserver/cgi-bin/dido/setdo.cgi?do1=1

## 4. Security Level

SECURITY LEVEL	SUB-DIRECTORY	DESCRIPTION
0	anonymous	Unprotected.
1 [view]	anonymous, viewer,	1. Can view, listen, talk to camera.
	dido, camctrl	2. Can control DI/DO, PTZ of the camera.
4 [operator]	anonymous, viewer,	Operator access rights can modify most of the camera's
	dido, camctrl, operator	parameters except some privileges and network options.
6 [admin]	anonymous, viewer,	Administrator access rights can fully control the camera's
	dido, camctrl, operator,	operations.
	admin	
7	N/A	Internal parameters. Unable to be changed by any external
		interfaces.

## 5. Get Server Parameter Values

**Note:** The access right depends on the URL directory. **Method:** GET/POST

Syntax:
http://< <i>servername</i> >/cgi-bin/anonymous/getparam.cgi?[< <i>parameter</i> >]
[& <parameter>]</parameter>
http://< <i>servername</i> >/cgi-bin/viewer/getparam.cgi?[< <i>parameter</i> >]
[& <parameter>]</parameter>
http://< <i>servername</i> >/cgi-bin/operator/getparam.cgi?[< <i>parameter</i> >]
[& <parameter>]</parameter>
http://< <i>servername</i> >/cgi-bin/admin/getparam.cgi?[< <i>parameter</i> >]
[& <parameter>]</parameter>

Where the *<parameter>* should be *<group>*[\_*<name>*] or *<group>*[.*<name>*]. If you do not specify any parameters, all the parameters on the server will be returned. If you specify only *<group>*, the parameters oftherelated group will be returned.

When querying parameter values, the current parameter values are returned.

A successful control request returns parameter pairs as follows:

Return:
HTTP/1.0 200 OK\r\n
Content-Type: text/html\r\n
Context-Length: <length>\r\n</length>
\r\n
<pre><parameter pair=""></parameter></pre>
where <parameter pair=""> is</parameter>
<parameter>=<value>\r\n</value></parameter>
[ <parameter pair="">]</parameter>

<length> is the actual length of content.

Example: Request IP address and its response

Request:

#### http://192.168.0.123/cgi-bin/admin/getparam.cgi?network\_ipaddress

Response: HTTP/1.0 200 OK\r\n Content-Type: text/html\r\n Context-Length: 33\r\n \r\n network.ipaddress=192.168.0.123\r\n

## 6. Set Server Parameter Values

**Note:** The access right depends on the URL directory. **Method:** GET/POST

Syntax:

```
http://<servername>/cgi-bin/anonymous/setparam.cgi? <parameter>=<value>
[&<parameter>=<value>...][&update=<value>][&return=<return page>]
```

http://<*servername*>/cgi-bin/viewer/setparam.cgi? <*parameter*>=<value> [&<parameter>=<value>...][&update=<value>] [&return=<return page>]

http://<*servername*>/cgi-bin/operator/setparam.cgi? <*parameter*>=<*value*> [&<parameter>=<value>...][&update=<value>] [&return=<return page>]

http://<*servername*>/cgi-bin/admin/setparam.cgi? <*parameter*>=<*value*> [&<parameter>=<value>...][&update=<value>] [&return=<return page>]

PARAMETER	VALUE	DESCRIPTION
<group>_<name></name></group>	value to assigned	Assign < <i>value</i> > to the parameter < <i>group</i> >_< <i>name</i> >.
update	<boolean></boolean>	Set to 1 to update all fields (no need to update parameter in each group).
return	<return page=""></return>	Redirect to the page < <i>return page</i> >after the parameter is assigned. The < <i>return page</i> >can be a full URL path or relative path according to the current path. If you omit this parameter, it will redirect to an empty page. (Note: The return page can be a general HTML file(.htm, .html) or a VIVOTEK server script executable (.vspx) file. It cannot be a CGI commandor have any extra parameters.This parameter must be

placed at the end of the parameter list	
---	--

Return:

HTTP/1.0 200 OK\r\n	
Content-Type: text/html\r\n	
Context-Length: <length>\r\n</length>	
\r\n	
<pre><parameter pair=""></parameter></pre>	
where <parameter pair=""> is</parameter>	

<parameter>=<value>\r\n

[<parameter pair>]

Only the parameters that you set and are readable will be returned.

**Example:** Set the IP address of server to 192.168.0.123:

Request:

http://myserver/cgi-bin/admin/setparam.cgi?network\_ipaddress=192.168.0.123

Response: HTTP/1.0 200 OK\r\n Content-Type: text/html\r\n Context-Length: 33\r\n \r\n network.ipaddress=192.168.0.123\r\n

## 7. Available parameters on the server

Valid values:

VALID VALUES	DESCRIPTION
string[ <n>]</n>	Text strings shorter than 'n' characters. The characters ",',<,>,& are invalid.
string[n~m]	Text strings longer than `n' characters and shorter than `m' characters. The
	characters ",',<,>,& are invalid.
password[ <n>]</n>	The same as string but displays'*' instead.
<integer></integer>	Any single integer number in 32-bits.
	The range is -2147483648~2147483647.
<positive integer=""></positive>	Any single positive integer number in 32-bits.
	The range is 1~ 4294967295.
<m> ~ <n></n></m>	Any number between 'm' and 'n'.
domain name[ <n>]</n>	A string limited to a domain name shorter than 'n' characters (eg. www.ibm.com).
email address [ <n>]</n>	A string limited to an email address shorter than 'n' characters (eg.
	joe@www.ibm.com).
<ip address=""></ip>	A string limited to an IP address (eg. 192.168.1.1).
<mac address=""></mac>	A string limited to contain a MAC address without hyphens or colons.
<boolean></boolean>	A boolean value of 1 or 0 represents [Yes or No], [True or False], [Enable or
	Disable].
<value1>,</value1>	Enumeration. Only given values are valid.
<value2>,</value2>	
<value3>,</value3>	
blank	A blank string.
everything inside <>	A description
integer primary key	SQLite data type. A 32-bit signed integer. The value is assigned a unique integer by
	the server.
<text></text>	SQLite data type. The value is a text string, stored using the database encoding
	(UTF-8, UTF-16BE or UTF-16-LE).
<coordinate></coordinate>	x, y coordinate (eg. 0,0)
<window size=""></window>	window width and height (eg. 800x600)
<w,h></w,h>	The format for coordinate in 2D.
	W is the pixel number of width.
	H is the pixel number of height.
	EX: (176,144)
<wxh></wxh>	The format for resolution.

	W is the pixel number of width.	
	H is the pixel number of height.	
	Ex: 1920x1080, 2048x1536	

NOTE: The camera should not be restarted when parameters are changed.

# 7.1 system

Group: system

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
hostname	string[64]	1/6	Host name of server
			(Network Camera,
			Wireless Network Camera,
			Video Server,
			Wireless Video Server).
ledoff	<boolean></boolean>	6/6	Turn on (0) or turn off (1) all led indicators.
date	<yyyy dd="" mm="">,</yyyy>	6/6	Current date of system. Set to 'keep' to keep
	keep,		date unchanged. Set to 'auto' to use NTP to
	auto		synchronize date.
time	<hh:mm:ss>,</hh:mm:ss>	6/6	Current time of the system. Set to 'keep' to
	keep,		keep time unchanged. Set to 'auto' to use NTP
	auto		to synchronize time.
datetime	<mmddhhmmyyyy< td=""><td>6/6</td><td>Another current time format of the system.</td></mmddhhmmyyyy<>	6/6	Another current time format of the system.
	.ss>		
ntp	<domain name="">,</domain>	6/6	NTP server.
	<ip address="">,</ip>		*Do not use "skip to invoke default server" for
	<blank></blank>		default value.

# 7.6 network

#### Group: network

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
preprocess	<positive integer=""></positive>	6/6	An 32-bit integer, each bit can be set
			separately as follows:
			Bit 0 => HTTP service;
			Bit 1=> HTTPS service;
			Bit 2=> FTP service;
			Bit 3 => Two way audio and RTSP Streaming
			service;
			To stop service before changing its port
			settings. It's <b>recommended</b> to set this
			parameter when change a service port to the
			port occupied by another service currently.

		1	1
			Otherwise, the service may fail.
			Stopped service will auto-start after changing
			port settings.
			Ex:
			Change HTTP port from 80 to 5556, and
			change RTP port for video from 5556 to 20480.
			Then, set preprocess=9 to stop both service
			first.
			"/cgi-bin/admin/setparam.cgi?
			network_preprocess=9&network_http_port=
			5556& network_rtp_videoport=20480"
type	lan,	6/6	Network connection type.
	рррое		
resetip	<boolean></boolean>	6/6	1 => Get ipaddress, subnet, router, dns1,
			dns2 from DHCP server at next reboot.
			0 => Use preset ipaddress, subnet, rounter,
			dns1, and dns2.
ipaddress	<ip address=""></ip>	6/6	IP address of server.
subnet	<ip address=""></ip>	6/6	Subnet mask.
router	<ip address=""></ip>	6/6	Default gateway.
dns1	<ip address=""></ip>	6/6	Primary DNS server.
dns2	<ip address=""></ip>	6/6	Secondary DNS server.
wins1	<ip address=""></ip>	6/6	Primary WINS server.
wins2	<ip address=""></ip>	6/6	Secondary WINS server.

## 7.6.2 QOS

### Subgroup of **network: qos\_cos (**capability.protocol.qos.cos > 0)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	6/6	Enable/disable CoS (IEEE 802.1p)
vlanid	1~4095	6/6	VLAN ID
video	0~7	6/6	Video channel for CoS
audio	0~7	6/6	Audio channel for CoS
<product dependent=""></product>			(capability.naudioin > 0)
eventalarm	0~7	6/6	Event/alarm channel for CoS
management	0~7	6/6	Management channel for CoS
eventtunnel	0~7	6/6	Event/Control channel for CoS

#### Subgroup of **network: qos\_dscp** (capability.protocol.qos.dscp > 0)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	6/6	Enable/disable DSCP
video	0~63	6/6	Video channel for DSCP
audio	0~63	6/6	Audio channel for DSCP
			(capability.naudioin > 0)
eventalarm	0~63	6/6	Event/alarm channel for DSCP
management	0~63	6/6	Management channel for DSCP
eventtunnel	0~63	6/6	Event/Control channel for DSCP

## 7.6.3 IPV6

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	6/6	Enable IPv6.
addonipaddress	<ip address=""></ip>	6/6	IPv6 IP address.
addonprefixlen	0~128	6/6	IPv6 prefix length.
addonrouter	<ip address=""></ip>	6/6	IPv6 router address.
addondns	<ip address=""></ip>	6/6	IPv6 DNS address.
allowoptional	<boolean></boolean>	6/6	Allow manually setup of IP address setting.

### Subgroup of **network**: **ipv6** (capability.protocol.ipv6 > 0)

## 7.6.4 FTP

### Subgroup of **network**: **ftp**

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
port	21, 1025~65535	6/6	Local ftp server port.

### 7.6.5 HTTP

### Subgroup of **network**: http

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
port	80, 1025 ~ 65535	1/6	HTTP port.
alternateport	1025~65535	6/6	Alternate HTTP port.
authmode	basic,	1/6	HTTP authentication mode.
	digest		
s<0~(capability_nmediast	string[32]	1/6	Http server push access name for stream N,
ream-1)>_accessname			N= 1~ capability.nmediastream.
<product dependent=""></product>			(capability.protocol.spush_mjpeg =1 and
			capability.nmediastream > 0)
			The value are shown as
			video.mjpg = s0_accessname, (stream1)
			video2.mjpg = s1_accessname, (stream2)
			video3.mjpg = s2_accessname, (stream3)
			video4.mjpg = s3_accessname, (stream4)
			etc.
anonymousviewing	<boolean></boolean>	1/6	Enable anonymous streaming viewing.

## 7.6.6 HTTPS port

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
port	443, 1025 ~ 65535	1/6	HTTPS port.

Subgroup of **network**: **https** (capability.protocol.https > 0)

### 7.6.7 RTSP

Subgroup of **network**: **rtsp** (capability.protocol.rtsp > 0)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
port	554, 1025 ~ 65535	1/6	RTSP port.
			(capability.protocol.rtsp=1)
anonymousviewing	<boolean></boolean>	1/6	Enable anoymous streaming viewing.
authmode	disable,	1/6	RTSP authentication mode.
	basic,		(capability.protocol.rtsp=1)
	digest		
s<0~(capability_nmediast	string[32]	1/6	RTSP access name for stream N, N= $1\sim$
ream-1)>_accessname			capability.nmediastream.
<product dependent=""></product>			(capability.protocol.spush_mjpeg =1 and
			capability.nmediastream > 0)
			The value are shown as
			live.sdp = s0_accessname, (stream1)
			live2.sdp = s1_accessname, (stream2)
			live3.sdp = s2_accessname, (stream3)
			live4.sdp = s3_accessname, (stream4)
			etc.

### 7.6.7.1 RTSP multicast

Subgroup of **network\_rtsp\_s<0~(n-1)>**: **multicast** n is stream count

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
alwaysmulticast	<boolean></boolean>	4/4	Enable always multicast.
ipaddress	<ip address=""></ip>	4/4	Multicast IP address.
videoport	1025 ~ 65535	4/4	Multicast video port.
audioport	1025 ~ 65535	4/4	Multicast audio port.
<product dependent=""></product>			(capability.naudioin > 0)

metadataport	1026~65534	4/4	Multicast metadata port.
ttl	1 ~ 255	4/4	Multicasttime to live value.

## 7.6.8 SIP port

Subgroup of **network**: **sip** (capability.protocol.sip> 0)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
port	1025 ~ 65535	1/6	SIP port.

## **7.6.9 RTP port**

#### Subgroup of **network**: **rtp**

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
videoport	1025 ~ 65535	6/6	Video channel port for RTP.
			(capability.protocol.rtp_unicast=1)
audioport	1025 ~ 65535	6/6	Audio channel port for RTP.
			(capability.protocol.rtp_unicast=1)
metadataport	1025 ~ 65535	6/6	Metadata channel port for RTP.

### 7.6.10 PPPoE

Subgroup of **network**: **pppoe** (capability.protocol.pppoe > 0)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
user	string[128]	6/6	PPPoE account user name.
pass	password[64]	6/6	PPPoE account password.

## 7.7 IP Filter

#### Group: ipfilter

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	6/6	Enable access list filtering.
admin_enable	<boolean></boolean>	6/6	Enable administrator IP address.
admin_ip	string[43]	6/6	Administrator IP address.
maxconnection	1~10	6/6	Maximum number of concurrent streaming
			connection(s).

type	0, 1	6/6	Ipfilter policy :
			0 => allow
			1 => deny
ipv4list_i<0~9>	Single address: <ip< td=""><td>6/6</td><td>IPv4 address list.</td></ip<>	6/6	IPv4 address list.
	address>		
	Network address:		
	<ip <="" address="" td=""><td></td><td></td></ip>		
	network mask>		
	Range		
	address: <start ip<="" td=""><td></td><td></td></start>		
	address - end ip		
	address>		
ipv6list_i<0~9>	string[43]	6/6	IPv6 address list.

# 7.8 Video input

### Group: videoin

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
cmosfreq	50, 60	4/4	CMOS frequency.
			(capability.videoin.type=2)
whitebalance	auto,	4/4	Modes of white balance.
<product dependent=""></product>	manual,		"auto": Auto white balance
	rbgain,		"rbgain": Use rgain and bgain to set white
	widerange,		balance manually.
	outdoor,		"manual": 2 cases:
	indoor,		a. if "rbgain" is not supported, this means
	sodiumauto,		keep current white balance status.
	etc		b. if "rbgain" is supported, "rgain" and
			"bgain" are updated to the current values
	(Available values are		which is got from white balance module. Then,
	listed in		act as rbgain mode
	"capability_image_c		"widerange": Auto Tracing White balance
	<n>_wbmode")</n>		(2000K to 10000K).
			"outdoor": auto white balance mode
			specifically for outdoor.
			"indoor": auto white balance mode
			specifically for indoor.
			"sodiumauto": sodium vapor lamps.

			* Only available when
			"capability_image_c <n>_wbmode" !="-"</n>
exposurelevel	0~12	4/4	Exposure level
		., .	"0,12": This range takes the concept from DC's
			exposure tuning options. The definition is:
			0: EV -2.0
			1: EV -1.7
			2: EV -1.3
			3: EV -1.0
			4: EV -0.7
			5: EV -0.3
			6: EV 0
			7: EV +0.3
			8: EV +0.7
			9: EV +1.0
			10: EV +1.3
			11: EV +1.7
			12: EV +2.0
irismode	fixed, indoor,	4/4	Control DC-Iris mode.
	outdoor	., .	"outdoor": Auto-setting DC-Iris to get best
	<product< td=""><td></td><td>quality, but easy to meet rolling or flicker effect</td></product<>		quality, but easy to meet rolling or flicker effect
	independent>		in indoor environment.
			"indoor": Avoid rolling and flicker effect first.
			" <b>fixed</b> ": Open the iris to maximum.
			* Only available when
			"capability_image_c <n>_iristype"=dciris</n>
enableblc	<boolean></boolean>	4/4	Enable backlight compensation.
<not anymore="" support=""></not>		,	* Not support this parameter anymore when
			the version number (httpversion) is equal or
			greater than 0301a.
			* It's recommanded to use
			"exposurewin_c <n>_mode" to switch on/off</n>
			BLC.
color	0, 1	4/4	0 =>monochrome
	-,	,	1 => color
flip	<boolean></boolean>	4/4	Flip the image.
mirror	<boolean></boolean>	4/4	Mirror the image.
rotate	0,90,180,270	1/4	The rotation angle of image.
			Support only in Rotation mode

			(capability.videoin.c <n>.rotation=1)</n>
ptzstatus	0, <positive integer&gt;</positive 	1/7	A 32-bit integer, each bit can be set separately as follows: Bit 0 => Support camera control function; O(not support), 1(support) Bit 1 => <b>Built-in</b> or <b>external</b> camera; 0 (external), 1(built-in) Bit 2 => Support <b>pan</b> operation; 0(not support), 1(support) Bit 3 => Support <b>tilt</b> operation; 0(not support), 1(support) Bit 4 => Support <b>zoom</b> operation; 0(not support), 1(support) Bit 5 => Support <b>focus</b> operation; 0(not support), 1(support)(SD/PZ/IZ series only)
text	string[64]	1/4	Enclose caption.
imprinttimestamp	<boolean></boolean>	4/4	Overlay time stamp on video.
minexposure <product dependent=""></product>	<pre>&lt;1~32000&gt;, &lt;5~32000&gt;, &lt;1~8000&gt;, &lt;5~8000&gt;, etc. * Available value is listed in "capability_image_c <n>_exposure_min range"</n></pre>	4/4	<pre>Minimum exposure time 1~32000 =&gt; 1s ~ 1/32000s 5~32000 =&gt; 1/5s ~ 1/32000s 1~8000 =&gt; 1s ~ 1/8000s 5~8000 =&gt; 1/5s ~ 1/8000s etc. * Only available when "capability_image_c<n>_exposure_minrange " != "-" * Only valid when "piris_mode"=manual or "irismode"=fixed * Only available when "capability_image_c<n>_exposure_rangetyp e" is "twovalues".</n></n></pre>
maxexposure <product dependent=""></product>	<1~32000>, <5~32000>, <1~8000>, <5~8000>, etc.	4/4	Maximum exposure time 1~32000 => 1s ~ 1/32000s 5~32000 => 1/5s ~ 1/32000s 1~8000 => 1s ~ 1/8000s 5~8000 => 1/5s ~ 1/8000s etc.

	1		1
	* Available value is		
	listed in		* This parameter may also restrict image
	"capability_image_c		frame rate from sensor due to sensor
	<n>_exposure_ma</n>		generates a frame per exposure time. Ex: If
	xrange"		this is set to 1/5s $\sim$ 1/8000s and camera takes
			1/5s on the night, then sensor only outputs 5
			frame/s.
			* Only available when
			"capability_image_c <n>_exposure_maxrang</n>

## 7.8.1 Video input setting per channel

Group: videoin\_c<0~(n-1)> for n channel products, and m is stream number

n denotes the value of "capability\_nvideoin", m denotes the value of "capability\_nmediastream"

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
cmosfreq	50, 60	4/4	CMOS frequency.
			(capability.videoin.type=2)
mode	0 ~	4/4	Indicate the video mode on use.
	"capability_videoin_c <n>_nmode"-1</n>		
whitebalance	auto,	4/4	Modes of white balance.
<product< td=""><td>manual,</td><td></td><td>"auto": Auto white balance</td></product<>	manual,		"auto": Auto white balance
dependent>	rbgain,		"rbgain": Use rgain and bgain to set
	widerange,		white balance manually.
	outdoor,		"manual": 2 cases:
	indoor,		a. if "rbgain" is not supported, this
	sodiumauto,		means keep current white balance
	etc		status.
			b. if "rbgain" is supported, "rgain"
	(Available values are listed in		and "bgain" are updated to the current
	"capability_image_c <n>_wbmode")</n>		values which is got from white balance

	1		
			module. Then, act as rbgain mode
			"widerange": Auto Tracing White
			balance (2000K to 10000K).
			"outdoor": auto white balance mode
			specifically for outdoor.
			"indoor": auto white balance mode
			specifically for indoor.
			"sodiumauto": sodium vapor lamps.
			* Only available when
			"capability_image_c <n>_wbmode" !=</n>
			n_n
rgain	0~100	4/4	Manual set rgain value of gain control
			setting.
			0: Weak <-> 100: Strong
			* Only available when "rbgain" is listed
			in "capability_image_c <n>_wbmode".</n>
			* Only valid when
			"videoin_c <n>_whitebalance" != auto</n>
			* Normalized range.
bgain	0~100	4/4	Manual set bgain value of gain control
			setting.
			0: Weak <-> 100: Strong
			* Only available when "rbgain" is listed
			in "capability_image_c <n>_wbmode".</n>
			* Only valid when
			"videoin_c <n>_whitebalance" != auto</n>
			* Normalized range.
exposurelevel	0~12	4/4	Exposure level
			"0,12": This range takes the concept
			from DC's exposure tuning options.
			The definition is:
			0: EV -2.0
			1: EV -1.7
			2: EV -1.3
			3: EV -1.0
			3: EV -1.0 4: EV -0.7

-		•	
			6: EV 0
			7: EV +0.3
			8: EV +0.7
			9: EV +1.0
			10: EV +1.3
			11: EV +1.7
			12: EV +2.0
exposuremode	auto,	4/4	Select exposure mode.
<product< td=""><td>shutterpriority,</td><td></td><td></td></product<>	shutterpriority,		
dependent>	irispriority,		"auto": Iris, Gain and Shutter
	manual,		Speed(Exposure time) can be set
	etc		automatically.
			"shutterpriority": Adjust with
	(Available options are list in		variable Shutter Speed, auto Iris and
	"capability_image_c <n>_exposure_m</n>		Gain.
	odetype")		"irispriority": Adjust with variable
			Iris, auto Gain and Shutter speed.
			"manual": Adjust with variable
			Shutter, Iris and Gain.
			* We support this parameter when the
			version number (httpversion) is equal
			or greater than 0302a.
irismode	fixed, indoor, outdoor	4/4	Control DC-Iris mode.
	<product dependent=""></product>		"outdoor": Auto-setting DC-Iris to
			get best quality, but easy to meet
			rolling or flicker effect in indoor
			environment.
			"indoor": Avoid rolling and flicker
			effect first.
			"fixed": Open the iris to maximum.
			* Only available when
			"capability_image_c <n>_iristype"=dc</n>
			iris
piris_mode	manual, indoor, outdoor,-	1/4	Control P-Iris mode.
<pre>cproduct</pre>			"outdoor": Auto-setting P-Iris to get
dependent>			best quality, but easy to meet rolling or
			flicker effect in indoor environment.
			"indoor": Avoid rolling and flicker
			effect first.

			"manual": Manual set P-Iris by
			"piris_position".
			"-": not support. (only available when
			"capability_image_c<0~(n-1)>_sens
			ortype" is "smartsensor")
			* Only available when
			"capability_image_c <n>_iristype"=pi</n>
			ris
piris_position	1~100	1/4	Manual set P-Iris.

			frame/s.
			nancys.

			* Only available when
			"capability_image_c <n>_exposure_maxrang</n>
			e" != "-" and
			"capability_image_c <n>_exposure_rangetyp</n>
			e" is "onevalue".
			* We support this parameter when the version
			number (httpversion) is equal or greater than
			0302a.
enableblc	<boolean></boolean>	4/4	Enable backlight compensation.
<not anymore="" support=""></not>			* Not support this parameter anymore when
			the version number (httpversion) is equal or
			greater than 0301a.
			* It's recommanded to use
			"exposurewin_c <n>_mode" to switch on/off</n>
			BLC.
exposurelevel	0~12	4/4	Exposure level
			"0,12": This range takes the concept from DC's
			exposure tuning options. The definition is:
			0: EV -2.0
			1: EV -1.7
			2: EV -1.3
			3: EV -1.0
			4: EV -0.7
			5: EV -0.3
			6: EV 0
			7: EV +0.3
			8: EV +0.7
			9: EV +1.0
			10: EV +1.3
			11: EV +1.7
			12: EV +2.0
exposuremode	auto,	4/4	Select exposure mode.
<product dependent=""></product>	shutterpriority,		
	irispriority,		"auto": Iris, Gain and Shutter
	manual,		Speed(Exposure time) can be set
	etc		automatically.
			"shutterpriority": Adjust with variable
	(Available options		Shutter Speed, auto Iris and Gain.
<b>.</b>	·		

		[	<b></b>
	are list in		"irispriority": Adjust with variable Iris, auto
	"capability_image_c		Gain and Shutter speed.
	<n>_exposure_mo</n>		"manual": Adjust with variable Shutter, Iris
	detype")		and Gain.
			* We support this parameter when the version
			number (httpversion) is equal or greater than
			0302a.
whitebalance	auto,	4/4	Modes of white balance.
<product dependent=""></product>	manual,		"auto": Auto white balance
	rbgain,		"rbgain": Use rgain and bgain to set white
	widerange,		balance manually.
	outdoor,		"manual": 2 cases:
	indoor,		a. if "rbgain" is not supported, this means
	sodiumauto,		keep current white balance status.
	etc		b. if "rbgain" is supported, "rgain" and
			"bgain" are updated to the current values
	(Available values are		which is got from white balance module. Then,
	listed in		act as rbgain mode
	"capability_image_c		"widerange": Auto Tracing White balance
	<pre><n>_wbmode")</n></pre>		(2000K to 10000K).
			"outdoor": auto white balance mode
			specifically for outdoor.
			"indoor": auto white balance mode
			specifically for indoor.
			"sodiumauto": sodium vapor lamps.
			sourante : sourant vapor lamps.
			* Only available when
			"capability_image_c <n>_wbmode" !="-"</n>
	0.100	A / A	
rgain	0~100	4/4	Manual set rgain value of gain control setting.
			0: Weak <-> 100: Strong
			* Only available when "rbgain" is listed in
			"capability_image_c <n>_wbmode".</n>
			* Only valid when
			"videoin_c <n>_whitebalance" != auto</n>
			* Normalized range.
bgain	0~100	4/4	Manual set bgain value of gain control setting.
			0: Weak <-> 100: Strong

-			1
			* Only available when "rbgain" is listed in
			"capability_image_c <n>_wbmode".</n>
			* Only valid when
			"videoin_c <n>_whitebalance" != auto</n>
			* Normalized range.
maxgain	0~100	4/4	Maximum gain value.
			0: Low <-> 100: High
			* Only available when
			"capability_image_c <n>_agc_maxgain" != "-"</n>
			* Only valid when "piris_mode"=manual or
			"irismode"=fixed
			* Normalized range.
			* Only available when
			"capability_image_c <n>_exposure_rangetyp</n>
			e" is "twovalues".
mingain	0~100	4/4	Minimum gain value.
			0: Low <-> 100: High
			* Only available when
			"capability_image_c <n>_agc_mingain" != "-"</n>
			* Only valid when "piris_mode"=manual or
			"irismode"=fixed
			* Normalized range.
			* Only available when
			capability_image_c <n>_exposure_rangetyp</n>
			e" is "twovalues".
gainvalue	0~100	4/4	Gain value.
		,	0: Low <-> 100: High
			* Only available when
			"capability_image_c <n>_agc_maxgain" != "-"</n>
			and
			"capability_image_c <n>_exposure_rangetyp</n>
			e" is "onevalue".
			* Normalized range.
			* We support this parameter when the version
			number (httpversion) is equal or greater than
			0302a.
			υσυζα.

piris_mode	manual, indoor,	1/4	Control P-Iris mode.
<product dependent=""></product>	outdoor,-		"outdoor": Auto-setting P-Iris to get best
			quality, but easy to meet rolling or flicker effect
			in indoor environment.
			"indoor": Avoid rolling and flicker effect first.
			"manual": Manual set P-Iris by
			"piris_position".
			"-": not support (only available when
			"capability_image_c<0~(n-1)>_sensortype"
			is "smartsensor")
			* Only available when
			capability_image_c <n>_iristype"=piris</n>
piris_position	1~100	1/4	Manual set P-Iris.
<pre><pre>conduct dependent&gt;</pre></pre>		_, .	1: Open <-> 100: Close
P			
			* Only vaild when "piris_mode"=manual or
			"capability_image_c<0~(n-1)>_sensortype"
			is "smartsensor"
			* Only available when
			"capability_image_c <n>_iristype"=piris</n>
irismode	fixed, indoor,	4/4	Control DC-Iris mode.
	outdoor	,	"outdoor": Auto-setting DC-Iris to get best
	<product< td=""><td></td><td>quality, but easy to meet rolling or flicker effect</td></product<>		quality, but easy to meet rolling or flicker effect
	dependent>		in indoor environment.
			"indoor": Avoid rolling and flicker effect first.
			" <b>fixed</b> ": Open the iris to maximum.
			* Only available when
			"capability_image_c <n>_iristype"=dciris</n>
wdrpro_mode	<boolean></boolean>	4/4	Enable WDR pro
<pre><pre>conduct dependent&gt;</pre></pre>		., .	
			* Only available when
			"capability_image_c <n>_wdrpro_mode" &gt; 0</n>
wdrpro_strength	1~100	4/4	The strength of WDR Pro.
<pre><pre>outpro_strength <pre><pre>content</pre></pre></pre></pre>	1100		The bigger value means the stronger strength
			of WDR Pro.
			* Only available when
			"capability_image_c <n>_wdrpro_strength" is</n>
wdra modo	<boolean></boolean>	1/1	I Enable WDR enhanced.
wdrc_mode		4/4	
<product dependent=""></product>			* Only available when

			"capability_image_c <n>_wdrc_mode" is 1</n>
wdrc_strength	1~100	4/4	The strength of WDR enhanced.
<product dependent=""></product>			The bigger value means the stronger strength
			of WDR enhanced.
			* Only available when
			"capability_image_c <n>_wdrc_mode" is 1</n>
aespeed_mode	<boolean></boolean>	4/4	Turning AE converge speed on or off.
<product dependent=""></product>			0: off
			1: on
			* Only available when
			"capability_image_c <n>_aespeed" is 1</n>
aespeed_speedlevel	1~100	4/4	The speed level of AE converge speed.
<product dependent=""></product>			1~20: level 1
			21~40: level 2
			41~60: level 3
			61~80: level 4
			81~100: level 5
			Level 1~4(low ~ high)
			The higher speed level meas shorter AE
			converged time during AE executing.
			* Only available when
			"capability_image_c <n>_aespeed" is 1</n>
aespeed_sensitivity	1~100	4/4	The sensitivity of AE converge speed.
<product dependent=""></product>			1~20: level 1
			21~40: level 2
			41~60: level 3
			61~80: level 4
			81~100: level 5
			Level 1~4(low ~ high)
			The higher sensitivity level meas that it is easy
			to be trigger while scene changed.
			* Only available when
			"capability_image_c <n>_aespeed" is 1</n>
flickerless	<boolean></boolean>	4/4	Turn on(1) or turn off(0) the flickerless mode
<product dependent=""></product>			* Only available when
			"capability_image_c <n>_flickerless" is 1</n>

### 7.9 Time Shift settings

Group: **timeshift** for n channel profucts and m stream

n denotes the value of "capability\_nvideoin", m denotes the value of "capability\_nmediastream"

(capability.timeshift > 0)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	4/4	Enable time shift streaming.
c<0~(n-1)>_s<0~(m-1)	<boolean></boolean>	4/4	Enable time shift streaming for specific
>_allow			stream.

## 7.10 IR cut control

Group: **ircutcontrol** (capability.nvideoinprofile> 0 and capability\_daynight\_c<0~(n-1)>\_ircutfilter=1) n denotes the value of "capability\_nvideoin"

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
mode	auto,	6/6	Set IR cut control mode
	day,		
	night,		
	di,		
	schedule		
	<product< td=""><td></td><td></td></product<>		
	dependent>		
sir	<boolean></boolean>	6/6	Enable/disable Smart IR
<product dependent=""></product>			* Only available when
			"capability_daynight_c<0~"capability_nvideoi
			n"-1>_smartir" is 1
daymodebegintime	00:00~23:59	6/6	Day mode begin time
daymodeendtime	00:00~23:59	6/6	Day mod end time
disableirled	<boolean></boolean>	6/6	Enable/disable built-in IR led
			(capability_daynight_c<0~"capability_nvideoi
			n"-1>_buildinir > 0)
enableextled	<boolean></boolean>	1/6	Enable/disable external IR led
			(capability_daynight_c<0~"capability_nvideoi
			n"-1>externalir > 0)
bwmode	<boolean></boolean>	6/6	Switch to B/W in night mode if enabled
sensitivity	low, normal, high	6/6	Sensitivity of day/night control.

(if		
capability_daynight	There are two value format:	
_c <n>_ircutsensitiv</n>	"low,normal,high": if	
ity_type=options)	capability_daynight_c <n>_ircutsensitivity_ty</n>	
	pe=options	
1~100 (if		
capability_daynight	"1~100": if	
_c <n>_ircutsensitiv</n>	capability_daynight_c <n>_ircutsensitivity_ty</n>	
ity_type=normalize	pe=normalize	
)		

## 7.11 Image setting per channel

Group: image\_c<0~(n-1)> for n channel profucts and m profile

n denotes the value of "capability\_nvideoin" and m denotes the value of "capability\_nvideoinprofile"

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
brightness	-5~5,100	4/4	-5: Darker <-> 5: Bright
<not recommended="" this="" to="" use=""></not>			100: Use " image_c <n>_brightnesspercent"</n>
			* Only available when bit 0 of
			"capability_image_c <n>_basicsetting" is 1</n>
			* We replace "brightness" with
			"brightnesspercent". * This parameter will not be used after the
			version number (httpversion) is equal or
			greater than 0400a.
contrast	-5~5,100	4/4	-5: Less contrast <-> 5: More contrast
<not recommended="" this="" to="" use=""></not>	,	., .	100: Use " image_c <n>_contrastpercent"</n>
			* Only available when bit 1 of
			"capability_image_c <n>_basicsetting" is 1.</n>
			* We replace "contrast" with "contrastpercent
			".
			* This parameter will not be used after the
			version number (httpversion) is equal or
			greater than 0400a.
saturation	-5~5,100	4/4	-5: Less saturation <-> 5: More saturation

<not recommended="" this="" to="" use=""></not>			100: Use " image_c <n>_saturationpercent"</n>
			* Only available when bit 2 of "capability_image_c <n>_basicsetting" is 1.</n>
			<ul> <li>* We replace "saturation" with</li> <li>"saturationpercent".</li> <li>* This parameter will not be used after the</li> <li>version number (httpversion) is equal or</li> </ul>
			greater than 0400a.
sharpness	-3~3,100	4/4	-3: Softer <-> 3: Sharper
<not recommended="" this="" to="" use=""></not>			100: Use " image_c <n>_sharpnesspercent"</n>
			* Only available when bit 3 of
			"capability_image_c <n>_basicsetting" is 1.</n>
			* We replace "sharpness" with
			"sharpnesspercent".
			* This parameter will not be used after the
			version number (httpversion) is equal or
			greater than 0400a.
brightnesspercent	0~100	4/4	Set brightness in the normalized range.
			0: Darker <-> 100: Bright
			* Only available when bit 0 of
			"capability_image_c <n>_basicsetting" is 1.</n>
contrastpercent	0~100	4/4	Set contrast in the normalized range.
		., .	0: Less contrast <-> 100: More contrast
			* Only available when bit 1 of
			"capability_image_c <n>_basicsetting" is 1</n>
saturationpercent	0~100	4/4	Set saturation in the normalized range.
			0: Less saturation <-> 100: More saturation
			* Only available when bit 2 of
	0 100	4/4	"capability_image_c <n>_basicsetting" is 1.</n>
sharpnesspercent	0~100	4/4	Set sharpness in the normalized range.
			0: Softer <-> 100: Sharper
			* Only available when bit 3 of

			"capability_image_c <n>_basicsetting" is 1</n>
gammacurve	0~100	4/4	0: Fine-turned gamma curve by Vivotek.
		., .	1: Gamma value = $0.01$
			2: Gamma value = 0.02
			3: Gamma value = $0.03$
			 100: Gamma value = 1
			* Note: Although we set gamma value to 100
			level, but not all gamma values are valid.
			Internal module will take the closest valid one.
			For example, 1~45 may all be mapped to
			gamma value = 0.45, etc.
lowlightmode	<boolean></boolean>	4/4	Enable/disable low light mode.
<product dependent=""></product>			* Only available when
			"capability_image_c <n>_lowlightmode" is 1</n>
dnr_mode	<boolean></boolean>	4/4	3D noise reduction.
<product dependent=""></product>			0:disable
			1:enable
			* Only available when
			"capability_image_c <n>_dnr" is 1</n>
dnr_strength	1~100	4/4	Strength of 3DNR
<product dependent=""></product>			* Only available when
			"capability_image_c <n>_dnr" is 1</n>
defog_mode	<boolean></boolean>	4/4	Enable/disable defog mode.
<product dependent=""></product>			0:disable
			1:enable
			* Only available when
			"capability_image_c <n>_defog_mode" is 1</n>
defog_strength	1~100	4/4	Strength of defog
<product dependent=""></product>			* Only available when
			"capability_image_c <n>_defog_mode" is 1</n>
eis_mode	<boolean></boolean>	4/4	Electronic image stabilizer
<product dependent=""></product>			0:disable
			1:enable
			* Only available when 'eis' is listed in
			"capability_image_c <n>_is_mode".</n>
eis_strength	1~100	4/4	Strength of electronic image stabilizer
<product dependent=""></product>			* Only available when 'eis' is listed in
			"capability_image_c <n>_is_mode".</n>

dis_mode	<boolean></boolean>	4/4	Digital image stabilizer
<product dependent=""></product>		,	0:disable
			1:enable
			* Only available when 'dis' is listed in
			"capability_image_c <n>_is_mode".</n>
dis_strength	1~100	4/4	Strength of digital image stabilizer
<product dependent=""></product>			* Only available when 'dis' is listed in
			"capability_image_c <n>_is_mode".</n>
scene_enable	<boolean></boolean>	4/4	Enable/disable scene mode
<product dependent=""></product>			0: disable
			1: enable
			* Only available when
			"capability_image_c <n>_scenemode_support</n>
			" is 1
scene_mode	visibility,	4/4	Value of scene mode
<product dependent=""></product>	noiseless,		* Only available when
	lpcparkinglot,		"capability_image_c <n>_scenemode_support</n>
	lpcstreet		" is 1
	<product< td=""><td></td><td>* Available value is listed in</td></product<>		* Available value is listed in
	dependent>		"capability_image_c <n>_scenemode_support</n>
			type"
restoreatwb	1~	4/4	Restore of adjusting white balance of image
			according to mode settings
freeze	<boolean></boolean>	4/4	Enable/disable Image freeze while patrolling.
<product dependent=""></product>			0: disable
			1: enable
			* Only available when
			"capability_image_c <n>_freeze" is 1</n>
profile_i<0~(m-1)>_enable	<boolean></boolean>	4/4	Enable/disable this profile setting
profile_i<0~(m-1)>_policy	night, schedule	4/4	The mode which the profile is applied to.
			* Not support "policy=day" anymore when the
			version number (httpversion) is equal or
			greater than 0301a.
profile_i<0~(m-1)>_begintime	hh:mm	4/4	Begin time of schedule mode.
profile_i<0~(m-1)>_endtime	hh:mm	4/4	End time of schedule mode.
profile_i<0~(m-1)>_brightness	-5~5,100	4/4	-5: Darker <-> 5: Bright
<not recommended="" this="" to="" use=""></not>			100: Use " image_c <n>_brightnesspercent"</n>
			* Only available when bit 0 of

1			
			"capability_image_c <n>_basicsetting" is 1</n>
			* We replace "profile_i0_brightness" with
			"profile_i0_brightnesspercent".
			* This parameter will not be used after the
			version number (httpversion) is equal or
			greater than 0400a.
profile_i<0~(m-1)>_contrast	-5~5,100	4/4	-5: Less contrast <-> 5: More contrast

			exposure.		
	* Available values are listed in		"auto": Use full view as the only one exposure		
	"capability_image_c <n>_exposu</n>		window.		
	re_winmode"		"custom": Use inclusive and exclusive		
			window.		
			"blc": Use BLC(Back Light Compensation),		
			and the only exposure window is located at the		
			center of view.		

(Only valid when capability\_image\_c<n>\_exposure\_mode =1)

Group: **exposurewin\_c<0~(n-1)>\_profile\_i<0~(m-1)>\_win\_i<0~(k-1)>** for m profile and n channel product,

n denotes the value of "capability\_nvideoin", m denotes the value of "capability\_nvideoinprofile",

k denotes the value of "capability\_image\_c<n>\_exposure\_winnum".

#### (Only valid when exposurewin\_c<n>\_mode=custom)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	4/4	Enable or disable the window.
policy	0~1	4/4	0: Indicate exclusive.
			1: Indicate inclusive.
			* Only available when exclusive is listed in
			"capability_image_c <n>_exposure_wintype".</n>
home	<0~320,0~240>	4/4	Left-top corner coordinate of the window.
			* Only available when qvga is listed in
			"capability_image_c <n>_exposure_windomai</n>
			n".
size	<0~320x0~240>	4/4	Width and height of the window.
			* Only available when qvga is listed in
			"capability_image_c <n>_exposure_windomai</n>
			n".
homepx	<0~W,0~H>	4/4	Left-top corner coordinate of the window.
	W: 0~ The current image width -1		* Only available when px is listed in
	H: 0~ The current image height -1		"capability_image_c <n>_exposure_windomai</n>
			n".
sizepx	<0~Wx0~ H>	4/4	Width and height of the window.
	W: 0~ The current image width -1		* Only available when px is listed in
	H: 0~ The current image height -1		"capability_image_c <n>_exposure_windomai</n>
			n".
homestd	<0~9999,0~9999>	4/4	Left-top corner coordinate of the window.
			* Only available when std is listed in
			"capability_image_c <n>_exposure_windomai</n>
			n".
sizestd	<0~9999x0~9999>	4/4	Width and height of the window.
			* Only available when std is listed in
			"capability_image_c <n>_exposure_windomai</n>
			n".

# 7.13 Audio input per channel

Group: audioin\_c<0~(n-1)> for n channel products (capability.naudioin>0)

n denotes the value of "capability\_nvideoin"

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
source	micin, linein	4/4	micin => use built-in microphone input.
<not recommended="" td="" to="" use<=""><td><product< td=""><td></td><td>linein =&gt; use external microphone input.</td></product<></td></not>	<product< td=""><td></td><td>linein =&gt; use external microphone input.</td></product<>		linein => use external microphone input.
this>	dependent>		
			* Reserved for compatibility, and suggest don't
			use this since the version number
			(httpversion) is equal or greater than 0301a.
			* We replace "source" with "input". More
			details, please refer the parameter description
			of "input".
input	intmic, extmic	4/4	intmic: Internal (built-in) microphone.
	<product< td=""><td></td><td>(Only available when capability_audio_intmic</td></product<>		(Only available when capability_audio_intmic
	dependent>		= 1)
			extmic: External microphone input.
			(Only available when capability_audio_extmic
			=1)
			* Note: If physical microphone switch is
			showed on product, this value is updated
			during booting to fit switch status.
volume_internal	0~100	4/4	Volume when take internal microphone as
			input source.
			0: Minimum
			100: Maximum
			* Only available when the channel supports
			internal microphone (The related bit of
			"capability_audio_intmic" is equal to 1).
volume_external	0~100	4/4	Volume when take external microphone as
			input source.
			0: Minimum
			100: Maximum
			* Only available when the channel supports
			external microphone (The related bit of

			"capability_audio_extmic" is equal to 1).
mute	0, 1	1/4	0: Mute off
			1: Mute on
gain	0~100	4/4	Gain of input.
<not recommended="" td="" to="" use<=""><td></td><td></td><td>(audioin_c&lt;0~(n-1)&gt;_source = linein)</td></not>			(audioin_c<0~(n-1)>_source = linein)
this>			
			* Reserved for compatibility, and suggest don't
			use this since the version number
			(httpversion) is equal or greater than 0301a.
			* We replace "gain" with "volume_internal"
			and "volume_external". More details, please
			refer the parameter description of
			"volume_internal" and "volume_external".
boostmic	0~100	4/4	Enable microphone boost.
<not recommended="" td="" to="" use<=""><td></td><td></td><td>Gain of input.</td></not>			Gain of input.
this>			(audioin_c<0~(n-1)>_source = micin)
			* Reserved for compatibility, and suggest don't
			use this since the version number
			(httpversion) is equal or greater than 0301a.
			* We replace "boostmic" with
			"volume_internal" and "volume_external".
			More details, please refer the parameter
			description of "volume_internal" and
			"volume_external".
s0_codectype	aac4, gamr, g711,	4/4	Set audio codec type for input.
	g726		aac4: Advanced Audio Coding (AAC)
	(Available codec are		gamr: Adaptive Multi-Rate (AMR)
	listed in		g711: G.711
	"capability_audioin_		g726: G.726
	codec")		
s0_aac4_bitrate	16000,	4/4	Set AAC4 bitrate in bps.
	32000,		
	48000,		* Only available if AAC is supported.
	64000,		
	96000,		
	128000		
s0_gamr_bitrate	4750,	4/4	AMR encoded bitrate in bps.
	5150,		

T	1	1	
	5900,		* Only available if AMR is supported.
	6700,		
	7400,		
	7950,		
	10200,		
	12200		
s0_g711_mode	pcmu,	4/4	Set G.711 companding algorithm.
	pcma		pcmu: µ-law algorithm
			pcma: A-law algorithm
			* Only available if G.711 is supported.
s0_g726_bitrate	16000,	4/4	Set G.726 encoded bitrate in bps.
	24000,		
	32000,		* Only available if G.726 is supported.
	40000		
s0_g726_bitstreampackin	little, big	4/4	Set G.726 bit streaming packing mode.
gmode			little: Little-endian bitstream format.
			big: Big-endian bitstream format.
			* Only available if G.726 is supported.
s0_g726_vlcmode	0, 1	4/4	Enable vlcmode for G.726.
			0: Standard mode.
			1: Solve compatibility problem with VLC
			player.
			* Only available if G.726 is supported.
			,
alarm_enable	<boolean></boolean>	4/4	Enable audio detection
 alarm_level	1~100	4/4	Audio detection alarm level
 profile_i0_enable	<boolean></boolean>	4/4	Enable/disable this profile setting
profile_i0_policy	night,	4/4	The mode which the profile is applied to.
· · · · · · · · · · · · · · · · · · ·	schedule		···· ··· ··· ··· ··· ··· ··· ··· ··· ·
			* Not support "policy=day" anymore when the
			version number (httpversion) is equal or
			greater than 0301a.
 profile_i0_begintime	hh:mm	4/4	Begin time of schedule mode.
profile_i0_begintime	hh:mm	4/4	End time of schedule mode.
	1~100	-	Audio detection alarm level
profile_i0_alarm_level	1~100	4/4	

## 7.14 Motion detection settings

Group: motion\_c<0~(n-1)> for n channel products

n denotes the value of "capability\_nvideoin"

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	4/4	Enable motion detection.
win_sensitivity	1 ~ 100	4/4	Sensitivity of all motion detection windows.

#### Group: motion\_c<0~(n-1)>\_win\_i<0~(k-1)>

n denotes the value of "capability\_nvideoin", k denotes the value of "capability\_nmotion".

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	4/4	Enable motion detection window.
name	string[14]	4/4	Name of motion window.
polygonstd	0 ~ 9999,0 ~ 9999,	4/4	Coordinate of polygon window position.
	0 ~ 9999,0 ~ 9999,		(4 points: x0,y0,x1,y1,x2,y2,x3,y3)
	0 ~ 9999,0 ~ 9999,		* Only available when
	0 ~ 9999,0 ~ 9999		"capability_motion_wintype" = polygon.
			* Only available when std is listed in "capability_motion_windomain"
objsize	1 ~ 100	4/4	Percent of motion detection window.
sensitivity	1 ~ 100	4/4	Sensitivity of motion detection window.
<not recommended="" td="" to="" use<=""><td></td><td></td><td></td></not>			
this>			* We replace "sensitivity" with
			"win_sensitivity".
			* This parameter will not be used after the
			version number (httpversion) is equal or
			greater than 0400a.
polygonpx	0 ~ W,0 ~ H, 0 ~	4/4	Coordinate of polygon window position.
<not recommended="" td="" to="" use<=""><td>W,0 <math display="inline">\sim</math> H, 0 <math display="inline">\sim</math> W,0 <math display="inline">\sim</math></td><td></td><td>(4 points: x0,y0,x1,y1,x2,y2,x3,y3)</td></not>	W,0 $\sim$ H, 0 $\sim$ W,0 $\sim$		(4 points: x0,y0,x1,y1,x2,y2,x3,y3)
this>	H, 0 ~ W,0 ~ H		* Only available when
	W: 0~ The current		"capability_motion_wintype" = polygon.
	image width -1		
	H: 0~ The current		* Only available when px is listed in
	image height -1		"capability_motion_windomain

			* It's recommended to use polygonsd
			* This parameter will not be used after the
			version number (httpversion) is equal or
			greater than 0400a.
polygon	0 ~ 320,0 ~ 240, 0	4/4	Coordinate of polygon window position.
<not recommended="" td="" to="" use<=""><td>~ 320,0 ~ 240, 0 ~</td><td></td><td>(4 points: x0,y0,x1,y1,x2,y2,x3,y3)</td></not>	~ 320,0 ~ 240, 0 ~		(4 points: x0,y0,x1,y1,x2,y2,x3,y3)
this>	320,0 ~ 240, 0 ~		* Only available when
	320,0 ~ 240		"capability_motion_wintype" = polygon.
			* Only available when qvga is listed in
			"capability_motion_windomain
			* It's recommended to use polygonsd
			* This parameter will not be used after the
			version number (httpversion) is equal or
			greater than 0400a.
left	0 ~ 320	4/4	Left coordinate of window position.
<not recommended="" td="" to="" use<=""><td></td><td></td><td>* Only available when</td></not>			* Only available when
this>			"capability_motion_wintype" = rectangle.
			* Only available when qvga is listed in
			"capability_motion_windomain".
			* It's recommended to use polygonsd
			* This parameter will not be used after the
			version number (httpversion) is equal or
			greater than 0400a.
top	0 ~ 240	4/4	Top coordinate of window position.
<not recommended="" td="" to="" use<=""><td></td><td></td><td>* Only available when</td></not>			* Only available when
this>			"capability_motion_wintype" = rectangle.
			capability_inclosi_initype rectangle.
			* Only available when qvga is listed in
			"capability_motion_windomain".
			* It's recommended to use polygonsd
			* This parameter will not be used after the
			version number (httpversion) is equal or
			greater than 0400a.
width	0 ~ 320	4/4	Width of motion detection window.
<not recommended="" td="" to="" use<=""><td></td><td></td><td>* Only available when</td></not>			* Only available when

this>			"capability_motion_wintype" = rectangle.
			* Only available when qvga is listed in "capability_motion_windomain".
			* It's recommended to use polygonsd * This parameter will not be used after the version number (httpversion) is equal or
height	0 ~ 240	4/4	greater than 0400a. Height of motion detection window.
<not recommended="" td="" to="" use<=""><td></td><td></td><td>* Only available when</td></not>			* Only available when
this>			"capability_motion_wintype" = rectangle.
			* Only available when qvga is listed in "capability_motion_windomain".
			<ul> <li>* It's recommended to use polygonsd</li> <li>* This parameter will not be used after the version number (httpversion) is equal or greater than 0400a.</li> </ul>

Group: motion\_c<0~(n-1)>\_profile\_i<0~(m-1)> for m profile and n channel product,

n denotes the value of "capability\_nvideoin", m denotes the vaule of " capability\_nmotionprofile ",

(capability\_nmotionprofile > 0)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	4/4	Enable profile $1 \sim (m-1)$ .
policy	night,	4/4	The mode which the profile is applied to.
	schedule		
			* Not support "policy=day" anymore when the
			version number (httpversion) is equal or
			greater than 0301a.
begintime	hh:mm	4/4	Begin time of schedule mode.
endtime	hh:mm	4/4	End time of schedule mode.
win_sensitivity	1 ~ 100	4/4	Sensitivity of all motion detection windows.

Group: **motion\_c<0~(n-1)>\_profile\_i<0~(m-1)>\_win\_i<0~(k-1)>** for m profile and n channel product, n denotes the value of "capability\_nvideoin", m denotes the value of "capability\_nmotionprofile", k denotes the value of "capability\_nmotion".

## 7.15 Tampering detection settings

Group: tampering\_c<0~(n-1)> for n channel products (capability.tampering > 0)

n denotes the value of "capability\_nvideoin"

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	4/4	Enable or disable tamper detection.
threshold	0~100	4/4	Threshold of tamper detection.
duration	10~600	4/4	If tampering value exceeds the "threshold" for
			more than "duration" second(s), then tamper
			detection is triggered.
ignorewidth	0, <positive integer=""></positive>	1/7	Indicate the width to offset to start to analysis
			the image.
dark_enable	<boolean></boolean>	4/4	Enable or disable image too dark detection
dark_threshold	0~100	4/4	Threshold of image too dark detection
dark_duration	1~10	4/4	If image too dark value exceeds the
			"threshold" for more than "duration"
			second(s), then image too dark detection is
			triggered.
bright_enable	<boolean></boolean>	4/4	Enable or disable image too bright detection
bright_threshold	0~100	4/4	Threshold of image too bright detection
bright_duration	1~10	4/4	If image too bright value exceeds the
			"threshold" for more than "duration"
			second(s), then image too bright detection is
			triggered.
blurry_enable	<boolean></boolean>	4/4	Enable or disable image too blurry detection
blurry_threshold	0~100	4/4	Threshold of image too blurry detection
blurry_duration	1~10	4/4	If image too blurry value exceeds the
			"threshold" for more than "duration"
			second(s), then image too blurry detection is

			1
		triagonad	1
		triggereg.	1
		55	1

### 7.16 **DDNS**

### Group: **ddns** (capability.protocol.ddns > 0)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	6/6	Enable or disable the dynamic DNS.
provider	CustomSafe100,	6/6	Safe100 => safe100.net
	DyndnsDynamic,		DyndnsDynamic => dyndns.org (dynamic)
	DyndnsCustom,		DyndnsCustom => dyndns.org
	Safe100		CustomSafe100 =>
			Custom server using safe100 method
<provider>_hostname</provider>	string[128]	6/6	Your DDNS hostname.
<provider>_usernameem</provider>	string[64]	6/6	Your user name or email to login to the DDNS
ail			service provider
<provider>_passwordkey</provider>	string[64]	6/6	Your password or key to login to the DDNS
			service provider.
<provider>_servername</provider>	string[128]	6/6	The server name for safe100.
			(This field only exists if the provider is
			customsafe100)

## 7.17 Express link

#### Group: expresslink

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	6/6	Enable or disable express link.
state	onlycheck,	6/6	Camera will check the status of network
	onlyoffline,		environment and express link URL
	checkonline,		
	badnetwork		
url	string[64]	6/6	The url user define to link to camera

## 7.18 UPnP presentation

Group: upnppresentation

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	6/6	Enable or disable the UPnP presentation
			service.

## 7.19 UPnP port forwarding

Group: upnpportforwarding

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	6/6	Enable or disable the UPnP port forwarding
			service.
upnpnatstatus	0~3	6/7	The status of UPnP port forwarding, used
			internally.
			0 = OK, 1 = FAIL, 2 = no IGD router, 3 = no
			need for port forwarding

## 7.20 System log

#### Group: **syslog**

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enableremotelog	<boolean></boolean>	6/6	Enable remote log.
serverip	<ip address=""></ip>	6/6	Log server IP address.
serverport	514, 1025~65535	6/6	Server port used for log.
level	0~7	6/6	Levels used to distinguish the importance of
			the information:
			0: LOG_EMERG
			1: LOG_ALERT
			2: LOG_CRIT
			3: LOG_ERR
			4: LOG_WARNING
			5: LOG_NOTICE
			6: LOG_INFO
			7: LOG_DEBUG
setparamlevel	0~2	6/6	Show log of parameter setting.

0: disable
1: Show log of parameter setting set from
external.
2. Show log of parameter setting set from
external and internal.

## 7.21 SNMP

#### Group: **snmp** (capability.protocol.snmp > 0)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)

	"capability_ptz_maxpan"		
win_i<0~(m-1)>_tilt	"capability_ptz_mintilt" ~	4/4	Tilt position of window position.
	"capability_ptz_maxtilt"		
win_i<0~(m-1)>_zoom	"capability_ptz_minzoom" ~	4/4	Zoom position of window position.
	"capability_ptz_maxzoom"		
win_i<0~(m-1)>_fliped	<boolean></boolean>	4/4	Flip side of window position.
			0: Non-flip side
			1: Flip side

# 7.25 Capability

### Group: capability

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
api_httpversion	<string></string>	0/7	The version of VIVOTEK WebAPI with 4
	This number start		integers plus 1 alphabet, There are composed
	with 0301a.		by "major version", "minor version",
			"revision","_platform". ex: 0301a_1
			Major version
			Increase the major version when change,
			remove the old features/interfaces or the
			firmware has substantially change in
			architecture and not able to roll back to
			previous version. This may cause
			incompatibility with supporting software.
			Minor version
			Increase the minor version when add new
			features/interfaces without change the old
			features and interfaces.
			<u>Revision</u>
			Increase the revision when fix bugs without
			change any features of the output.
			_platform
			This is a constant, it is used to distinguish
			between different platforms
			API version format:
			MMmmr_k
			Where "MM" is the major version, "mm" is the
			minor version and "r" is the revision.
			'M' and 'm' and 'k' are decimal digit from 0 to 9,
			while 'r' is an alphabetic.
			EX: 0302b_1 => Major version = 03, minor
			version = 02, revision = b, platform = $1$
			The 4 integer numbers are WebAPI version, we
			use short name: [httpversion] for it in this

			document.
			The 5th character is model-based version for
			API bug-fix and it's default to "a".
			Ex: If some APIs in a model does not follow the
			API definition of 0301a_1, we will fix them and
			change this API value to 0301b_1.
bootuptime	<positive integer=""></positive>	0/7	Server bootup time.
nir	0,	0/7	Number of IR interfaces.
<not anymore="" support=""></not>	<positive integer=""></positive>		(Recommand to use
			capability_daynight_c<0~"capability_nvideoi
			n"-1>_builtinir for built-in IR and
			capability_daynight_c<0~"capability_nvideoi
			n"-1>_externalir for external IR)
			* Not support this parameter anymore when
			the version number (httpversion) is equal or
			greater than 0301a.
npir	0,	0/7	Number of PIRs.
	<positive integer=""></positive>		
ndi	0,	0/7	Number of digital inputs.
	<positive integer=""></positive>		
nvi	0,	0/7	Number of virtual inputs (manual trigger)
	<positive integer=""></positive>		
ndo	0,	0/7	Number of digital outputs.
	<positive integer=""></positive>		
naudioin	0,	0/7	The number of audio input channel. 0 means
	<positive integer=""></positive>		no audio input support.
naudioout	0,	0/7	The number of audio output channel
	<positive integer=""></positive>		
nvideoin	<positive integer=""></positive>	0/7	Number of video inputs.
nvideoout	0, <positive< td=""><td>0/7</td><td>Number of video out interface.</td></positive<>	0/7	Number of video out interface.
inideoode	Integer>		
nvideoinprofile	<positive integer=""></positive>	0/7	Number of video input profiles.
Indeomprome			
nmediastream	<positive integer=""></positive>	0/7	Number of media stream per channels.
naudiosetting	<positive integer=""></positive>	0/7	Number of audio settings per channel.
<not anymore="" support=""></not>			* Not support this parameter anymore when
			the version number (httpversion) is equal or
			greater than 0301a.
			* We replace "naudiosetting" with "naudioin".

			More details, please refer the parameter description of "volume_internal" and "volume_external".
nuart	0, <positive integer=""></positive>	0/7	Number of UART interfaces.
nmotion	<positive integer=""></positive>	0/7	The number of motion window.
nmotionprofile	0, <positive integer&gt;</positive 	0/7	Number of motion profiles.
ptzenabled	0, <positive integer&gt;</positive 	0/7	An 32-bit integer, each bit can be set separately as follows: Bit 0 => Support camera control function; 0(not support), 1(support) Bit 1 => Built-in or external video source; 0(external), 1(built-in) Bit 2 => Support pan operation; 0(not support), 1(support) Bit 3 => Support tilt operation; 0(not support), 1(support) Bit 4 => Support zoom operation; 0(not support), 1(support) (only available when RS-485 interface is supported or SD/PZ/PT/PD/video server series) Bit 5 => Support focus operation; 0(not support), 1(support) (only available when RS-485 interface is supported or SD/PZ/PT/PD/video server series) Bit 5 => Support focus operation; 0(not support), 1(support) (only available when RS-485 interface is supported or SD/PZ/PT/PD/video server series) Bit 6 => Reserved bit; always 0. Bit 7 => External or built-in PT; 0(built-in), 1(external)
windowless	<boolean></boolean>	0/7	Indicate whether to support windowless plug-in.
evctrlchannel	<boolean></boolean>	0/7	Indicate whether to support HTTP tunnel for event/control transfer.
joystick	<boolean></boolean>	0/7	Indicate whether to support joystick control.
remotefocus <not recommended="" to="" use<br="">this&gt;</not>	<boolean></boolean>	0/7	An 4-bit integer, which indicates the supportive application of remotefocus. If the value of this parameter is larger than 0,

			it means that the camera supports
			remotefocus function.
			<pre>bit 0 =&gt; Indicate whether to support both zoom and focus function. bit 1 =&gt; Only support zoom function. bit 2 =&gt; Only support focus function. bit 3 =&gt; Currently, this is a reserved bit, and the default value is 0. * It's strongly non-recommended to use this. * This is kept for compatibility. * You can check " capability_image_c&lt;0~nvideoin-1&gt;_remotef ocus" for support remotefocus function; capability_image_c&lt;0~nvideoin-1&gt;_backfocu</pre>
			s" for support backfocus function.
npreset	0, <positive< td=""><td>0/7</td><td>Number of preset locations</td></positive<>	0/7	Number of preset locations
	integer>	0/7	Four Manual de circultur de Circitrica de Circitrica de Circitrica de Circitrica de Circitrica de Circitrica de
eptz	0, <positive< td=""><td>0/7</td><td>For "nvideoin" = 1, the definition is as</td></positive<>	0/7	For "nvideoin" = 1, the definition is as
	integer>		following:
			A 32-bits integer, each bit can be set
			separately as follows:
			Bit $0 => 1$ st stream supports ePTZ or not.
			Bit $1 => 2nd$ stream supports ePTZ or not, and
			so on.
			For nvideoin >= 2, the definition is different:
			First all 32 bits are divided into groups for
			channel.
			Ex:
			nvideoin = 2, bit $0 \sim 15$ are the 1st group for 1st
			channel, bit $16 \sim 31$ are the 2nd group for 2nd
			channel.
			nvideoin = 3, bit $0 \sim 9$ are the 1st group for 1st
			channel, bit $10 \sim 19$ are the 2nd group for 2nd
			channel, bit 20~31 are the 3rd group for 3rd
			channel.
			Then, the 1st bit of the group indicates 1st
			stream of a channel support ePTZ or not. The
			sacan of a channel support er 12 of not. The

			2nd bit of the group indicates 2nd stream of a
			channel support ePTZ or not, and so on.
			* For most products, the last stream of a
			channel will not support ePTZ. It is reserved
			for full view of the channel. For some
			dual-stream products, both streams support
			ePTZ.
nanystream	0, <positive< td=""><td>0/7</td><td>number of any media stream per channel</td></positive<>	0/7	number of any media stream per channel
•	integer>	0.77	To direct on the theory to some out Table II and Middle
iva	<boolean></boolean>	0/7	Indicate whether to support Intelligent Video analysis
whitelight	<boolean></boolean>	0/7	Indicate whether to support white light led.
iris	<boolean></boolean>	0/7	Indicate whether to support iris control.
supportsd	<boolean></boolean>	0/7	Indicate whether to support local storage.
fisheye	<boolean></boolean>	0/7	The parameter is used to determine whether
			the product is fisheye or not.
tampering	<boolean></boolean>	0/7	Indicate whether to support tampering
			detection.
tamperingmode	tamper,toodark,toob	0/7	Available tampering mode list.
	right,tooblurry		* Only available when "capability_tampering"
			is 1.
adaptiverecording	<boolean></boolean>	0/7	Indicate whether to support adaptive
			recording.
adaptivestreaming	<boolean></boolean>	0/7	Indicate whether to support adaptive
			streaming.
supporttriggertypes	seq,boot,motion,net	0/7	list all the trigger types which are supported in
	workfail,recnotify,ta		the camera:
	mpering,vi,vadp,di,		"seq" = Periodic condition
	volalarm,temperatu		"boot" = System boot
	re,pir, visignal,		"motion" = Video motion detection
	backup		"networkfail" = network connection failure
	<product< td=""><td></td><td>"recnotify" = Recording notification.</td></product<>		"recnotify" = Recording notification.
	dependent>		"tampering" = Tamper detection.
			"vi" = Virtual input (Manual trigger)
			"vadp" = VADP trigger
			"di"= Digital input
			"volalarm" = Audio detection
			"temperature" = Temperature detection

			"pir" = PIR detection
			"visignal" = Video input signal loss.
			"backup" = Backing up recorded files
			* Only available when [httpversion] >= 0301a
storage_dbenabled	<boolean></boolean>	0/7	Media files are indexed in database.
protocol_https	< boolean >	0/7	Indicate whether to support HTTP over SSL.
protocol_rtsp	< boolean >	0/7	Indicate whether to support RTSP.
protocol_sip	<boolean></boolean>	0/7	Indicate whether to support SIP.
protocol_maxconnection	<positive integer=""></positive>	0/7	The maximum number of allowed
			simultaneous connections.
protocol_maxgenconnecti on	<positive integer=""></positive>	0/7	The maximum general streaming connections .
protocol_rtp_multicast_sc alable	<boolean></boolean>	0/7	Indicate whether to support scalable multicast.
protocol_rtp_multicast_ba	<boolean></boolean>	0/7	Indicate whether to support backchannel
ckchannel			multicast.
protocol_rtp_tcp	<boolean></boolean>	0/7	Indicate whether to support RTP over TCP.
protocol_rtp_http	<boolean></boolean>	0/7	Indicate whether to support RTP over HTTP.
protocol_spush_mjpeg	<boolean></boolean>	0/7	Indicate whether to support server push MJPEG.
protocol_snmp	<boolean></boolean>	0/7	Indicate whether to support SNMP.
protocol_ipv6	<boolean></boolean>	0/7	Indicate whether to support IPv6.
protocol_pppoe	<boolean></boolean>	0/7	Indicate whether to support PPPoE.
protocol_ieee8021x	<boolean></boolean>	0/7	Indicate whether to support IEEE802.1x.
protocol_qos_cos	<boolean></boolean>	0/7	Indicate whether to support CoS.
protocol_qos_dscp	<boolean></boolean>	0/7	Indicate whether to support QoS/DSCP.
protocol_ddns	<boolean></boolean>	0/7	Indicate whether to support DDNS.
videoin_type	0, 1, 2	0/7	0 => Interlaced CCD
			1 => Progressive CCD
			2 => CMOS
videoin_nresolution	<positive integer=""></positive>	0/7	This equals
			"capability_videoin_c0_nresolution".
			* This is kept for compatibility.
videoin_resolution	A list of <wxh></wxh>	0/7	This equals

	anna du st		
	<pre><product< pre=""></product<></pre>		"capability_videoin_c0_resolution".
	dependent>		
			* This is kept for compatibility.
videoin_maxframerate	A list of <integer></integer>	0/7	This equals
			"capability_videoin_c0_maxframerate".
			* This is kept for compatibility.
videoin_mjpeg_maxframe	A list of <integer></integer>	0/7	This equals
rate	and "-"		"capability_videoin_c0_mjpeg_maxframerate
			п.
			* This is kept for compatibility.
videoin_h264_maxframer	A list of <integer></integer>	0/7	This equals
ate	and "-"	-,	"capability_videoin_c0_h264_maxframerate".
			* This is kept for compatibility.
videoin_codec	mjpeg, h264, h265	0/7	Available codec of a device, split by comma.
	<product< td=""><td></td><td>The sequence is not limited.</td></product<>		The sequence is not limited.
	dependent>		
			EX:
			FD8183 supports H.264 and MJPEG, then this
			is "mjpeg,h264".
			IP9171 supports H.264, MJPEG and H.265,
· · · · · ·		0.7	then this is "mjpeg,h264,h265"
videoin_streamcodec	A list of <positive< td=""><td>0/7</td><td>This equals</td></positive<>	0/7	This equals
	Integer>		"capability_videoin_c0_streamcodec".
			* This is kept for compatibility.
videoin_flexiblebitrate	<boolean></boolean>	0/7	Indicate whether to support
			flexible bit rate control.
videoout_codec	-, ntsc, pal	0/7	Current output information about video out.
			1st element for 1st video-out, 2nd element for
			2nd video-out, and so on. The number of
			element depends on "capability_nvideooout".
			"-": Video-out is not available
			ntsc: NTSC analog output
			pal: PAL analog output
			Ex:
			"nvideoout"=0, "videoout_codec"=-
L			

<pre>"nvideoout"=1 with NTSC, "videoout_codec"=ntsc "nvideoout"=1 with PAL, "videoout_codec"=pal "nvideoout"=2 with both NTSC, "videoout_codec"=ntsc,ntsc * For camera, this feature is controlled by physical jump on device. No WebAPI to control it. This value is set only on camera power-on and maintains the status.</pre>

* For camera, this feature is controlled by physical jump on device. No WebAPI to control it. This value is set only on camera power-on
physical jump on device. No WebAPI to control it. This value is set only on camera power-on
physical jump on device. No WebAPI to control it. This value is set only on camera power-on
it. This value is set only on camera power-on
and maintains the status.
* Only available when [httpversion] >= 0301a
timeshift <boolean> 0/7 Indicate whether to support time shift caching</boolean>
stream.
audio_aec <boolean> 0/7 Indicate whether to support acoustic echo</boolean>
audio_mic <boolean> 0/7 Indicate whether to support built-in</boolean>
<pre><not anymore="" support=""></not></pre>
* Not support this parameter anymore when
the version number (httpversion) is equal or
greater than 0301a.
* We replace "audio_mic" with "audio_intmic".
audio_intmic     <0~Positive
Integer> 0: Not support
1: Support
Bit 0 for CH0, bit 1 for CH1, and so on.
audio_extmic<0~Positive0/7External Microphone.
Integer> 0: Not support
1: Support
Bit 0 for CH0, bit 1 for CH1, and so on.
audio_alarm<0~Positive0/70: Not support audio alarm.
Integer> 1: Support audio alarm.
Bit 0 for CH0, bit 1 for CH1, and so on.
audio_linein <boolean> 0/7 Indicate whether to support external line</boolean>
<not anymore="" support=""> input.</not>
* Not support this parameter anymore when
the version number (httpversion) is equal or
greater than 0301a.
* It will be replaced by audio_intmic and

			audio_extmic.
audio_lineout	<boolean></boolean>	0/7	Indicate whether to support line output.
audio_michardwareswitch	<boolean></boolean>	0/7	Indicate whether the hardware supports
			built-in/external mic switch
audio_headphoneout <not anymore="" support=""></not>	<boolean></boolean>	0/7	Indicate whether to support headphone output.
			* Not support this parameter anymore when
			the version number (httpversion) is equal or
			greater than 0301a.
audioin_codec	aac4, gamr, g711,	0/7	Available audio codec. We take comma to split
	g726, -		codec without any space.
	<product< td=""><td></td><td></td></product<>		
	dependent>		aac4: Advanced Audio Coding (AAC)
			gamr: Adaptive Multi-Rate (AMR)
			g711: G.711
			g726: G.726
			-: Not supported.
audioout_codec	g711, -	0/7	Available codec list for SIP.
	<product< td=""><td></td><td>-: Not supported.</td></product<>		-: Not supported.
	dependent>		
motion_wintype	rectangle, polygon	0/7	The supported motion window type.
			polygon: The window is a 2D polygon shape.
			rectangle: The window is a 2D rectangle
			shape.
motion_windomain	qvga, px, std, -	0/7	The domain to set an motion window.
			qvga: a 320x240 range to represent the whole
			image.
			px: Locate a window in the image with pixels.
			std: A normalized 0~9999 range.
			-: Not supported.
smartstream_support	<boolean></boolean>	0/7	Indicate whether smart stream is supported.
smartstream_nstream	<positive integer=""></positive>	0/7	Number of stream that support smart stream.
			*only available when
			"capability_smartstream_support" is 1
smartstream_windomain	qvga, px, std, -	0/7	The domain to set an focus window.
			qvga: a 320x240 range to represent the whole
			image.
			px: Locate a window in the image with pixels.

		1	
			std: A normalized 0~9999 range.
			-: Not supported.
			*only available when
			"capability_smartstream_support" is 1
smartstream_mode_autot	<boolean></boolean>	0/7	Indicate whether autotracking smart stream is
racking			supported.
			*only available when
			"capability_smartstream_support" is 1
smartstream_mode_man	<boolean></boolean>	0/7	Indicate whether manual smart stream is
ual			supported.
			*only available when
			"capability_smartstream_support" is 1
smartstream_mode_hybri	<boolean></boolean>	0/7	Indicate whether hybrid(autotracking+
d			manual) smart stream is supported.
			*only available when
			"capability_smartstream_support" is 1
smartstream_nwindow_a	<positive integer=""></positive>	0/7	Maximum number of tracking window of
utotracking			autotracking.
			*only available when
			"capability_smartstream_support" is 1
smartstream_nwindow_m	<positive integer=""></positive>	0/7	Maximum number of tracking window of
anual			manual.
			*only available when
			"capability_smartstream_support" is 1
smartstream_nwindow_h	<positive integer=""></positive>	0/7	Maximum number of tracking window of
ybrid_autotracking			autotracking in hybrid mode.
			*only available when
			"capability_smartstream_support" is 1
smartstream_nwindow_h	<positive integer=""></positive>	0/7	Maximum number of tracking window of
ybrid_manual			manual in hybrid mode.
			*only available when
			"capability_smartstream_support" is 1
smartstream_supportqual	excellent,detailed,g	0/7	Available quality of smart stream.
ity	ood,standard,mediu		*only available when
	m,low		capability_smartstream_support" is 1
smartstream_supportmax	-	0/7	Available maxbitrate of smart stream.
- • •	1Mbps,2Mbps,4Mbp	0/7	
bitrate	1Mbps,2Mbps,4Mbp s,6Mbps,8Mbps,10M	0/7	*only available when
bitrate		0,7	

vadp_supportfeature	<positive integer=""></positive>	0/7	An 32-bit integer, each bit can be set
vaup_supportieature		0/7	separately as follows:
			Bit 0 => VADP interface
			Bit 1 => Capture video raw data
			Bit 2 => Support encode jpeg
			Bit 3 => Capture audio raw data
			Bit 4 => Support event trigger
			Bit 5 => Support license registration
			Bit 6 => Support shared memory API
			Bit 7 => Support digital signature of package
			Bit 8 => Support snapshot
vadp_npackage	<positive integer=""></positive>	0/7	Indicate the maximum number of VADP
			package that can be uploaded to the device.
thermal_support	<boolean></boolean>	0/7	Indicate whether to support thermal IC.
thermal_controlmode	auto,	0/7	Indicate the thermal control mode.
	customheater		"auto": control by camera automatically
			"customheater": the threshold of heater can
			be sepcified by user.
			* only available when
			"capability_thermal_support" is 1.
			* We support this parameter when the version
			number (httpversion) is equal or greater than
			0302a.
thermal_temperaturedete	<boolean></boolean>	0/7	Indicate whether to support temperature
ction			detection.
camctrl_httptunnel	<boolean></boolean>	0/7	Indicate whether to support httptunnel.
<not anymore="" support=""></not>			* Not support this parameter anymore when
			the version number (httpversion) is equal or
			greater than 0301b.
			* It will be replaced by
			capability_camctrl_ptztunnel.
camctrl_ptztunnel	<boolean></boolean>	0/7	Indicate whether to support ptztunnel.
			* We support this parameter when the version
			number (httpversion) is equal or greater than
			0301b.
camctrl_privilege	<boolean></boolean>	0/7	Indicate whether to support "Manage
		0,1	Privilege" of PTZ control in the Security page.
			1: support both /cgi-bin/camctrl/camctrl.cgi
			and /cgi-bin/viewer/camctrl.cgi

			0: support only /cgi-bin/viewer/camctrl.cgi
uart_httptunnel	<boolean></boolean>	0/7	Indicate whether to support HTTP tunnel for
			UART transfer.
transmission_mode	Tx,	0/7	Indicate transmission mode of the machine:
	Rx,		TX = server, $Rx = receiver box$ , $Both = DVR$ .
	Both		
network_wire	<boolean></boolean>	0/7	Indicate whether to support Ethernet.
network_wireless	<boolean></boolean>	0/7	Indicate whether to support wireless.
wireless_s802dot11b	<boolean></boolean>	0/7	Indicate whether to support wireless
			802.11b+.
wireless_s802dot11g	<boolean></boolean>	0/7	Indicate whether to support wireless 802.11g.
wireless_s802dot11n	<boolean></boolean>	0/7	Indicate whether to support wireless 802.11n.
wireless_beginchannel	1 ~ 14	0/7	Indicate the begin channel of wireless network
wireless_endchannel	1 ~ 14	0/7	Indicate the end channel of wireless network
wireless_encrypt_wep	<boolean></boolean>	0/7	Indicate whether to support wireless WEP.
wireless_encrypt_wpa	<boolean></boolean>	0/7	Indicate whether to support wireless WPA.
wireless_encrypt_wpa2	<boolean></boolean>	0/7	Indicate whether to support wireless WPA2.
derivative_brand	<boolean></boolean>	0/7	Indicate whether to support the upgrade
			function for the derivative brand. For example,
			if the value is true, the VVTK product can be
			upgraded to VVXX. (TCVV<->TCXX is
			excepted)
test_ac	<boolean></boolean>	0/7	Indicate whether to support test ac key.
version_onvifdaemon	<string></string>	0/7	Indicate ONVIF daemon version
version_onviftesttool	<string></string>	0/7	Indicate ONVIF test tool version
media_totalspace	<positive integer=""></positive>	0/7	Available memory space (KB) for media.
media_snapshot_maxpre	<positive integer=""></positive>	0/7	Maximum snapshot number before event
event			occurred.
media_snapshot_maxpost	<positive integer=""></positive>	0/7	Maximum snapshot number after event
event			occurred.
media_snapshot_maxsize	<positive integer=""></positive>	0/7	Maximum size (KB) of a snapshot.
media_videoclip_maxsize	<positive integer=""></positive>	0/7	Maximum size (KB) of a videoclip.
media_videoclip_maxleng	<positive integer=""></positive>	0/7	Maximum length (second) of a videoclip.
th			

media_videoclip_maxpree	<positive integer=""></positive>	0/7	Maximum duration (second) after event
vent			occurred in a videoclip.
image_iristype <not recommended="" to="" use<br="">this&gt;</not>	<string></string>	0/7	Indicate iris type. • "piris": P-Iris • "dciris": DC-Iris • "-": No Iris control support * When "capability_iris"=0, this value must be "-". * Note: For some box-type cameras, this value may be varied depending on mounted lens.
			<ul> <li>* We replace "capability_image_iristype" with</li> <li>" capability_image_c0_iristype ".</li> <li>* Reserved for compatibility, and suggest don't</li> <li>use this since [httpversion] &gt; 0301a</li> </ul>
image_focusassist <not recommended="" to="" use<br="">this&gt;</not>	<boolean></boolean>	0/7	Indicate whether to support focus assist. * We replace "capability_image_ focusassist " with " capability_image_c0_ focusassist ". * Reserved for compatibility, and suggest don't use this since [httpversion] > 0301a
localstorage_manageable	<boolean></boolean>	0/7	Indicate whether manageable local storage is supported.
localstorage_seamless	<boolean></boolean>	0/7	Indicate whether seamless recording is supported.
localstorage_modnum	0, <positive integer=""></positive>	0/7	The maximum MOD connection numbers.
localstorage_modversion	<string></string>	0/7	Indicate MOD daemon version
localstorage_stormgrversi	<string></string>	0/7	Indicate storage manager daemon version
localstorage_supportedge	0, <positive integer=""></positive>	0/7	An 32-bit integer, which indicates the supportive application of edge storage. If the value of this parameter is larger than 0, it means that the camera supports edge recording function. bit 0 : It supports to record directly to an on-board SD-Card.
			bit 1~: Currently, they are reserved bit, and the default value is 0.

localstorage_slconnum	0, <positive integer=""></positive>	0/7	The maximum seamless connection number.
localstorage_smartsd	<boolean></boolean>	0/7	The "Lifetime and Log SD Card" feature allows users to obtain the card's remaining lifetime information. 0: Non-support this feature 1: Support this feature * Only Sony SD card can support this function now.
remotecamctrl_master	0, <positive integer&gt;</positive 	0/7	Indicate whether to support remote auxiliary camera (master side), this value means supporting max number of auxiliary camera.
remotecamctrl_slave	<boolean></boolean>	0/7	Indicate whether to support remote camera control (slave side).
fisheyelocaldewarp_c<0~ (capability_nvideoin)-1> <product dependent=""></product>	0, <positive integer&gt;</positive 	0/7	Indicate the supported streams of local dewarp. One bit represents one supported stream. The LSB indicates stream 0. Ex: "3" means stream 0 and stream 1 support local dewarp. * Only available when "capability_fisheye" > 0

Group: capability\_daynight\_c<0~(n-1)> n denotes the value of "capability\_nvideoin"

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
support	<boolean></boolean>	0/7	Indicate whether the camera supports day/night
			mode switch
builtinir	<boolean></boolean>	0/7	Indicate whether to support built-in IR led.
externalir	<boolean></boolean>	0/7	Indicate whether to support external IR led.
smartir	<boolean></boolean>	0/7	Indicate whether to support smart IR.
ircutfilter	<boolean></boolean>	0/7	Indicate whether to support IR cut.
lightsensor	<boolean></boolean>	0/7	Indicate whether to support light sensor.
blackwhitemode	<boolean></boolean>	0/7	Indicate whether to support automatically
			switch to Black & White display during the night
			mode.
			* We support this parameter when the version
			number (httpversion) is equal or greater than
			0302a.

	_		
ircutsensitivity_type	<string></string>	0/7	Indicate the cgi interface of
			"ircutcontrol_sensitivity".
			"options": the value of
			"ircutcontrol_sensitivity" parameter is "low,
			normal,high".
			"normalize": the value of
			"ircutcontrol_sensitivity" parameter is "1~100"
			* Only available when
			"capability_daynight_c <n>_support" is 1.</n>
			* We support this parameter when the version
			number (httpversion) is equal or greater than
			0302a.
ircutsensitivity_supportlevel	0,	0/7	The value indicate the support strength level of
	<positive integer=""></positive>		ircutsensitivity.
			* Only available when
			"capability_daynight_c <n>_support" is 1 and</n>
			"capability_daynight_c <n></n>
			_ircutsensitivity_type" is normalize.
			* We support this parameter when the version
			number (httpversion) is equal or greater than
			0302a.

# Group: capability\_videoin\_c<0~(n-1)> n denotes the value of "capability\_nvideoin"

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
lens_type	fisheye, fixed,	0/7	The lens type of this channel.
	varifocal, changeable,		fisheye: Fisheye lens
	motor, -		fixed: Build-in fixed-focus lens.
	<product dependent=""></product>		varifocal: Build-in varifocal lens.
			changeable: changeable lens. Like box-type
			camera, users can install any C-Mount or
			CS-Mount lens as they wish.
			motor: Lens with motor to support zoom, focus,
			etc.
			-: N/A
			* Only available when [httpversion] >= 0301a
rotation	<boolean></boolean>	0/7	Indicate current mode whether support video
			rotation

streamcodec	<positive integer=""></positive>	0/7	Represent supported codec types of each
		-,	stream.
			This contains a list of positive integers, split by
			comma. Each one stands for a stream, and the
			definition is as following:
			Bit 0: Support MPEG4.
			Bit 1: Support MJPEG
			Bit 2: Support H.264
			Bit 3: Support H.265
mode	0, <positive integer=""></positive>	0/7	Indicate current video mode.
nmode	<positive integer=""></positive>	0/7	Indicate how many video modes supported by
			this channel.
maxsize	<wxh></wxh>	0/7	The maximum resolution of all modes in this
			channel, the unit is pixel.
nprivacymask	0, <positive integer=""></positive>	0/7	Number of privacy mask per channel
nresolution	<positive integer=""></positive>	0/7	The maximum resolution options (listed in
			"resolution") in current video mode.
resolution	A list of <wxh></wxh>	0/7	Resolution options in current video mode. These
	<product dependent=""></product>		options are the possible options for
			"videoin_c <n>_s<m>_resolution".</m></n>
			The last one is the maximum resolution in
			current mode.
maxresolution	A list of <integer></integer>	0/7	Represent supported maximum resolution of
			each stream in current video mode.
			* The element number is defined as
			"capability_nmediastream".
maxframerate	A list of <integer></integer>	0/7	Indicate frame rate that the video source
			outputs in current video mode.
			One to one mapping to the resolution in
			"resolution".
			* The element number is defined as
			"nresolution" in this group.
			* This parameter may be changed when
			"videoin_c <n>_cmosfreq"=50 or</n>
			"videoin_c <n>_modulation"=pal.</n>
			Ex: 30 fps is changed to 25 fps, 60 fps is changed
			to 50 fps, and so on.
			10 50 ips, and s0 011.

mjpeg_maxframerate	A list of <positive< th=""><th>0/7</th><th>Maximum fps that the device can encoded with</th></positive<>	0/7	Maximum fps that the device can encoded with
	Integer> and "-"		MJPEG on resolutions in current video mode.
			"-" means not support.
			* One to one mapping to the resolution in
			"resolution".
			* The element number is defined as
			"nresolution" in this group.
			* This parameter may be changed when
			"videoin_c <n>_cmosfreq"=50 or</n>
			"videoin_c <n>_modulation"=pal.</n>
			Ex: 30 fps is changed to 25 fps, 60 fps is
			changed to 50 fps, and so on.
			* Only available when 'mjpeg' is listed in
			"capability_videoin_codec".
mjpeg_maxbitrate	<positive integer="">, -</positive>	0/7	Maximum bitrates of MJPEG.
			The unit is bps.
			"-" means MJPEG does not support bit rate
			control.
			* Only available when 'mjpeg' is listed in
			"capability_videoin_codec".
h264_maxframerate	A list of <positive< td=""><td>0/7</td><td>Maximum fps that the device can encoded with</td></positive<>	0/7	Maximum fps that the device can encoded with
	Integer> and "-"		H.264 on resolutions in current video mode.
			"-" means not support.
			* One to one mapping to the resolution in
			"resolution".
			* The element number is defined as
			"nresolution" in this group.
			* This parameter may be changed when
			"videoin_c <n>_cmosfreq"=50 or</n>
			"videoin_c <n>_modulation"=pal.</n>
			Ex: 30 fps is changed to 25 fps, 60 fps is
			changed to 50 fps, and so on.
			* Only available when 'h264' is listed in
1	1	1	

h264_maxbitrate	<positive integer=""></positive>	0/7	Maximum bitrates of H.264.
		0, 1	The unit is bps.
			* Only available when 'h264' is listed in
			"capability_videoin_codec".
h265_maxframerate	A list of <positive< td=""><td>0/7</td><td>Maximum fps that the device can encoded with</td></positive<>	0/7	Maximum fps that the device can encoded with
	Integer> and "-"	0, /	H.265 on resolutions in current video mode.
			"-" means not support.
			* One to one mapping to the resolution in
			"resolution".
			* The element number is defined as
			"nresolution" in this group.
			* This parameter may be changed when
			"videoin_c <n>_cmosfreq"=50 or</n>
			"videoin_c <n>_modulation"=pal.</n>
			Ex: 30 fps is changed to 25 fps, 60 fps is
			changed to 50 fps, and so on.
			* Only available when 'h265' is listed in
			"capability_videoin_codec".
h265_maxbitrate	<positive integer=""></positive>	0/7	Maximum bitrates of H.265.
			The unit is bps.
			* Only available when 'h265' is listed in
			"capability_videoin_codec".
fisheye_mounttype	ceiling, wall, floor	0/7	Indicate the supported type.
<product dependent=""></product>	<product dependent=""></product>		wall mount: 180° panoramic view
			ceiling mount: 360° surround view without blind
			spots
			floor mount: 360° surround view without blind
			spots
			* Only available when "capability_fisheye" > 0
dintraperiod_support	<boolean></boolean>	0/7	0: Non-support "Dynamic intra frame period"
			1: Support "Dynamic intra frame period"
			"Dynamic intra frame period" can be used to
			reduce bitrate by reducing the number of
			I-frame.
			* We support this parameter when the version
			number (httpversion) is equal or greater than
			0301c.

cameraunit_name	CU8131,	0/7	A "camera unit" name of a split-type camera
	CU8171,		system, which the camera unit and the video
	СU8161-Н,		core are separated.
	СU8162-Н,		-: If the camera is not a split-type camera
	СU8163-Н,		system, the value of this parameter is "-".
	СU8361-Н,		
	,		* We support this parameter when the version
	-		number (httpversion) is equal or greater than
	<		0302b.

# Group: capability\_videoin\_c<0~(n-1)>\_localdewarp

# $(capability\_fisheyelocaldewarp\_c<0~(capability\_nvideoin)-1>>0)$

n denotes the value of "capability\_nvideoin"

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
typeceilingmount	10, 1P, 2P, 1R, 4R	0/7	Available dewarp types of ceiling and floor
			mount.
typewallmount	10, 1P, 1R, 4R	0/7	Available dewarp types of wall mount.
resolutionC1P	A list of <wxh></wxh>	0/7	Available resolutions of 1P mode of ceiling and
			floor mount.

resolutionC2P	A list of <wxh></wxh>	0/7	Available resolutions of 2P mode of ceiling and
			floor mount.
resolutionC1R	A list of <wxh></wxh>	0/7	Available resolutions of 1R mode of ceiling and
			floor mount.
resolutionC4R	A list of <wxh></wxh>	0/7	Available resolutions of 4R mode of ceiling and
			floor mount.
resolutionW1P	A list of <wxh></wxh>	0/7	Available resolutions of 1P mode of wall mount.
resolutionW1R	A list of <wxh></wxh>	0/7	Available resolutions of 1R mode of wall mount.
resolutionW4R	A list of <wxh></wxh>	0/7	Available resolutions of 4R mode of wall mount.

Group: **capability\_videoin\_c<0~(n-1)>\_mode<0~(m-1)>** n denotes the value of "capability\_nvideoin", m denotes the value of "capability\_videoin\_c<n>\_nmode"

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
rotation	<boolean></boolean>	0/7	Indicate this mode whether support video
			rotation
effectivepixel	<wxh></wxh>	0/7	The visible area of full scene in this video mode.
			The unit is pixel in source.
			* This value must <=
			"capability_videoin_c <n>_maxsize"</n>
			* If
			"effectivepixel"<"capability_videoin_c <n>_max</n>
			size", then the visible area is located at the
			center of full scene.
outputsize	<wxh></wxh>	0/7	The output size of source, equal to the captured
			size by device, in this video mode. The unit is
			pixel.
			This value is used as a basic coordinate system
			for many features, like ePTZ, privacy mask,
			motion, etc.
			* Source (most for image sensor) may perform
			scale or binning, etc on image data, and output
			data with smaller size. This parameter is
			designed to represent this.

binning	0, 1, 3	0/7	Indicate binning is used or not in this video
			mode.
			0: No binning
			1: 2x2 binning
			3: 3x3 binning
			* Binning is a technology to increase light
			sensitivity by combining multiple pixels to one.
			The drawback is reduced resolution. We design
			this parameter to disclose this information.
nresolution	<positive integer=""></positive>	0/7	How many resolution options in this video mode.
resolution	A list of <wxh></wxh>	0/7	Resolution options in this video mode.
			The last one is the maximum resolution in this
			video mode.
			* The element number is defined as
			"nresolution" in this group.
maxresolution	A list of <integer></integer>	0/7	Represent supported maximum resolution of
			each stream in current video mode.
			* The element number is defined as
			"capability_nmediastream".
maxframerate	A list of <positive< td=""><td>0/7</td><td>Indicates frame rate that the video source</td></positive<>	0/7	Indicates frame rate that the video source
	Integer>		outputs in this video mode.
			* One to one mapping to the resolution in
			"resolution".
			* The element number is defined as
			"nresolution" in this group.
			* This parameter records the frame rate when
			"videoin_c <n>_cmosfreq"=60 or</n>
			"videoin_c <n>_modulation"=ntsc</n>

maxfps_mjpeg	A list of <positive< th=""><th>0/7</th><th>Maximum fps which the device can encoded with</th></positive<>	0/7	Maximum fps which the device can encoded with
	Integer> and "-"		MJPEG on resolutions in this video mode.
			"-" means not support.
			* One to one mapping to the resolution in
			"resolution".
			* The element number is defined as
			"nresolution" in this group.
			* This parameter records the frame rate when
			"videoin_c <n>_cmosfreq"=60 or</n>
			"videoin_c <n>_modulation"=ntsc</n>
			* Only available when 'mjpeg' is listed in
			"capability_videoin_codec".
maxfps_h264	A list of <positive< td=""><td>0/7</td><td>Maximum fps which the device can encoded with</td></positive<>	0/7	Maximum fps which the device can encoded with
	Integer> and "-"		H.264 on resolutions in this video mode.
			"-" means not support.
			* One to one mapping to the resolution in
			"resolution".
			* The element number is defined as
			"nresolution" in this group.
			* This parameter records the frame rate when
			"videoin_c <n>_cmosfreq"=60 or</n>
			"videoin_c <n>_modulation"=ntsc</n>
			* Only available when 'h264' is listed in
			"capability_videoin_codec".
maxfps_h265	A list of <positive< td=""><td>0/7</td><td>Maximum fps which the device can encoded with</td></positive<>	0/7	Maximum fps which the device can encoded with
	Integer> and "-"		H.265 on resolutions in this video mode.
			"-" means not support.
			* One to one mapping to the resolution in
			"resolution".
			* The element number is defined as
			"nresolution" in this group.
			* This parameter records the frame rate when
			"videoin_c <n>_cmosfreq"=60 or</n>
			"videoin_c <n>_modulation"=ntsc</n>
			* Only available when 'h265' is listed in
			"capability_videoin_codec".
description	<string[128]></string[128]>	0/7	Description about this mode.

#### Group: capability\_videoin\_c<0~(n-1)>\_mode<0~(m-1)>\_defaultsetting\_s<0~(j-1)>

n denotes the value of "capability\_nvideoin", m denotes the value of "capability\_videoin\_c<n>\_nmode", j denotes the value of "capability\_nmediastream"

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
resolution	A list of <wxh></wxh>	0/7	Default setting of resolution options.
			"-" means not support.
			* The element number is defined as
			"capability_nresolution".
	A list of <positive< td=""><td>0/7</td><td>Default setting of mjpeg framerate on</td></positive<>	0/7	Default setting of mjpeg framerate on
hijpeg_namerate	Integer> and "-"	0, /	resolutions in this video mode.
			"-" means not support.
			* The element number is defined as
			"capability_nresolution".
 mjpeg_bitrate	A list of <positive< td=""><td>0/7</td><td>Default setting of mjpeg bitrate on resolutions in</td></positive<>	0/7	Default setting of mjpeg bitrate on resolutions in
hijpeg_bleace	Integer> and "-"	0, 1	this video mode.
			"-" means not support.
			* The element number is defined as
			"capability_nresolution".
h264_framerate	A list of <positive< td=""><td>0/7</td><td>Default setting of h264 framerate on resolutions</td></positive<>	0/7	Default setting of h264 framerate on resolutions
	Integer> and "-"	-,-	in this video mode.
			"-" means not support.
			* The element number is defined as
			"capability_nresolution".
h264_bitrate	A list of <positive< td=""><td>0/7</td><td>Default setting of h264 bitrate on resolutions in</td></positive<>	0/7	Default setting of h264 bitrate on resolutions in
	Integer> and "-"		this video mode.
			"-" means not support.
			* The element number is defined as
			"capability_nresolution".
h265_framerate	A list of <positive< td=""><td>0/7</td><td>Default setting of h265 framerate on resolutions</td></positive<>	0/7	Default setting of h265 framerate on resolutions
	Integer> and "-"		in this video mode.
			"-" means not support.
			* The element number is defined as

			"capability_nresolution".
h265_bitrate	A list of <positive< td=""><td>0/7</td><td>Default setting of h265 bitrate on resolutions in</td></positive<>	0/7	Default setting of h265 bitrate on resolutions in
	Integer> and "-"		this video mode.
			"-" means not support.
			* The element number is defined as
			"capability_nresolution".

### Group: capability\_image\_c<0~(n-1)> n denotes the value of "capability\_nvideoin"

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
basicsetting	0, <positive integer=""></positive>	0/7	A 32-bits integer, each bit can be set
			separately as follows:
			Bit 0 => Supports Brightness or not.
			Bit 1 => Supports Contrast or not.
			Bit 2 => Supports Saturation or not.
			Bit 3 => Supports Sharpness or not.
wdrpro_mode	0, 1, 2	0/7	0: Non-support WDR Pro
			1: Support WDR Pro
			2: Support WDR Pro and WDR Pro II
wdrpro_strength	0, 1	0/7	0: Non-support tuning strength of
			WDR Pro
			1: Support tuning strength of WDR Pro
			* If
			"capability_image_c <n>_wdrpro"=1,</n>
			this may be either 0 or 1.
wdrpro_supportlevel	0, <positive integer=""></positive>	0/7	This contains a list of positive integers,
			split by comma.
			If "wdrpro_mode" =1, then the value
			indicate the support strength level of
			WDR Pro.
			If "wdrpro_mode" =2, then the first
			number indicate the support strength
			level of WDR Pro, and the scecond
			number indicate the support strength
			level of WDR Pro II.
wdrpro_affect	-,	0/7	When WDR Pro or WDR Enhanced is
	exposurewin.mode:fixed:au		enabled, some features may become
	to,		malfunction or be forced to a given

Γ		-	
	exposurewin.mode.blc:disab		value. The affected functions are list
	led:,		here.
	aespeed:disabled:,		
	exposurelevel:hidden:,		The format is "Affect API
	exposurelevel:fixed: <x>,</x>		name":"Policy":"Value"
	exposurelevel:ranged: <x>-</x>		
	<x>,</x>		"Policy" can be categorized into
	exposuremode:fixed:auto		following groups:
			- (disabled) : UI turns grey and users
	<x>: nonnegative integer</x>		can't select it.
	<product dependent=""></product>		- (unchanged) : UI keeps the status as
			before and user can't change it.
			- (hidden) : UI is hidden.
			- (fixed) : UI is fixed to one selection or
			value.
			- (ranged) : UI is fixed to multiple
			selections or values.
			"Affect API name" can be described in
			hierarchy, such as
			"exposurewin.mode.blc:disabled:"
			which means blc exposure window is
			disabled. API name can be one word as
			well, such as "exposurelevel:fixed:6"
			which means exposurelevel is fixed to
			level 6.
			"Value" can be a nonnegative integer
			or NULL.
			"-" means no feature is affected.
			* When "wdrpro"=0 and "wdrc"=0,
			this must be "-"
wdrpro_description	<pre></pre>	0/7	Description about WDR Pro mode.
			* Only available when
			"capability_image_c<0~(n-1)>_wdrp
			ro_mode" > 0
wdrc_mode	0, 1	0/7	0: Non-support WDR Enhanced
warc_mode	U, 1		
udro our sortional		0/7	1: Support WDR Enhanced
wdrc_supportlevel	0, <positive integer=""></positive>	0/7	Indicate the support strength level of

			WDR Enhanced.
wdrc_affect	-,	0/7	When WDR Pro or WDR Enhanced is
	exposurewin.mode:fixed:au		enabled, some features may become
	to,		malfunction or be forced to a given
	exposurewin.mode.blc:disab		value. The affected functions are list
	led:,		here.
	aespeed:disabled:,		
	exposurelevel:hidden:,		The format is "Affect API
	exposurelevel:fixed: <x>,</x>		name":"Policy":"Value"
	exposurelevel:ranged: <x>-</x>		
	<x>,</x>		"Policy" can be categorized into
	exposuremode:fixed:auto		following groups:
			- (disabled) : UI turns grey and users

			1: Support wiper feature
			st We support this parameter when the version
			number (httpversion) is equal or greater than
			0302a.

# 7.26 Customized event script

Group: event_customtaskfile_i<0~22
------------------------------------

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
name	string[40]	6/6	Custom script identification of this entry.
date	string[4~20]	6/6	Date of custom script.
time	string[4~20]	6/6	Time of custom script.

## 7.27 Event setting

Group: event\_i<0~2>

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
name	string[40]	6/6	Identification of this entry.
enable	0, 1	6/6	Enable or disable this event.
priority	0, 1, 2	6/6	Indicate the priority of this event:
			"0"= low priority
			"1"= normal priority
			"2″= high priority
delay	1~999	6/6	Delay in seconds before detecting the next
			event.
trigger	boot,	6/6	Indicate the trigger condition:
	di,		"boot" = System boot
	pir,		"di"= Digital input
	motion,		"pir"= PIR detection
	seq,		"motion" = Video motion detection
	recnotify,		"seq" = Periodic condition
	tampering,		"visignal" = Video input signal loss.
	vi,		"recnotify" = Recording notification.
	volalarm,		"tampering" = Tamper detection.
	visignal,		"vi"= Virtual input (Manual trigger)
	vadp,		"volalarm"= Audio detection
	smartsd		"smartsd" = Lifetime detection of SD card
	<product dependent=""></product>		
triggerstatus	string[40]	6/6	The status for event trigger

di	0, <positive integer=""></positive>	6/6	Indicate the source id of di trigger.
			This field is required when trigger condition is
			"di".
			One bit represents one digital input. The LSB
			indicates DI 0.
mdwin	0, <positive integer=""></positive>	6/6	Indicate the source window id of motion
			detection.
			This field is required when trigger condition is
			"md″.
			One bit represents one window.
			The LSB indicates the 1 <sup>st</sup> window.
			For example, to detect the $1^{st}$ and $3^{rd}$ windows,
			set mdwin as 5.
mdwin0	0, <positive integer=""></positive>	6/6	Similar to mdwin. The parameter takes effect
			when profile 1 of motion detection is enabled.
vi	0, <positive integer=""></positive>	6/6	Indicate the source id of vi trigger.
			This field is required when trigger condition is
			"vi".
			One bit represents one digital input. The LSB
			indicates VI 0.
vadp	0, <positive integer=""></positive>	6/6	Indicate the source id of vadp event notification.
<product dependent=""></product>			Each bit corresponds to one vadp source, and
			the LSB indicates source id 0.
			For example, to detect event from any one of
			source id 0, 1 and 3, set vadp to 11.
			* Only available when vadp is listed in
			"capability_supporttriggertypes"
valevel	0,1	6/6	Select audio detection event.
	-,-	-, -	0: not select
			1: select
valevel0	0,1	6/6	Select audio detection profile event.
			0: not select
			1: select
inter	1~999	6/6	Interval of snapshots in minutes.

	Γ		
weekday	0~127	6/6	Indicate which weekday is scheduled.
			One bit represents one weekday.
			bit0 (LSB) = Saturday
			bit1 = Friday
			bit2 = Thursday
			bit3 = Wednesday
			bit4 = Tuesday
			bit5 = Monday
			bit6 = Sunday
			For example, to detect events on Friday and
			Sunday, set weekday as 66.
begintime	hh:mm	6/6	Begin time of the weekly schedule.
endtime	hh:mm	6/6	End time of the weekly schedule.
			(00:00 ~ 24:00 sets schedule as always on)
lowlightcondition	0, 1	6/6	Switch on white light LED in low light condition
<product dependent=""></product>			0 => Do action at all times
			1 => Do action in low-light conditions
action_do_i<0~(ndo-1)>_e	<boolean></boolean>	6/6	Enable or disable trigger digital output.
nable			* Only available when "capability_ndo" > 0
action_do_i<0~(ndo-1)>_	1~999	6/6	Duration of the digital output trigger in seconds.
duration			* Only available when "capability_ndo" > 0
action_cf_enable	<boolean></boolean>	6/6	Enable or disable sending media to SD card.
action_cf_folder	string[128]	6/6	Path to store media.
action_cf_media	NULL, 0~4,101	6/6	Index of the attached media.
			101 means "Recording Notify"
action_cf_datefolder	<boolean></boolean>	6/6	Enable this to create folders by date, time, and
			hour automatically.
action_cf_backup	<boolean></boolean>	6/6	Enable or disable the function that send media to
			SD card for backup if network is disconnected.
action_server_i<0~4>_ena	<boolean></boolean>	6/6	Enable or disable this server action.
ble			
action_server_i<0~4>_me	NULL, 0~4,101	6/6	Index of the attached media.
dia			101 means "Recording Notify"
action_server_i<0~4>_dat	<boolean></boolean>	6/6	Enable this to create folders by date, time, and
efolder			hour automatically.
action_goto_enable	<boolean></boolean>	6/6	Enable/disable ptz goto preset position on event
<product dependent=""></product>			triggered.
			* Only available when capability_ptzenabled >
			0.
L			

action_goto_name	string[40]	6/6	Specify the preset name that ptz goto on event
<product dependent=""></product>			triggered.
			* Only available when capability_ptzenabled >
			0.

# 7.28 Server setting for event action

#### Group: **server\_i**<0~4>

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
name	string[40]	6/6	Identification of this entry
type	email,	6/6	Indicate the server type:
	ftp,		"email" = email server
	http,		"ftp" = FTP server
	ns		"http" = HTTP server
			"ns" = network storage
http_url	string[128]	6/6	URL of the HTTP server to upload.
http_username	string[64]	6/6	Username to log in to the server.
http_passwd	string[64]	6/6	Password of the user.
ftp_address	string[128]	6/6	FTP server address.
ftp_username	string[64]	6/6	Username to log in to the server.
ftp_passwd	string[64]	6/6	Password of the user.
ftp_port	0~65535	6/6	Port to connect to the server.
ftp_location	string[128]	6/6	Location to upload or store the media.
ftp_passive	<boolean></boolean>	6/6	Enable or disable passive mode.
			0 = disable passive mode
			1 = enable passive mode
email_address	string[128]	6/6	Email server address.
email_sslmode	<boolean></boolean>	6/6	Enable support SSL.
email_port	0~65535	6/6	Port to connect to the server.
email_username	string[64]	6/6	Username to log in to the server.
email_passwd	string[64]	6/6	Password of the user.
email_senderemail	string[128]	6/6	Email address of the sender.
email_recipientemail	string[640]	6/6	Email address of the recipient.
ns_location	string[128]	6/6	Location to upload or store the media.

ns_username	string[64]	6/6	Username to log in to the server.
ns_passwd	string[64]	6/6	Password of the user.
ns_workgroup	string[64]	6/6	Workgroup for network storage.

# 7.29 Media setting for event action

#### Group: media\_i<0~4>

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
name	string[40]	6/6	Identification of this entry
type	snapshot,	6/6	Media type to send to the server or
	systemlog,		store on the server.
	videoclip,		
	recordmsg		
snapshot_source	0~"capability_nmediastream -1"	6/6	Indicate the source of media stream.
			0 means the first stream.
			1 means the second stream and etc.
			2 means the third stream and etc.
			3 means the fourth stream and etc.
snapshot_prefix	string[16]	6/6	Indicate the prefix of the filename.
			media_i0=> Snapshot1_
			media_i1=> Snapshot2_
			media_i2=> Snapshot3_
			media_i3=> Snapshot4_
			media_i4=> Snapshot5_
snapshot_datesuffix	0, 1	6/6	Add date and time suffix to filename:
			1 = Add date and time suffix.
			0 = Do not add.
snapshot_preevent	0~"	6/6	Indicates the number of pre-event
	capability_media_snapshot_maxpr		images.
	eevent"		
snapshot_postevent	0~"	6/6	Indicates the number of post-event
	capability_media_snapshot_maxpo		images.
	stevent"		
videoclip_source	0~"capability_nmediastream -1"	6/6	Indicate the source of media stream.
			0 means the first stream.
			1 means the second stream and etc.
			2 means the third stream and etc.
			3 means the fourth stream and etc.

videoclip_prefix	string[16]	6/6	Indicate the prefix of the filename.
videoclip_preevent	0 ~ "	6/6	Indicates the time for pre-event
	capability_media_videoclip_maxpre		recording in seconds.
	event"		
videoclip_maxduration	1 ~ "	6/6	Maximum duration of one video clip in
	capability_media_videoclip_maxlen		seconds.
	gth"		
videoclip_maxsize	50 ~ "	6/6	Maximum size of one video clip file in
	capability_media_videoclip_maxsiz		Kbytes.
	e"		

# 7.30 Recording

Group: recording\_i<0~1>

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
name	string[40]	6/6	Identification of this entry.
trigger	schedule,	6/6	The event trigger type
	networkfail		schedule: The event is triggered by schedule
			networkfail: The event is triggered by the
			failure of network connection.
enable	<boolean></boolean>	6/6	Enable or disable this recording.
priority	0, 1, 2	6/6	Indicate the priority of this recording:
			"0" indicates low priority.
			"1" indicates normal priority.
			"2" indicates high priority.
source	0~"capability_nmediastream-1"	6/6	Indicate the source of media stream.
			0 means the first stream.
			1 means the second stream and so on.

maxretentiontime	<string></string>	6/6	To specify the expired time for automatic clean
			up, and it only takes effect for video clip
			generated by recording_i <0~1>.
			Format is
			"``P[Y]Y[MM]M[DDD]DT[hh]H[mm]M[ss]S'
			, similar with ISO8601 with symbols P
			Ex. P7D, it means 7 days. P1DT10H, it means
			1 days and 10 hours.
			The parameter takes effect when
			autocleanup_
			maxretentiontime_recording_enabled is
			enabled.
limitsize	<boolean></boolean>	6/6	0: Entire free space mechanism
			1: Limit recording size mechanism
cyclic	<boolean></boolean>	6/6	0: Disable cyclic recording
			1: Enable cyclic recording
notify	<boolean></boolean>	6/6	0: Disable recording notification
			1: Enable recording notification
notifyserver	0~31	6/6	Indicate which notification server is
			scheduled.
			One bit represents one application server
			(server_i0~i4).
			bit0 (LSB) = server_i0.
			bit1 = server_i1.
			bit2 = server_i2.
			bit3 = server_i3.
			bit4 = server_i4.
			For example, enable server_i0, server_i2, and
			server_i4 as notification servers; the
			notifyserver value is 21.

weekday	0~127	6/6	Indicate which weekday is scheduled.
			One bit represents one weekday.
			bit0 (LSB) = Saturday
			bit1 = Friday
			bit2 = Thursday
			bit3 = Wednesday
			bit4 = Tuesday
			bit5 = Monday
			bit6 = Sunday
			For example, to detect events on Friday and
			Sunday, set weekday as 66.
begintime	hh:mm	6/6	Start time of the weekly schedule.
endtime	hh:mm	6/6	End time of the weekly schedule.
			(00:00~24:00 indicates schedule always on)
prefix	string[16]	6/6	Indicate the prefix of the filename.
cyclesize	100~	6/6	The maximum size for cycle recording in
			Kbytes when choosing to limit recording size.
reserveamount	0~1500000	6/6	The reserved amount in Mbytes when
			choosing cyclic recording mechanism.
dest	cf,	6/6	The destination to store the recorded data.
	0~4		"cf" means local storage (CF or SD card).
			"0" means the index of the network storage.
cffolder	string[128]	6/6	Folder name.
maxsize	100~2000	6/6	Unit: Mega bytes.
			When this condition is reached, recording file
			is truncated.
maxduration	60~3600	6/6	Unit: Second
			When this condition is reached, recording file
			is truncated.
adaptive_enable	<boolean></boolean>	6/6	Indicate whether the adaptive recording is
			enabled
adaptive_preevent	0~9	6/6	Indicate when is the adaptive recording
			started before the event trigger point
			(seconds)
adaptive_postevent	0~10	6/6	Indicate when is the adaptive recording
			stopped after the event trigger point
			(seconds)

# 7.31 HTTPS

Group: **https** (capability.protocol.https > 0)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	6/6	To enable or disable secure HTTP.
policy	<boolean></boolean>	6/6	If the value is 1, it will force HTTP connection
			redirect to HTTPS connection
method	auto,	6/6	auto =>Create self-signed certificate
	manual,		automatically.
	install		manual =>Create self-signed certificate
			manually.
			install =>Create certificate request and install.
status	-3 ~ 1	6/6	Specify the https status.
			-3= Certificate not installed
			-2 = Invalid public key
			-1 = Waiting for certificate
			0= Not installed
			1 = Active
countryname	string[2]	6/6	Country name in the certificate information.
stateorprovincename	string[128]	6/6	State or province name in the certificate
			information.
localityname	string[128]	6/6	The locality name in thecertificate information.
organizationname	string[64]	6/6	Organization name in the certificate
	VIVOTEK Inc.		information.
unit	string[64]	6/6	Organizational unit name in thecertificate
	VIVOTEK Inc.		information.
commonname	string[64]	6/6	Common name in the certificate information.
	www.vivotek.com		
validdays	0 ~ 3650	6/6	Valid period for the certification.

### 7.32 Storage management setting

Group: **disk\_i<0~(n-1)>** n is the total number of storage devices. (capability.storage.dbenabled > 0)

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
cyclic_enabled	<boolean></boolean>	6/6	Enable cyclic storage method.
autocleanup_enabled	<boolean></boolean>	6/6	Enable automatic clean up method.
<not recommended="" td="" to="" use<=""><td></td><td></td><td>Expired and not locked media files will be</td></not>			Expired and not locked media files will be
this>			deleted.
			* For forward compatibility reservations, but
			only group disk_i0_autocleanup is effective.
			* Not recommended to use this. Please refers
			"autocleanup" group.
			* This parameter will not be used after the
			version number (httpversion) is equal or greater
			than 0400a.
autocleanup_maxage	<positive integer=""></positive>	6/6	To specify the expired days for automatic clean
<not recommended="" td="" to="" use<=""><td></td><td></td><td>up.</td></not>			up.
this>			* For forward compatibility reservations, but
			only group disk_i0_autocleanup is effective.
			* Not recommended to use this. Please refers
			"autocleanup" group.
			* This parameter will not be used after the
			version number (httpversion) is equal or greater
			than 0400a.

Currently it's only for local storage (SD, CF card), so n is equal to 1.

#### Group: **autocleanup** (capability.localstorage.supportedge > 0)

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enabled	<boolean></boolean>	6/6	Enable automatic clean up method.
			Expired and not locked media files will be
			deleted.
maxretentiontime_recordin	<boolean></boolean>	6/6	Enable automatic clean up method for video clip
g_enabled			generated by recording task.
			The parameter takes effect when
			autocleanup_enabled is enabled.

maxretentiontime_recordin	<string></string>	6/6	To specify the expired time for automatic clean
g_i <0~1>_maxage			up, and it only takes effect for video clip
			generated by recording_i <0~1>.
			Format is
			"`P[Y]Y[MM]M[DDD]DT[hh]H[mm]M[ss]S'
			, similar with ISO8601 with symbols P
			Ex. P7D, it means 7 days. P1DT10H, it means 1
			days and 10 hours.
			The parameter takes effect when autocleanup_
			maxretentiontime_recording_enabled is
			enabled.
maxretentiontime_others_e	<boolean></boolean>	6/6	Enable automatic clean up method for all media
nabled			files except media files generated by recording
			task.
			The parameter takes effect when
			autocleanup_enabled is enabled.
maxretentiontime_others_	<string></string>	6/6	To specify the expired time for automatic clean
maxage			up, and it takes effect for all media files except
			media files generated by recording task.
			Format is
			"``P[Y]Y[MM]M[DDD]DT[hh]H[mm]M[ss]S'
			, similar with ISO8601 with symbols P
			Ex. P7D, it means 7 days. P1DT10H, it means 1
			days and 10 hours.
			The parameter takes effect when
			autocleanup_maxretentiontime_others_enabled
			is enabled.

### 7.33 Region of interest

Group: **roi\_c<0~(n-1)>** for n channel product. (capability.eptz > 0)

m denotes the value of "capability\_nmediastream".

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
s<0~(m-2)>_home	<w,h></w,h>	1/6	ROI left-top corner coordinate.* If the minimal
	<product dependent=""></product>		window size is 64x64, then the
			"win_i0_home"=(0~resolution_W-64,
			0~resolution_H-64), which the resolution is the
			value in current stream.
s<0~(m-2)>_size	<wxh></wxh>	1/6	ROI width and height. The width value must be
	<product dependent=""></product>		multiples of 16 and the height value must be
			multiples of 8* The minimal window size is
			64x64
s <m-1>_home</m-1>	<w,h></w,h>	1/7	ROI left-top corner coordinate.* If the minimal
	<product dependent=""></product>		window size is 64x64, then the
			"win_i0_home"=(0~resolution_W-64,
			0~resolution_H-64), which the resolution is the
			value in current stream.
s <m-1>_size</m-1>	<wxh></wxh>	1/7	ROI width and height. The width value must be
	<product dependent=""></product>		multiples of 16 and the height value must be
			multiples of 8* The minimal window size is
			64x64

## 7.34 ePTZ setting

#### Group: **eptz\_c<0~(n-1)>** for n channel product. (capability.eptz > 0)

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
osdzoom	<boolean></boolean>	1/4	Indicates multiple of zoom in is "on-screen
<not recommended="" td="" to="" use<=""><td></td><td></td><td>display" or not.</td></not>			display" or not.
this>			
			* Reserved for compatibility, and suggest don't
			use this since [httpversion] > 0302a
			* We replace "eptz_c<0~(n-1)>_osdzoom" with
			" videoin_c<0~(n-1)>_zoomratiodisplay".
smooth	<boolean></boolean>	1/4	Enable the ePTZ "move smoothly" feature

tiltspeed	-5 ~ 5	1/7	Tilt speed
			(It should be set by eCamCtrl.cgi rather than by
			setparam.cgi.)
panspeed	-5 ~ 5	1/7	Pan speed
			(It should be set by eCamCtrl.cgi rather than by
			setparam.cgi.)
zoomspeed	-5 ~ 5	1/7	Zoom speed
			(It should be set by eCamCtrl.cgi rather than by
			setparam.cgi.)
autospeed	1 ~ 5	1/7	Auto pan/patrol speed
			(It should be set by eCamCtrl.cgi rather than by
			setparam.cgi.)
rotatespeed	1 ~ 5	1/7	Rotate speed (only for Fisheye series)
			* Only available when "capability_fisheye" is 1
			and "capability_fisheyelocaldewarp_c <n>" is 0</n>
			(It should be set by eCamCtrl.cgi rather than by
			setparam.cgi.)

Group: **eptz\_c<0~(n-1)>\_s<0~(m-1)>** for n channel product and m is the number of streams which support ePTZ. (capability.eptz > 0)

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
patrolseq	string[120]	1/4	The patrol sequence of ePTZ. All the patrol
			position indexes will be separated by ","
patroldwelling	string[160]	1/4	The dwelling time (unit: second) of each patrol
			point, separated by ",".
preset_i<0~19>_name	string[40]	1/7	Name of ePTZ preset.
			(It should be set by ePreset.cgi rather than by
			setparam.cgi.)
preset_i<0~19>_pos	<w,h></w,h>	1/7	Left-top corner coordinate of the preset.
	<product dependent=""></product>		(It should be set by ePreset.cgi rather than by
			setparam.cgi.)
preset_i<0~19>_size	<wxh></wxh>	1/7	Width and height of the preset.
	<product dependent=""></product>		(It should be set by ePreset.cgi rather than by
			setparam.cgi.)

### 7.35 Focus Window setting

Group: focuswindow\_c<0~(n-1)> for n channel products

n denotes the value of "capability\_nvideoin".

#### (capability\_image\_c<0~(n-1)>\_backfocus=1 or capability\_image\_c<0~(n-1)>\_remotefocus=1)

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
win_i0_enable	<boolean></boolean>	4/4	Enable or disable the window.
win_i0_home	<w,h></w,h>	4/4	Left-top corner coordinate of the window.
	<product dependent=""></product>		* If the minimal window size is 192x144, then
			the "win_i0_home"=(0~resolution_W-192,
			0~resolution_H-144), which the resolution is
			the value in current stream.
win_i0_size	<wxh></wxh>	4/4	Width and height of the window.
	<product dependent=""></product>		* The minimal window size is 192x144

### 7.36 Seamless recording setting

Group: **seamlessrecording** (capability.localstorage.seamless> 0)

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
diskmode	seamless,	1/6	"seamless" indicates enable seamless recording.
	manageable		"manageable" indicates disable seamless
			recording.
maxconnection	3	1/7	Maximum number of connected seamless
			streaming.
enable	<boolean></boolean>	1/7	Indicate whether seamless recording is
			recording to local storage or not at present.
			(Read only)
guid<0~2>_id	string[127]	1/7	The connected seamless streaming ID.
			(Read only)
guid<0~2>_number	0~3	1/7	Number of connected seamless streaming with
			guid<0~2>_id.
			(Read only)

# 7.37 VIVOTEK Application Development Platformsetting

#### Group: vadp

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
version	<string></string>	6/7	Indicate the VADP version.
resource_total_memory	0, <positive integer=""></positive>	6/7	Indicate total available memory size for VADP
			modules.
resource_total_storage	0, <positive integer=""></positive>	6/7	Indicate total size of the internal storage
			space for storing VADP modules.
resource_free_memory	0, <positive integer=""></positive>	6/7	Indicate free memory size for VADP modules.
resource_free_storage	0, <positive integer=""></positive>	6/7	Indicate current free storage size for
			uploading VADP modules.
module_number	0, <positive integer=""></positive>	6/7	Record the total module number that already
			stored in the system.
module_order	string[40]	6/6	The execution order of the enabled modules.
module_save2sd	<boolean></boolean>	6/6	Indicate if the module should be saved to SD
			card when user want to upload it.
			If the value is false, save module to the
			internal storage space and it will occupy
			storage size.
number	string[128]	6/7	This number is used to register license key for
			VADP application.

#### Group: vadp\_module\_i<0~(n-1)> for n VADP package number (capability\_vadp\_npackage > 0)

n denotes the value of "capability\_vadp\_npackage".

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	6/6	Indicate if the module is enabled or not.
			If yes, also add the index of this module to the
			module_order.
name	string[40]	6/6	Module name
extendedname	string[40]	6/6	Extended module name. If this value is not
			blank, it will be shown on the VADP UI first
			instead of vadp_module_i <n>_name.</n>
url	string[120]	6/6	Define the URL string after the IP address if the
			module provides it own web page.
vendor	string[40]	6/6	The provider of the module.

vendorurl	string[120]	6/6	URL of the vendor.
version	string[40]	6/6	Version of the module.
license	string[40]	6/6	Indicate the license status of the module.
licmsg	string[128]	6/6	Indicate the message that will be show on
			license status when mouse over.
path	string[40]	6/6	Record the storage path of the module.
initscr	string[40]	6/6	The script that will handle operation
			commands from the system.
status	string[40]	6/6	Indicate the running status of the module.
statmsg	string[128]	6/6	Indicate the message that will be show on the
			running status when mouse over.
vvtklicensemec	string[40]	6/7	Indicate the module use VIVOTEK license
			mechanism

Group: **vadp\_schedule\_i**<0~(n-1)> for n VADP package number

n denotes the value of "capability\_vadp\_npackage".

(Only available when capability\_vadp\_npackage > 0 and the version number of "vadp\_version" is equal or greater than 1.3.2.0)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	6/6	Enable or disable the schedule mode to
			control the execution of the VADP package
begintime	hh:mm	6/6	Begin time of the schedule
endtime	hh:mm	6/6	End time of the schedule

#### Group: vadp\_event

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
ntrigger	0, <positive integer=""></positive>	6/7	Indicate the number of topics to be transferred
			to event manager for trigger.
triggerlist_i<0~(n-1)>_to	string[256]	6/6	Indicate the event notification with this topic
pic			will be transferred to event manager as trigger.
			n is equal to ntrigger above.

## 7.38 camera PTZ control

#### Group: **camctrl** (capability.camctrl.ptztunnel > 0)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enableptztunnel	<boolean></boolean>	1/4	Enable PTZ tunnel for camera control.

#### Group: camctrl\_c<0~(n-1)> for n channel products (capability.ptzenabled > 0)

n denotes the value of "capability\_nvideoin"

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
panspeed	-5 ~ 5	1/4	Pan speed
tiltspeed	-5 ~ 5	1/4	Tilt speed
zoomspeed	-5 ~ 5	1/4	Zoom speed
focusspeed	-5 ~ 5	1/4	Auto focus speed
patrolseq	string[120]	1/4	(For external device)
			The indexes of patrol points, separated by ","
patroldwelling	string[160]	1/4	(For external device)
			The dwelling time of each patrol point,
			separated by ","
preset_i<0~(capability_n	string[40]	1/4	Name of the preset location.
preset -1)>_name			
preset_i<0~(capability_n	0 ~ 999	1/4	The dwelling time of each preset location
preset -1)>_ dwelling			
uart	0 ~	1/4	Select corresponding uart
	(capability_nuart -1)		(capability.nuart>0).
cameraid	0~255	1/4	Camera ID controlling external PTZ camera.
isptz	0 ~ 2	1/4	0: disable PTZ commands.
			1: enable PTZ commands with PTZ driver.
			2: enable PTZ commands with UART tunnel.
			* Only available when bit7 of
			capability_ptzenabled is 1
disablemdonptz	<boolean></boolean>	1/4	Disable motion detection on PTZ operation.

### 7.39 camera PTZ control (SD series)

Group: **camctrl** (the bit7 of capability\_ptzenabled is 0 and the bit4 of capability\_ptzenable is 1)

k denotes the value of "capability\_npreset"

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
ccdtype	string[16]	6/7	(Internal used, read only)
motortype	string[16]	6/7	(Internal used, read only)
cameraid	1 ~ 255	1/4	Camera ID controlling external PTZ
			camera.
			Note:
			Please set your speed dome to the
			appropriate baud rate, and Camera ID,
			e.g. 2400bps, camera ID 1,2,3,,,,etc.
			All Camera IDs on the same controlling
			system (NVR or rs485 keyboard) have
			to be distinct.
			Therefore, once you send a controlling
			signal, each camera will only accept the
			inputs with the corresponding ID.
panspeed	-5 ~ 5	1/4	Pan speed
tiltspeed	-5 ~ 5	1/4	Tilt speed
zoomspeed	-5 ~ 5	1/4	Zoom speed
autospeed	-5 ~ 5	1/4	Auto pan speed
focusspeed	-5 ~ 5	1/4	Auto focus speed
preset_i<0~(k-1)>_name	string[40]	1/4	Name of the preset location.
preset_i<0~(k-1)>_pan	capability_ptz_minpan ~	1/4	Pan position at each preset location.
	capability_ptz_maxpan		
preset_i<0~(k-1)>_tilt	capability_ptz_mintilt ~	1/4	Tilt position at each preset location.
	capability_ptz_maxtilt		
preset_i<0~(k-1)>_zoom	capability_ptz_minzoom ~	1/4	Zoom position at each preset location.
	capability_ptz_maxzoom		
preset_i<0~(k-1)>_focus	capability_ptz_minfocus ~	1/4	Focus position at each preset location.
	capability_ptz_maxfocus		
preset_i<0~(k-1)>_fliped	<boolean></boolean>	1/4	Flip side at each preset location.
patrol_i<0~39>_name	string[40]	1/4	(For internal device)
			The name of patrol location
patrol_i<0~39>_ dwelling	0 ~ 999	1/4	(For internal device)

			The dwelling time of each patrol location
disablemdonptz	<boolean></boolean>	1/4	Disable motion detection on PTZ
			operation.
defaulthome	<boolean></boolean>	1/4	This field tells system to use default
			home position or not.
axisx	capability_ptz_minpan ~	1/4	Custom home pan position.
	capability_ptz_maxpan		
axisy	capability_ptz_mintilt ~	1/4	Custom home tilt position.
	capability_ptz_maxtilt		
axisz	capability_ptz_minzoom ~	1/4	Custom home zoom position.
	capability_ptz_maxzoom		
axisf	capability_ptz_minfocus ~	1/4	Custom home focus position.
	capability_ptz_maxfocus		
axisflip	<boolean></boolean>	1/4	Custom home flip side.
returnhome	<boolean></boolean>	1/4	Enable/disable return home while idle.
returnhomeinterval	1~999	1/4	While idle over this time interval, idle
			action will be taken.
digitalzoom	<boolean></boolean>	1/4	Enable/disable digital zoom
idleaction_enable	<boolean></boolean>	1/4	Enable/disable idle action while idle
idleaction_type	pan,patrol,home,objtrack,	1/4	This field tells what kind of action should
	prev		be taken while idle.
idleaction_interval	1~999	1/4	While idle over this time interval, idle
			action will be taken.
horizontalalignment	<boolean></boolean>	1/4	Once you enable this feature, a
			reference line will be visible when the
			camera tilt is under 0° or over 180° to
			help verify that the camera is mounted
			to a flat surface.
osdzoom	<boolean></boolean>	1/4	Show zoom ratio text on video.
zoomenhance	<boolean></boolean>	1/4	Enable / Disable zoom enhancement
tour_index	-1, 0~19	1/4	Index of the enabled tour group, from 0
			to 19.
			Set -1 to disable all the tour groups.
tour_i<0~19>_name	string[40]	1/4	Name of the tour.
tour_i<0~19>_type	<boolean></boolean>	1/4	0 = Recorded tour
			1 = Preset tour
tour_i<0~19>_speed	-5 ~ 5	1/4	Preset tour: pan and tilt speed when
			moving between presets.
			Recorded tour: unnecessary.

tour_i<0~19>_checklist	string[512]	1/4	The indexes of preset positions, separated by ","
tour_i<0~19>_dwelltime	string[512]	1/4	Preset tour: time to wait before moving to the next preset position, separated by "," Recorded tour: number of seconds to wait before continuing a loop tour.

## 7.40 UART control

#### Group: **uart** (capability.nuart > 0 and capability.fisheye = 0)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
ptzdrivers_i<0~19,	string[40]	1/4	Name of the PTZ driver.
127>_name			
ptzdrivers_i<0~19,	string[128]	1/4	Full path of the PTZ driver.
127>_location			
enablehttptunnel	<boolean></boolean>	1/4	Enable HTTP tunnel channel to control UART.

#### Group: **uart\_i<0~(n-1)>** n is uart port count (capability.nuart > 0 and capability.fisheye = 0)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
baudrate	110,300,600,1200,	4/4	Set baud rate of COM port.
	2400,3600,4800,72		
	00,9600,19200,384		
	00,57600,115200		
databit	5,6,7,8	4/4	Data bits in a character frame.
paritybit	none,	4/4	For error checking.
	odd,		
	even		
stopbit	1,2	4/4	1
			2-1.5 , data bit is 5
			2-2
uartmode	rs485,	4/4	RS485 or RS232.
	rs232		
customdrvcmd_i<0~9>	string[128]	1/4	PTZ command for custom camera.

speedlink_i<0~4>_name	string[40]	1/4	Additional PTZ command name.
speedlink_i<0~4>_cmd	string[40]	1/4	Additional PTZ command list.
ptzdriver	0~19,	1/4	The PTZ driver is used by this COM port.
	127 (custom),		
	128 (no driver)		

### 7.41 UART control (SD series)

Group: **uart** (capability.nuart > 0 and the bit7 of capability\_ptzenabled is 0, the bit4 of capability\_ptzenable is 1)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
cameraid	1~255	4/4	Camera ID controlling external PTZ camera.
			Note:
			Please set your speed dome to the appropriate
			baud rate, and Camera ID, e.g. 2400bps,
			camera ID 1,2,3,,,,etc.
			All Camera IDs on the same controlling system
			(NVR or rs485 keyboard) have to be distinct.
			Therefore, once you send a controlling signal,
			each camera will only accept the inputs with
			the corresponding ID.
baudrate	110,300,600,1200,	4/4	Set baud rate of COM port.
	2400,3600,4800,72		
	00,9600,19200,384		
	00,57600,115200		
databit	5,6,7,8	4/4	Data bits in a character frame.
paritybit	none,	4/4	For error checking.
	odd,		
	even		
stopbit	1,2	4/4	1
			2-1.5 , data bit is 5
			2-2
uartmode	rs485	4/7	RS485 mode.

## 7.42 Lens configuration

Group: lens for n channel products

n denotes the value of "capability\_nvideoin"

#### (capability.image.c<0~(n-1)>.lensconfiguration.support = 1)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
selected	<string></string>	6/7	Current selected lens profile.
			e.g. lens_selected=lens_default_i0, it means
			choosen lens configuration is i0 lens of default
			group.

#### Group: lens\_default

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
totalnumbers	0, <positive integer=""></positive>	6/7	Totoal support number of the default lens
			profiles

#### Group: lens\_user

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
totalnumbers	0, <positive integer=""></positive>	6/7	Totoal support number of the user lens profiles

#### Group: lens\_default\_i<0~(n-1)> n is lens\_default\_totalnumbers

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
name	<string></string>	6/7	Default lens name

#### Group: lens\_user\_i<0~(n-1)> n is lens\_user\_totalnumbers

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
name	<string></string>	6/7	User-defined lens name

## 7.43 Fisheye info

#### Group: **fisheyeinfo** (capability.fisheye > 0)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
revisedcenteraxis	<coordinate></coordinate>	6/7	The actual center axis coordinate
radius	0, <positive< td=""><td>6/7</td><td>The actual center radius</td></positive<>	6/7	The actual center radius
	integer>		

### 7.44 Fisheye local dewarp setting

Group: **fisheyedewarp\_c<0~(n-1)>** (capability\_fisheyelocaldewarp\_c<0~(capability\_nvideoin)-1>> 0)

n denotes the value of "capability	_nvideoin", m denotes the value of "	'capability_nmediastream"
------------------------------------	--------------------------------------	---------------------------

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
panspeed	-5 ~ 5	1/4	Pan speed of regional view
	<integer></integer>		
tiltspeed	-5 ~ 5	1/4	Tilt speed of regional view
	<integer></integer>		
zoomspeed	-5 ~ 5	1/4	Zoom speed of regional
	<integer></integer>		
s<0~(m-2)>_panorama_	0~359	1/4	Initial pan position of panorama view.
panstart	<integer></integer>		(only available for 1P and 2P mode at ceiling or
			floor mount)
s<0~(m-2)>_region_pan	-90~359	1/4	Pan home angle of regional view
	<integer></integer>		Pan range of ceiling/floor mount is $[0\sim359]$ .
			Pan range of wall mount is $[-90 \sim 90]$ .
s<0~(m-2)>_region_tilt	-90~90	1/4	Tilt home angle of regional view
	<integer></integer>		Tilt range of ceiling/floor mount is [0~90].
			Tilt range of wall mount is [-90~90].
s<0~(m-2)>_region_zoo	100~300	1/4	Zoom home ratio of regional view
m	<integer></integer>		

### 7.45 PIR behavior define

Group: **pir** (capability.npir > 0)

NAME	VALUE	SECURITY	DESCRIPTION
		(get/set)	
enable	<boolean></boolean>	1/1	Enable/disable PIR

### 7.46 Auto tracking setting

Group: <b>autotrack</b> (capbility_image_c<0~(capability_nvideoin)-1>_autotrack_support >	Group: autotrack	(capbility_image	_c<0~(capability_	_nvideoin)-1>_	_autotrack_support > (	))
---	------------------	------------------	-------------------	----------------	------------------------	----

PARAMETER	VALUE	SECURITY	DESCRIPTION
		(get/set)	
objsize_type	-1~2	1/4	Type of object size.
			-1 : customized width and height
			$0:$ object size = $30 \times 30$
			$1 : object size = 10 \times 20$
			$2:$ object size = $10 \times 10$
objsize_customized_width	10~320	1/4	The minimum width of tracking target.
objsize_customized_height	10~240	1/4	The minimum height of tracking target.
sensitivity	0~2	1/4	Tracking sensitivity.
			0: Low
			1: Medium
			2: High

# 8. Useful Functions

### 8.1 Drive the Digital Output (capability.ndo > 0)

**Note:** This request requires Viewer privileges. **Method:** GET/POST

Syntax:
http:// <servername>/cgi-bin/dido/setdo.cgi?do1=<state>[&amp;do2=<state>]</state></state></servername>
[&do3= <state>][&amp;do4=<state>]</state></state>

Where state is 0 or 1; "0" means inactive or normal state, while "1" means active or triggered state.

PARAMETER	VALUE	DESCRIPTION
do <num></num>	0, 1	0 – Inactive, normal state
		1 – Active, triggered state

**Example:** Drive the digital output 1 to triggered state and redirect to an empty page.

http://myserver/cgi-bin/dido/setdo.cgi?do1=1

## 8.2 Query Status of the Digital Input(capability.ndi > 0)

Note: This request requires Viewer privileges

Method: GET/POST

Syntax:

http://<servername>/cgi-bin/dido/getdi.cgi?[di0][&di1][&di2][&di3]

If no parameter is specified, all of the digital input statuses will be returned.

Return:

HTTP/1.0 200 OK\r\n Content-Type: text/plain\r\n Content-Length: <*length*>\r\n \r\n [di0=<state>]\r\n [di1=<state>]\r\n [di2=<state>]\r\n [di3=<state>]\r\n

where <state> can be 0 or 1.

Example: Query the status of digital input 1 .

Request: http://myserver/cgi-bin/dido/getdi.cgi?di1 Response: HTTP/1.0 200 OK\r\n Content-Type: text/plain\r\n Content-Length: 7\r\n \r\n di1=1\r\n

### 8.3 Query Status of the Digital Output (capability.ndo > 0)

Note: This request requires Viewer privileges

Method: GET/POST

Syntax:

http://<servername>/cgi-bin/dido/getdo.cgi?[do0][&do1][&do2][&do3]

If no parameter is specified, all the digital output statuses will be returned.

Return:
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: \r\n
\r\n
[do0= <state>]\r\n</state>
[do1= <state>]\r\n</state>
[do2= <state>]\r\n</state>
[do3= <state>]\r\n</state>

where <*state*> can be 0 or 1.

**Example:** Query the status of digital output 1.

Request: http://myserver/cgi-bin/dido/getdo.cgi?do1 Response:

HTTP/1.0 200 OK\r\n Content-Type: text/plain\r\n Content-Length: 7\r\n

### 8.4 Capture Single Snapshot

Note: This request requires Normal User privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/viewer/video.jpg?[channel=<value>][&resolution=<value>]
[&quality=<value>][&streamid=<value>]
```

If the user requests a size larger than all stream settings on the server, this request will fail.

PARAMETER	VALUE	DEFA	DESCRIPTION
		ULT	
channel	0~(n-1)	0	The channel number of the video source.
resolution	IP8165:	0	The resolution of the image.
	(160~640, 120~360)		
	IP8155:		
	(160~1280, 120~1024)		
quality	1~5	3	The quality of the image.
streamid	0~(m-1)	2	The stream number.

The server will return the most up-to-date snapshot of the selected channel and stream in JPEG format. The size and quality of the image will be set according to the video settings on the server.

Return:

HTTP/1.0 200 OK\r\n Content-Type: image/jpeg\r\n [Content-Length: <image size>\r\n]

<binary JPEG image data>

### 8.5 Account Management

**Note:** This request requires Administrator privileges. **Method:** GET/POST

Syntax:

http://<servername>/cgi-bin/admin/editaccount.cgi?

method=<value>&username=<name>[&userpass=<value>][&privilege=<value>]

[&privilege=<value>][...][&return=<return page>]

PARAMETER	VALUE	DESCRIPTION	
method	Add	Add an account to the server. When using this method, the "username	
		field is necessary. It will use the default value of other fields if not	
		specified.	
	Delete	Remove an account from the server. When using this method, the	
		"username" field is necessary, and others are ignored.	
	edit	Modify the account password and privilege. When using this method,	
		the"username" field is necessary, and other fields are optional. If not	
		specified, it will keep the original settings.	
username	<name></name>	The name of the user to add, delete, or edit.	
userpass	<value></value>	The password of the new user to add or that of the old user to modify.	
		The default value is an empty string.	
Privilege	<value></value>	The privilege of the user to add or to modify.	
	viewer	Viewer privilege.	
	operator	Operator privilege.	
	admin	Administrator privilege.	
Return	<return page=""></return>	Redirect to the page < <i>return page</i> >after the parameter is assigned.	
		The < <i>return page</i> >can be a full URL path or relative path according to	
		the current path. If you omit this parameter, it will redirect to an	
		empty page.	

### 8.6 System Logs

**Note:** This request require Administrator privileges. **Method:** GET/POST

Syntax:

http://<servername>/cgi-bin/admin/syslog.cgi

Server will return the most up-to-date system log.

Return: HTTP/1.0 200 OK\r\n Content-Type: text/plain\r\n Content-Length: <syslog length>\r\n \r\n <system log information>\r\n

### 8.7 Upgrade Firmware

**Note:** This request requires Administrator privileges. Method: POST

Syntax:

http://<servername>/cgi-bin/admin/upgrade.cgi

Post data:

fimage=<file name>[&return=<return page>]\r\n \r\n <multipart encoded form data>

Server will accept the file named <file name> to upgrade the firmware and return with <return page> if indicated.

### 8.8 ePTZ Camera Control (capability.eptz > 0 and

### capability\_fisheye = 0)

**Note:** This request requires camctrl privileges. **Method:** GET/POST

Syntax:

http://< <i>servername</i> >/cgi-bin/camctrl/eCamCtrl.cgi?channel= <value>&amp;stream=<value></value></value>
[&move= <value>] - Move home, up, down, left, right</value>
[&auto= <value>] – Auto pan, patrol</value>
[&zoom= <value>] -Zoom in, out</value>
[&zooming= <value>&amp;zs=<value>] -Zoom without stopping, used for joystick</value></value>
[&x= <value>&amp;y=<value>&amp;w=<value>&amp;h=<value>&amp;resolution=<value>] - Zoom in, out on a specific area</value></value></value></value></value>
[&vx= <value>&amp;vy=<value>&amp;vs=<value>] - Shift without stopping, used for joystick</value></value></value>
[&x= <value>&amp;y=<value>&amp;videosize=<value>&amp;resolution=<value>&amp;stretch=<value>] -Click on image</value></value></value></value></value>
(Move the center of image to the coordination (x,y) based on resolution or videosize.)
[ [&speedpan= <value>][&amp;speedtilt=<value>][&amp;speedzoom=<value>][&amp;speedapp=<value>] ] - Set speeds</value></value></value></value>
[&return= <return page="">]</return>

#### Example:

http://myserver/cgi-bin/camctrl/eCamCtrl.cgi?channel=0&stream=0&move=right
http://myserver/cgi-bin/camctrl/eCamCtrl.cgi?channel=0&stream=1&vx=2&vy=2&vz=2
http://myserver/cgi-bin/camctrl/eCamCtrl.cgi?channel=0&stream=1&x=100&y=100&
videosize=640x480&resolution=640x480&stretch=0

In zoom operation, there are two ways to control it, scale zoom and area zoom.

1. [Scale zoom]: contains two control method, relative movement and continuous movement

a. relative movement -

If you trigger a relative movement, it will only zoom certain ratio and stop by itself.

http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zoom=tele

http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zoom=wide

The zoom ratio to move by relative movement is according to the setting of speedzoom [-5~5].

http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&speedzoom=5

b. continuous movement -

If you trigger a continuous movement, you have to handle the stop time by yourself.

A continuous movement is convenient to integrate a joystick control.

http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zooming=tele&zs=1

<u>http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zooming=wide&zs=5</u> zooming is used to indicate the moving direction, and zs is used to indicate the speed. To stop a continuous movement, you have to use the command as below: <u>http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zoom=stop&zs=0</u>

2. [Area zoom]: it means to zoom in on a specific area, here is an example for a directly moving

[x, y] is the desired coordinate, and it will be the center after movement

[w, h] is the scaled area size

[resolution] is the base range of this coordinate system

The example shows [w, h] = [864, 488], which means to zoom in to ratio x2.2 based on [1920x1080].

Pay attention to that [x, y, w, h] are essential parameters in an area zoom case, and the stream index is counted from 0 as the first stream.

http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?channel=0&stream=0&x=912&y=297&w=864&h=488&resolution= 1920x1080

PARAMETER	VALUE	DESCRIPTION
channel	<0~(n-1)>	Channel of video source.
stream	<0~(m-1)>	Stream.
move	home	Move to home ROI.
	up	Move up.
	down	Move down.
	left	Move left.
	right	Move right.
auto	pan	Auto pan.
	patrol	Auto patrol.
	stop	Stop auto pan/patrol.
zoom	wide	Zoom larger view with current speed.
	tele	Zoom further with current speed.
zooming	wide or tele	Zoom without stopping for larger view or further view with zs speed,
		used for joystick control.
zs	0 ~ 6	Set the speed of zooming, "0" means stop.
x	<integer></integer>	The desired coordinate, and it will be the center after movement
у	<integer></integer>	
w	<integer></integer>	The scaled area size
h	<integer></integer>	
resolution	<window size=""></window>	The resolution of streaming.

vx	<integer></integer>	The direction of movement, used for joystick control.
vy	<integer></integer>	
vs	0 ~ 7	Set the speed of movement, "0" means stop.
х	<integer></integer>	x-coordinate clicked by user.
		It will be the x-coordinate of center after movement.
У	<integer></integer>	y-coordinate clicked by user.
		It will be the y-coordinate of center after movement.
videosize	<window size=""></window>	The size of plug-in (ActiveX)window in web page
resolution	<window size=""></window>	The resolution of streaming.
stretch	<boolean></boolean>	0 indicates that it uses <b>resolution</b> (streaming size) as the range of the
		coordinate system.
		1 indicates that it uses <b>videosize</b> (plug-in size) as the range of the
		coordinate system.
speedpan	-5 ~ 5	Set the pan speed.
speedtilt	-5 ~ 5	Set the tilt speed.
speedzoom	-5 ~ 5	Set the zoom speed.
speedapp	1 ~ 5	Set the auto pan/patrol speed.
return	<return page=""></return>	Redirect to the page < return page > after the parameter is assigned.
		The < <i>return page</i> >can be a full URL path or relative path according to
		the current path.

### 8.9 ePTZ Recall (capability.eptz > 0 and capability\_fisheye = 0)

Note: This request requires camctrl privileges.

Method: GET/POST

Syntax:

http://<*servername*>/cgi-bin/camctrl/eRecall.cgi?channel=<value>&stream=<value>&

recall=<value>[&return=<*return page*>]

PARAMETER	VALUE	DESCRIPTION
channel	<0~(n-1)>	Channel of the video source.
stream	<0~(m-1)>	Stream.

recall	Text string less than 40	One of the present positions to recall.
	characters	
return	<return page=""></return>	Redirect to the page < <i>return page</i> >after the parameter is assigned.
		The < <i>return page</i> >can be a full URL path or relative path according to
		the current path.

### 8.10 ePTZ Preset Locations(capability.eptz > 0 and

# capability\_fisheye = 0)

Note: This request requires Operator privileges.

Method: GET/POST

Syntax:

http://<*servername*>/cgi-bin/operator/ePreset.cgi?channel=<value>&stream=<value>

[&addpos=<value>][&delpos=<value>][&return=<return page>]

PARAMETER	VALUE	DESCRIPTION
channel	<0~(n-1)>	Channel of the video source.
stream	<0~(m-1)>	Stream.
addpos	<text less="" string="" than<br="">40 characters&gt;</text>	Add one preset location to the preset list.
delpos	<text less="" string="" than<br="">40 characters&gt;</text>	Delete preset location from the preset list.
return	<return page=""></return>	Redirect to the page < <i>return page</i> >after the parameter is assigned. The < <i>return page</i> >can be a full URL path or relative path according to the current path.

### 8.11 IP Filtering

Note: This request requires Administrator access privileges.

Method: GET/POST

Syntax: <product dependent>

http://<servername>/cgi-bin/admin/ipfilter.cgi?type[=<value>]

http://<*servername*>/cgi-bin/admin/ipfilter.cgi?method=add<v4/v6>&ip=<*ipaddress*>[&index=<value>][&ret urn=<*return page*>]

http://< <i>server</i>	http://< <i>servername</i> >/cgi-bin/admin/ipfilter.cgi?method=del <v4 v6="">&amp;index=<value>[&amp;return=&lt;<i>return page</i>&gt;]</value></v4>		
PARAMETER	VALUE	DESCRIPTION	
type	NULL	Get IP filter type	
	allow, deny	Set IP filter type	
method	addv4	Add IPv4 address into access list.	
	addv6	Add IPv6 address into access list.	
	delv4	Delete IPv4 address from access list.	
	delv6	Delete IPv6 address from access list.	
ip	<ip address=""></ip>	Single address: <ip address=""></ip>	
		Network address: <ip address="" mask="" network=""></ip>	
		Range address: <start -="" address="" end="" ip=""></start>	
index	<value></value>	The start position to add or to delete.	
return	<return page=""></return>	Redirect to the page < <i>return page</i> >after the parameter is assigned.	
		The <i><return i="" page<="">&gt;can be a full URL path or relative path according to</return></i>	
		the current path. If you omit this parameter, it will redirect to an	
		empty page.	

### 8.12 IP Filtering for ONVIF

Syntax:<product dependent>

http://<*servername*>/cgi-bin/admin/ipfilter.cgi?type[=<value>]

http://<*servername*>/cgi-bin/admin/ipfilter.cgi?method=add<v4/v6>&ip=<*ipaddress*>[&index=<value>][&ret urn=<*return page*>]

http://<servername>/cgi-bin/admin/ipfilter.cgi?method=del<v4/v6>&index=<value>[&return=<return page>]

PARAMETER	VALUE	DESCRIPTION
type	NULL	Get IP filter type
	allow, deny	Set IP filter type

method	addv4	Add IPv4 address into access list.
	addv6	Add IPv6 address into access list.
	delv4	Delete IPv4 address from access list.
	delv6	Delete IPv6 address from access list.
ip	<ip address=""></ip>	Single address: <ip address=""></ip>
		Network address: <ip address="" mask="" network=""></ip>
		Range address: <start -="" address="" end="" ip=""></start>
index	<value></value>	The start position to add or to delete.
return	<return page=""></return>	Redirect to the page < <i>return page</i> >after the parameter is assigned.
		The <i><return i="" page<="">&gt;can be a full URL path or relative path according to</return></i>
		the current path. If you omit this parameter, it will redirect to an
		empty page.

### 8.13 UART HTTP Tunnel Channel (capability.nuart > 0)

**Note:** This request requires Operator privileges. **Method:** GET and POST

Syntax:

http://<servername>/cgi-bin/operator/uartchannel.cgi?[channel=<value>] GET /cgi-bin/operator/uartchannel.cgi?[channel=<value>] x-sessioncookie: string[22] accept: application/x-vvtk-tunnelled pragma: no-cache cache-control: no-cache POST /cgi-bin/operator/uartchannel.cgi x-sessioncookie: string[22] content-type: application/x-vvtk-tunnelled pragma : no-cache cache-control : no-cache content-length: 32767 expires: Sun, 9 Jam 1972 00:00:00 GMT

User must use GET and POST to establish two channels for downstream and upstream. The x-sessioncookie in GET and POST should be the same to be recognized as a pair for one session. The contents of upstream should be base64 encoded to be able to pass through a proxy server.

This channel will help to transfer the raw data of UART over the network.

Please see UART tunnel spec for detail information

PARAMETER	VALUE	DESCRIPTION
channel	0 ~ (n-1)	The channel number of UART.

### 8.14 Event/Control HTTP Tunnel Channel (capability.

### evctrlchannel > 0)

**Note:** This request requires Administrator privileges. **Method:** GET and POST

Syntax: http://<servername>/cgi-bin/admin/ctrlevent.cgi -----GET /cgi-bin/admin/ctrlevent.cgi x-sessioncookie: string[22] accept: application/x-vvtk-tunnelled pragma: no-cache cache-control: no-cache -----POST /cgi-bin/admin/ ctrlevent.cgi x-sessioncookie: string[22] content-type: application/x-vvtk-tunnelled pragma : no-cache cache-control : no-cache content-length: 32767 expires: Sun, 9 Jam 1972 00:00:00 GMT

User must use GET and POST to establish two channels for downstream and upstream. The x-sessioncookie in GET and POST should be the same to be recognized as a pair for one session. The contents of upstream should be base64 encoded to be able to pass through the proxy server.

This channel will help perform real-time event subscription and notification as well as camera control more efficiently. The event and control formats are described in another document.

See Event/control tunnel spec for detail information

### 8.15 Get SDP of Streams

**Note:** This request requires Viewer access privileges. **Method:** GET/POST

Syntax:

http://<servername>/<network\_rtsp\_s<0~m-1>\_accessname>

"m" is the stream number.

"network\_accessname\_<0~(m-1)>" is the accessname for stream "1" to stream "m". Please refer to the

"subgroup of network: rtsp" for setting the accessname of SDP.

You can get the SDP by HTTP GET.

When using scalable multicast, Get SDP file which contains the multicast information via HTTP.

### 8.16 Open the Network Stream

Note: This request requires Viewer access privileges.

Syntax:

For HTTP push server (MJPEG):

http://<*servername*>/<network\_http\_s<0~m-1>\_accessname>

For RTSP (MP4), the user needs to input theURL below into an RTSP compatible player.

rtsp://<*servername*>/<network\_rtsp\_s<0~m-1>\_accessname>

"m" is the stream number.

For details on streaming protocol, please refer to the "control signaling" and "data format" documents.

# 8.17 Senddata (capability.nuart > 0)

Note: This request requires Viewer privileges.

Method: GET/POST

Syntax:

http://<*servername*>/cgi-bin/viewer/senddata.cgi? [com=<value>][&data=<value>][&flush=<value>] [&wait=<value>] [&read=<value>]

PARAMETER	VALUE	DESCRIPTION
com	1 ~ <max. com="" port<="" td=""><td>The target COM/RS485 port number.</td></max.>	The target COM/RS485 port number.
	number>	
data	<hex decimal<="" td=""><td>The <hex data="" decimal=""> is a series of digits from 0 <math>\sim</math> 9, A <math>\sim</math> F. Each</hex></td></hex>	The <hex data="" decimal=""> is a series of digits from 0 <math>\sim</math> 9, A <math>\sim</math> F. Each</hex>
	data>[, <hex decimal<="" td=""><td>comma separates the commands by 200 milliseconds.</td></hex>	comma separates the commands by 200 milliseconds.
	data>]	
flush	yes,no	yes: Receive data buffer of the COM port will be cleared before read.
		no: Do not clear the receive data buffer.
wait	1 ~ 65535	Wait time in milliseconds before read data.
read	1 ~ 128	The data length in bytes to read. The read data will be in the return
		page.

Return:

HTTP/1.0 200 OK\r\n

Content-Type: text/plain\r\n

Content-Length: <system information length>\r\n

\r\n

<hex decimal data>\r\n

Where hexadecimal data is digits from 0  $\sim$  9, A  $\sim$  F.

### 8.18 Storage managements (capability.storage.dbenabled > 0)

**Note:** This request requires administrator privileges.

Method: GET and POST

#### Syntax:

http://<*servername*>/cgi-bin/admin/lsctrl.cgi?cmd=<cmd\_type>[&<parameter>=<value>...]

The commands usage and their input arguments are as follows.

PARAMETER	VALUE	DESCRIPTION
cmd_type	<string></string>	Required.
		Command to be executed, including search, insert, delete, update,
		and <i>queryStatus</i> .

#### $Command: \ search$

PARAMETER	VALUE	DESCRIPTION
label	<integer key="" primary=""></integer>	Optional.
		The integer primary key column will automatically be assigned a
		unique integer.
triggerType	<text></text>	Optional.
		Indicate the event trigger type.
		Please embrace your input value with single quotes.
		Ex. mediaType='motion'
		Support trigger types are product dependent.
mediaType	<text></text>	Optional.
		Indicate the file media type.
		Please embrace your input value with single quotes.
		Ex. mediaType='videoclip'
		Support trigger types are product dependent.
destPath	<text></text>	Optional.
		Indicate the file location in camera.
		Please embrace your input value with single quotes.
		Ex. destPath ='/mnt/auto/CF/NCMF/abc.mp4'
resolution	<text></text>	Optional.
		Indicate the media file resolution.
		Please embrace your input value with single quotes.
		Ex. resolution='800x600'
isLocked	<boolean></boolean>	Optional.

	Indicate if the file is locked or not.
	0: file is not locked.
	1: file is locked.
	A locked file would not be removed from UI or cyclic storage.
<text></text>	Optional.
	Indicate the event trigger time. (not the file created time)
	Format is "YYYY-MM-DD HH:MM:SS"
	Please embrace your input value with single quotes.
	Ex. triggerTime='2008-01-01 00:00:00'
	If you want to search for a time period, please apply "TO"
	operation.
	Ex. triggerTime='2008-01-01 00:00:00'+TO+'2008-01-01
	23:59:59' is to search for records from the start of Jan $1^{st}$ 2008to
	the end of Jan 1 <sup>st</sup> 2008.
<positive integer=""></positive>	Optional.
	Limit the maximum number of returned search records.
<positive integer=""></positive>	Optional.
	Specifies how many rows to skip at the beginning of the matched
	records.
	Note that the offset keyword is used after limit keyword.
	<positive integer=""></positive>

To increase the flexibility of search command, you may use "OR" connectors for logical "OR" search operations. Moreover, to search for a specific time period, you can use "TO" connector.

Ex. To search records triggered by motion or di or sequential and also triggered between 2008-01-01 00:00:00 and 2008-01-01 23:59:59.

http://<*servername*>/cgi-bin/admin/lsctrl.cgi?cmd=search&triggerType='motion'+OR+'di'+OR+'seq'&triggerTi me='2008-01-01 00:00:00'+TO+'2008-01-01 23:59:59'

#### Command: **delete**

PARAMETER	VALUE	DESCRIPTION
label	<integer key="" primary=""></integer>	Required.
		Identify the designated record.
		Ex. label=1

Ex. Delete records whose key numbers are 1, 4, and 8.

http://<*servername*>/cgi-bin/admin/lsctrl.cgi?cmd=delete&label=1&label=4&label=8

#### Command: update

PARAMETER	VALUE	DESCRIPTION
label	<integer key="" primary=""></integer>	Required.
		Identify the designated record.
		Ex. label=1
isLocked	<boolean></boolean>	Required.
		Indicate if the file is locked or not.

#### Ex. Update records whose key numbers are 1 and 5 to be locked status.

http://<servername>/cgi-bin/admin/lsctrl.cgi?cmd=update&isLocked=1&label=1&label=5

Ex. Update records whose key numbers are 2 and 3 to be unlocked status.

http://<servername>/cgi-bin/admin/lsctrl.cgi?cmd=update&isLocked=0&label=2&label=3

#### Command: queryStatus

PARAMETER	VALUE	DESCRIPTION
retType	xml or javascript	Optional.
		Ex. retype=javascript
		The default return message is in XML format.

#### Ex. Query local storage status and call for javascript format return message.

http://<*servername*>/cgi-bin/admin/lsctrl.cgi?cmd=queryStatus&retType=javascript

### 8.19 Virtual input (capability.nvi > 0)

**Note:** Change virtual input (manual trigger) status. Method: GET

#### Syntax:

http://<servername>/cgi-bin/admin/setvi.cgi?vi0=<value>[&vi1=<value>][&vi2=<value>] [&return=<return page>]

PARAMETER	VALUE	DESCRIPTION
vi <num></num>	state[(duration)nstate]	Ex: vi0=1
		Setting virtual input 0 to trigger state
	Where "state" is 0, 1. "0"	
	means inactive or normal	Ex: vi0=0(200)1
	state while "1" means	Setting virtual input 0 to normal state, waiting 200
	active or triggered state.	milliseconds, setting it to trigger state.
	Where "nstate" is next	Note that when the virtual input is waiting for next state, it
	state after duration.	cannot accept new requests.
return	<return page=""></return>	Redirect to the page < <i>return page</i> >after the request is
		completely assigned. The < <i>return page</i> >can be a full URL
		path or relative path according the current path. If you omit
		this parameter, it will redirect to an empty page.

Return Code	Description			
200	The request is successfully executed.			
400	The request cannot be assigned, ex. incorrect parameters.			
	Examples:			
	setvi.cgi?vi0=0(10000)1(15000)0(20000)1			
	No multiple duration.			
	setvi.cgi?vi3=0			
	VI index is out of range.			
	setvi.cgi?vi=1			
	No VI index is specified.			
503	The resource is unavailable, ex. Virtual input is waiting for next state.			
	Examples:			
	setvi.cgi?vi0=0(15000)1			
	setvi.cgi?vi0=1			
	Request 2 will not be accepted during the execution time(15 seconds).			

### 8.20 Open Timeshift Stream (capability.timeshift > 0,

### timeshift\_enable=1, timeshift\_c<n>\_s<m>\_allow=1)

Note: This request requires Viewer access privileges.

Syntax:

For HTTP push server (MJPEG):

http://<servername>/<network\_http\_s<m>\_accessname>?maxsft=<value>[&tsmode=<value>&reftime=<v alue>&forcechk&minsft=<value>]

For RTSP (MP4 and H264), the user needs to input theURL below into an RTSP compatible player.

```
rtsp://<servername>/<network_rtsp_s<m>_accessname>?maxsft=<value>[&tsmode=<value>&reftime=<va
lue>&forcechk&minsft=<value>]
```

"n" is the channel index.

"m" is the timeshift stream index.

For details on timeshift stream, please refer to the "TimeshiftCaching" documents.

PARAMETER	VALUE	DEFAULT	DESCRIPTION
maxsft	<positive< td=""><td>0</td><td>Request cached stream at most how many seconds ago.</td></positive<>	0	Request cached stream at most how many seconds ago.
	integer>		
tsmode	normal,	normal	Streaming mode:
	adaptive		normal $=>$ Full FPS all the time.
			adaptive => Default send only I-frame for MP4 and H.264, and
			send 1 FPS for MJPEG. If DI or motion window are triggered, the
			streaming is changed to send full FPS for 10 seconds.
			(*Note: this parameter also works on non-timeshift streams.)
reftime	mm:ss	The time	Reference time for maxsft and minsft.
		camera receives	(This provides more precise time control to eliminate the
		the request.	inaccuracy due to network latency.)
			Ex: Request the streaming from 12:20
			rtsp://10.0.0.1/live.sdp?maxsft=10&reftime=12:30
forcechk	N/A	N/A	Check if the requested stream enables timeshift, feature and
			if minsft is achievable.
			If false, return "415 Unsupported Media Type".
minsft	<positive< td=""><td>0</td><td>How many seconds of cached stream client can accept at least.</td></positive<>	0	How many seconds of cached stream client can accept at least.
	integer>		(Used by forcechk)

Return Code	Description
400 Bad Request	Request is rejected because some parameter values are illegal.
415 Unsupported Media Type	Returned, if forcechk appears, when minsft is not achievable or the timeshift
	feature of the target stream is not enabled.

# 8.21 Remote Focus

Note: This request requires Administrator privileges.

Method: GET/POST

Syntax:

http://<*servername*>/cgi-bin/admin/remotefocus.cgi?function=<value>[&direction=<value>] [&position=<value>][&steps=<value>][&iris]

PARAMETER	VALUE	DESCRIPTION
function	focus,	Function type
	auto,	focus – Move focus motor
	scan,	auto – Perform auto focus
	stop,	scan – Perform focus scan
	positioning,	stop – Stop current operation
	irisopen,	positioning – Position the motors
	irisenable,	irisopen – Open iris. It will maintain this status until sending irisenable
	resetfocus,	cgi.
	getstatus	irisenable – Not open iris
		resetfocus - reset focus motor to default valuegetstatus-Information
		of motors, return value as below:
		remote_focus_focus_motor_max: Maximum steps of focus motor
		remote_focus_focus_motor_start: Start point of effective focal length
		remote_focus_focus_motor_end: End point of effective focal length
		remote_focus_focus_motor: Current position of focus motor
		remote_focus_focus_enable: Current function of focus motor
		remote_focus_value_mode: Source of focus value. 0: ISP, 1: Edge.
		remote_focus_iris_open: The current status of iris. 0: irisenable, 1:
		irisopen
direction	direct,	Motor's moving direction.
	forward,	It works only if function= focus.
	backward	

position	0~ <motor_max></motor_max>	Motor's position.	
		It works only if function=zoom   focus and direction=direct.	
		<motor_max> is refer to remote_focus_focus_motor_max which</motor_max>	
		replied from "function=getstatus"	
steps	1 ~ <motor_max></motor_max>	Motor's moving steps.	
		It works only if function= focus and direction=forward   backward.	
		<motor_max> is refer to remote_focus_focus_motor_max which</motor_max>	
		replied from "function=getstatus"	
iris	N/A	Open iris or not.	
		It works only if function=auto   scan.	

# 8.22 Export Files

Note: This request requires Administrator privileges.

Method: GET

Syntax:

For daylight saving time configuration file:

http://<servername>/cgi-bin/admin/exportDst.cgi

For language file:

http://<servername>/cgi-bin/admin/export\_language.cgi?currentlanguage=<value>

PARAMETER	VALUE	DESCRIPTION	
currentlanguage	0~20	Available language lists.	
		Please refer to:	
		system_info_language_i0 ~ system_info_language_i19.	

For setting backup file:

http://<servername>/cgi-bin/admin/export\_backup.cgi?backup

### 8.23 Upload Files

Note: This request requires Administrator privileges.

Method: POST

Syntax:

For daylight saving time configuration file:

http://<*servername*>/cgi-bin/admin/upload\_dst.cgi

Post data:

filename =<file name>\r\n

\r\n

<multipart encoded form data>

For language file:

http://<servername>/cgi-bin/admin/upload\_lan.cgi

Post data:

filename =<file name>\r\n \r\n

<multipart encoded form data>

#### For setting backup file:

http://<servername>/cgi-bin/admin/upload\_backup.cgi

Post data:

filename =<file name>\r\n \r\n <multipart encoded form data>

Server will accept the file named <file name> to upload this one to camera.

# 8.24 Update Lens Configuration

**Note:** This request requires Administrator privileges. **Method:** GET

Syntax:

For list all names of lens installed in camera:

http://<*servername*>/cgi-bin/admin/update\_lens.cgi?list\_lens

For choose selected lens configuration:

http://<servername>/cgi-bin/admin/update\_lens.cgi?choose\_lens=<value>

For delete selected lens configuration:

http://<servername>/cgi-bin/admin/update\_lens.cgi?delete\_lens=<value>

PARAMETER	VALUE	DESCRIPTION	
value	<string></string>	Available lens name.	
		Please refer to:	
		lens_default_i<0~(n-1)>_name	
		lens_user_i<0~(n-1)>_name	
		n is a positive integer.	

#### Method: POST

Syntax:

For upload user-defined lens configuration:

http://<servername>/cgi-bin/admin/update\_lens.cgi?upload\_lens

#### Post data:

upload\_lens\_profile\_input = <file name>\r\n \r\n <multipart encoded form data>

Server will accept the file named <file name> to upload the lens profile to camera.

# 8.25 Media on demand (capability.localstorage.modnum > 0)

Media on demand allows users to select and receive/watch/listen to metadata/video/audio contents on demand. **Note:** This request requires Viewer access privileges.

Syntax:

rtsp://<servername>/mod.sdp?[&stime=<value>][&etime=<value>][&length =<value>][&loctime =<value>][&file=<value>][&tsmode=<value>]

PARAMETER	VALUE	DEFAULT	DESCRIPTION
stime	<yyyymmdd_hhmmss.mmm></yyyymmdd_hhmmss.mmm>	N/A	Start time.
etime	<yyyymmdd_hhmmss.mmm></yyyymmdd_hhmmss.mmm>	N/A	End time.
length	<positive integer=""></positive>	N/A	The length of media of interest.
			The unit is second.
loctime	<boolean></boolean>	0	Specify if start/end time is local time format.
			1 for local time, 0 for UTC+0
file	<string></string>	N/A	The media file to be played.
tsmode	<positive integer=""></positive>	N/A	Timeshift mode, the unit is second.

Ex.

stime	etime	length	file	Description
v	v	X	X Play recordings between stime and etime	
				rtsp://10.10.1.2/mod.sdp?stime=20110312_040400.000&etime=2
				011_0312_040510.000
v	x	ν	X	Play recordings for length seconds which start from stime
				rtsp://10.10.1.2/mod.sdp?stime=20110312_040400.000&length=
				120
x	v	ν	х	Play recordings for length seconds which ends at etime
				rtsp://10.10.1.2/mod.sdp?etime=20110312_040400.000&length=
				120
x	x	X	V	Play file file
				<pre>rtsp://10.10.1.2/mod.sdp?filename=/mnt/link0/</pre>

# 8.26 Fisheye local dewarp camera control (capability.fisheye > 0

### and capability.fisheyelocaldewarp.c0 > 0, only support in 1R

### mode)

**Note:** This request requires camctrl privileges. **Method:** GET/POST

Syntax:

http://<servername>/cgi-bin/camctrl/fdCamCtrl.cgi?channel=<value>&stream=<value>
[&move=<value>] - Move home, up, down, left, right
[&zoom=<value>] - Zoom wide, tele
[[&speedpan=<value>][&speedtilt=<value>][&speedzoom=<value>]] - Set speeds
[&zooming=<value>&zs=<value>] - Zoom without stopping, used for joystick
[&vx=<value>&vy=<value>&vs=<value>] - Shift without stopping, used for joystick
[&x=<value>&y=<value>&videosize=<value>&resolution=<value>&stretch=<value>] - Click on image (Move
the center of image to the coordination (x,y) based on resolution or videosize of 10 mode.)
[&return=<return page>]

#### Example:

http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&move=right http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&move=top&speedtilt=-1 http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&move=top&speedtilt=-1 http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&zooming=tele&zs=2 http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&vx=5&vy=3&vs=2 http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&x=700&y=700&videosize=1920x1920&r esolution=1920x1920&stretch=1

PARAMETER	VALUE	DESCRIPTION	
channel	<0~(n-1)>	Channel of video source.	
stream	<0~(m-1)>	Stream.	
move	home	Move to home position.	
	ир	Move up.	
down left		Move down.	
		Move left.	
	right	Move right.	

zoom	wide	Zoom larger view with current speed.	
	tele	Zoom further with current speed.	
speedpan	-5 ~ 5	Set the pan speed of current command.	
speedtilt	-5 ~ 5	Set the tilt speed of current command.	
speedzoom	-5 ~ 5	Set the zoom speed of current command.	
zooming	wide or tele	Zoom without stopping for larger view or further view with zs speed, used for joystick control.	
zs	0 ~ 6	Set the speed of zooming, "0" means stop.	
vx	-6 ~ 6	The direction of movement, used for joystick control.	
vy	-6 ~ 6		
vs	0 ~ 7	Set the speed of movement, "0" means stop.	
х	<integer></integer>	x-coordinate clicked by user.	
		It will be the x-coordinate of center after movement.	
У	<integer></integer>	y-coordinate clicked by user.	
		It will be the y-coordinate of center after movement.	
videosize	<window size=""></window>	The size of plug-in (ActiveX) window in web page of 10 content.	
resolution	<window size=""></window>	The resolution of streaming of 10 content.	
stretch	<boolean></boolean>	0 indicates that it uses <b>resolution</b> (streaming size) as the range of	
		the coordinate system.	
		1 indicates that it uses <b>videosize</b> (plug-in size) as the range of the	
		coordinate system.	
return	<return page=""></return>	Redirect to the page < return page > after the parameter is assigned.	
The <i><return page=""></return></i> can be a full URL path or relati		The <i><return page=""></return></i> can be a full URL path or relative path according to	
		the current path. If you omit this parameter, it will redirect to an	
		empty page.	

### 8.27 3D Privacy Mask

# (capability\_image\_c<0~(n-1)>\_privacymask\_wintype =

### **3Drectangle)** n denotes the value of "capability\_nvideoin"

**Note:** This request requires admin user privilege **Method:** GET/POST

Syntax:

http://<*servername*>/cgi-bin/admin/setpm3d.cgi?method=<value>&name=<value>&[maskheight=<value>& maskwidth=<value>&videosize=<value>&return page>]

PARAMETER	VALUE	DESCRIPTION
method	add	Add a 3D privacy mask at current location
	delete	Delete a 3D privacy mask
	edit	Edit a 3D privacy mask
maskname	string[40]	3D privacy mask name
maskheight	integer	3D privacy mask height
maskwidth	integer	3D privacy mask width
videosize	<window size=""></window>	Optimal.
		The size of plug-in (ActiveX) window in web page is the size of the
		privacy window size. This field is not necessary, it will use the default
		value if not specified. 320x180 for 16:9 resolution and 320x240 for
		4:3 resolution.
return	<return page=""></return>	Redirect to page < <i>return page</i> > after the 3D privacy mask is
configured. The <i><return page=""></return></i> can be a full URL		configured. The <i><return page=""></return></i> can be a full URL path or relative path
		according to the current path. If you omit this parameter, it will
		redirect to an empty page.

# 8.28 Camera Control (capability.ptzenabled > 0)

**Note:** This request requires Viewer privileges. **Method:** GET/POST

Syntax:
http://< <i>servername</i> >/cgi-bin/camctrl/camctrl.cgi?[channel= <value>][&amp;camid=<value>]</value></value>
[&move= <value>] - Move home, up, down, left, right</value>
[&focus= <value>] - Focus operation</value>
[&auto= <value>] - Auto pan, patrol</value>
[&zoom= <value>] - Zoom in, out</value>
[&zooming= <value>&amp;zs=<value>] - Zoom without stopping, used for joystick</value></value>
[&vx= <value>&amp;vy=<value>&amp;vs=<value>] - Shift without stopping, used for joystick</value></value></value>
[&x= <value>&amp;y=<value>&amp;videosize=<value>&amp;resolution=<value>&amp;stretch=<value>] - Click on image</value></value></value></value></value>
(Move the center of image to the coordination (x,y) based on resolution or videosize.)
[ [&speedpan= <value>][&amp;speedtilt=<value>][&amp;speedzoom=<value>][&amp;speedapp=<value>][&amp;speedlink=<val< td=""></val<></value></value></value></value>
ue>]] – Set speeds
[&return= <return page="">]</return>

Example:

http://myserver/cgi-bin/camctrl/camctrl.cgi?channel=0&camid=1&move=right http://myserver/cgi-bin/camctrl/camctrl.cgi?channel=0&camid=1&zoom=tele http://myserver/cgi-bin/camctrl/camctrl.cgi?channel=0&camid=1&x=300&y=200&resolution=704x480&videosi ze=704x480&strech=1

PARAMETER	VALUE	DESCRIPTION	
channel	<0~(n-1)>	Channel of video source.	
camid	0, <positive integer=""></positive>	Camera ID.	
move home Move to camera to home position.		Move to camera to home position.	
	ир	Move camera up.	
	down	Move camera down.	
	left	Move camera left.	
	right	Move camera right.	
speedpan	-5 ~ 5	Set the pan speed.	
speedtilt	-5 ~ 5	Set the tilt speed.	
speedzoom	-5 ~ 5	Set the zoom speed.	
speedfocus	-5 ~ 5	Set the focus speed.	

speedapp	-5 ~ 5	Set the auto pan/patrol speed.	
auto	pan	Auto pan.	
	patrol	Auto patrol.	
	stop	Stop camera.	
zoom	wide	Zoom larger view with current speed.	
	tele	Zoom further with current speed.	
	stop	Stop zoom.	
zooming	wide or tele	Zoom without stopping for larger view or further view with zs speed, used for joystick control.	
zs	0~8 <sd8362></sd8362>	Set the speed of zooming, "0" means stop.	
vx	<integer ,="" 0="" excluding=""></integer>	The slope of movement = $vy/vx$ , used for joystick control.	
vy	<integer></integer>		
vs	0 ~ 127	Set the speed of movement, "0" means stop.	
x	<integer></integer>	x-coordinate clicked by user.	
		It will be the x-coordinate of center after movement.	
у	<integer></integer>	y-coordinate clicked by user.	
		It will be the y-coordinate of center after movement.	
videosize	<window size=""></window>	The size of plug-in (ActiveX) window in web page	
resolution	<window size=""></window>	The resolution of streaming.	
stretch	<boolean></boolean>	0 indicates that it uses <b>resolution</b> (streaming size) as the range of	
		the coordinate system.	
		1 indicates that it uses <b>videosize</b> (plug-in size) as the range of the	
		coordinate system.	
focus	auto	Auto focus.	
	far	Focus on further distance.	
	near	Focus on closer distance.	
return	<return page=""></return>	Redirect to the page < <i>return page</i> > after the parameter is assigned.	
		The <i><return page=""></return></i> can be a full URL path or relative path according to	
		the current path. If you omit this parameter, it will redirect to an	
		empty page.	

# 8.29 Recall (capability.ptzenabled > 0)

**Note:** This request requires Viewer privileges.

#### Method: GET

Syntax:

http://< <i>servername</i> >/cgi-bin/viewer/recall.cgi?
recall= <value>[&amp;channel=<value>][&amp;return=&lt;<i>return page</i>&gt;]</value></value>

PARAMETER	VALUE	DESCRIPTION
recall	string[30]	One of the present positions to recall.
channel	0~(capability_nvideoin-1)	Channel of the video source.
return	<return page=""></return>	Redirect to the page <i><return page=""></return></i> after the parameter is assigned.
		The <i><return page=""></return></i> can be a full URL path or relative path according
		to the current path. If you omit this parameter, it will redirect to an
		empty page.

### 8.30 Preset Locations (capability.ptzenabled > 0)

Note: This request requires Operator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/operator/preset.cgi?[channel=<value>]
[&addpos=<value>][&delpos=<value>][&return=<return page>]
```

PARAMETER	VALUE	DESCRIPTION	
addpos	string[30]	Add one preset location to the preset list.	
channel	0~(capability_nvideoin-1)	Channel of the video source.	
delpos	string[30]	Delete preset location from preset list.	
return	<return page=""></return>	Redirect to the page <i><return page=""></return></i> after the parameter is assigned.	

	The <i><return page=""></return></i> can be a full URL path or relative path according	
	to the current path. If you omit this parameter, it will redirect to an	
	empty page.	

<End of document>

### **Technical Specifications**

	FD836B-HTV: Vari-focal, P-iris, Remote Focus	Alarm and Event	
Model	FD836B-EHTV: Vari-focal, P-iris, Remote Focus, Extreme Weather FD836B-HVF2: Fixed-focal FD836B-EHVF2: Fixed-focal, Extreme Weather	Alarm Triggers	Video motion detection, manual trigger, digital input, periodica trigger, system boot, recording notification, camera tampering detection, audio detection
System Information			Event notification using digital output, HTTP, SMTP, FTP and NA
CPU	Multimedia SoC (System-on-Chip)	Alarm Events	server, SD Card File upload via HTTP, SMTP, FTP, NAS server and SD card
Flash	1Gb	General	The upload via TTTT, SWIT, TT, WAS server and SD card
RAM	2Gb	Smart Focus System	FD836B-HTV/FD836B-EHTV: Remote Focus
Camera Features		Smart rocus system	RI-45 cable connector for Network/PoE connection
Image Sensor	1/2.8" Progressive CMOS		Audio input
Maximum Resolution	1920×1080 (2MP)	Connectors	Audio output DC 12V power input
Lens Type	FD836B-HTV/FD836B-EHTV: Vari-focal FD836B-HVF2/FD836B-EHVF2: Fixed-focal		Digital input*1 Digital output*1
Focal Length	FD836B-HTV/FD836B-EHTV: f = 2.8 ~ 12 mm FD836B-HVF2/FD836B-EHVF2: f = 2.8 mm	LED Indicator	System power and status indicator
Aperture	FD836B-HTV/FD836B-EHTV: F1.8 ~ F2.85 FD836B-HVF2/FD836B-EHVF2: F2.1	Power Input	IEEE 802.3at PoE FD836B-HTV:
Auto-iris	P-iris (FD836B-HTV/FD836B-EHTV)		Max. 11.5 W (DC 12V)
Field of View	FD836B-HTV/FD836B-EHTV: 42~ 104 (Horizontal) 24~ 711 (Vertical) 49~ 111 (Diagonal) FD836B-HVF2/FD836B-EHVF2: 83 (Horizontal) 53 (Vertical) 91 (Diagonal)	Power Consumption	Max. 13 W (PoE) FD3368-HVF2: Max. 75 W (PoE) FD3368-EHTV: Max. 25/13 W (PoE-Heater on/off) Max. 25/13 W (PoE-Heater on/off) FD3368-FHVF2:
Shutter Time	1/5 sec. to 1/32,000 sec.		Max. 21/7.5 W (DC 12V-Heater on/off) Max. 25/9 W (PoE-Heater on/off)
WDR Technology	WDR	Dimensions	Ø 155 x 103 mm
Day/Night	Removable IR-cut filter for day & night function	Weight	920 g
	FD836B-HTV/FD836B-EHTV: 0.03 Lux @ F1.8 (Color) 0.001 Lux @ F1.8 (B/W)	Casing	Weather-proof IP66-rated housing Vandal-proof IK10-rated metal housing
Minimum Illumination	FD836B-HVF2/FD836B-EHVF2: 0.06 Lux @ F2.1 (Color)	Safety Certifications	FD836B-HTV/-EHTV: CE, LVD, FCC Class A, VCCI, C-Tick, UL FD836B-HVF2/-EVF2: CE, LVD, FCC Class A, VCCI, C-Tick
Pan/tilt/zoom Functionalities	0.001 Lux @ F2.1 (B/W) ePTZ: 48x digital zoom (4x on IE plug-in, 12x built in) Built-in IR illuminators, effective up to 30 meters	Operating Temperature	FD3368-HVF2/FD3368-HTV: Starting Temperature: -10°C ~ 50°C (14°F122°F) Working Temperature: -20°C ~ 50°C (-4°F122°F) FD3368-EHVF2/FD3368-EHTV: Starting Temperature: -40°C ~ 50°C (-40°F ~ 122°F)
IR Illuminators	with Smart IR IR LED*8		Working Temperature: -50°C ~ 50°C (-58°F ~ 122°F) 36 months (FD836B-HTV/FD836B-EHTV)
On-board Storage	MicroSD/SDHC/SDXC card slot	Warranty	24 months (FD836B-HVF2/FD836B-EHVF2)
Video		System Requirements	
Compression	H.264 & MJPEG	Operating System	Microsoft Windows 7/8/Vista/XP/2000
Maximum Frame Rate	30 fps @ 1920x1080 In both compression modes	Web Browser	Mozilla Firefox 7~10 (streaming only) Internet Explorer 7/8/9/10/11
Maximum Streams	4 simultaneous streams	Other Players	VLC: 1.1.11 or above
S/N Ratio	58dB		Quicktime: 7 or above
Dynamic Range	100dB	Included Accessories	
Video Streaming	Adjustable resolution, quality and bitrate	CD	User's manual, quick installation guide, Installation Wizard 2, ST7501 32-channel recording software
Image Settings	Adjustable image size, quality and bit rate, Time stamp, text overlay, flip & mirror, Configurable brightness, contrast, saturation, sharpness, white balance, exposure control, gain, backlight compensation, privacy masks, Scheduled profile settings, Seamless recording, smart stream, 3D Noise Reduction, Video Rotation, Defog	Others	Quick installation guide, warranty card, alignment sticker/ desiccant bag, screw pack
Audio	· •	Dimensions	
Audio Capability	Two-way Audio (full duplex)	Brinensions	
Compression	G.711, G.726		
Interface	External microphone input External line output		
Network		Ø1	155 mm
Users	Live viewing for up to 10 clients		
Protocols	IPv4, IPv6, TCP/IP, HTTP, HTTPS, UPnP, RTSP/RTP/RTCP, IGMP, SMTP, FTP, DHCP, NTP, DNS, DDNS, PPP0E, CoS, QoS, SNMP, 802.1X, UDP, ICMP, ARP, SSL, TLS		
Interface	10 Base-T/100 BaseTX Ethernet (RJ-45) *It is highly recommended to use standard CAT5e & CAT6 cables which are compliant with the 3P/ETL standard.		
ONVIF	Supported, specification available at www.onvif.org		
Intelligent Video			
Video Motion Detection	Five-window video motion detection		<b>.</b>
VCA*	Line crossing detection, field detection, loitering detection

ens Type	FD8382-TV/FD8382-ETV: Vari-focal		Digital output*1	
	FD8382-VF2/FD8382-EVF2: Fixed-focal	LED Indicator	System power and status indicator	
ocal Length	FD8382-TV/FD8382-ETV: f = 3 ~ 9 mm FD8382-VF2/FD8382-EVF2: f = 2.8 mm	Power Input	DC 12V	
	FD8382-TV/FD8382-ETV: F1.2 ~ F16		IEEE 802.3at PoE	
Aperture	FD8382-VF2/FD8382-EVF2: F2.1		FD8382-TV: Max. 8 W (DC 12V)	
Auto-iris	P-iris (FD8382-TV/FD8382-ETV)		Max. 9.5 W (PoE)	
	FD8382-TV/FD8382-ETV:		FD8382-ETV:	
	35' ~ 78' (Horizontal) 27' ~ 54' (Vertical)		Max. 21/8 W (DC 12V-Heater on/off) Max. 25/9.5 W (PoE-Heater on/off)	
	27" ~ 54" (Vertical) 44" ~ 101" (Diagonal)	Power Consumption	FD8382-VF2: Max. 7.5 W (DC 12V)	
Field of View	FD8382-VF2/FD8382-EVF2:		Max. 7.5 W (DC 12V) Max. 9 W (PoE)	
	90° (Horizontal)		FD8382-EVF2:	
	67° (Vertical) 118° (Diagonal)		Max. 21/7.5 W (DC 12V-Heater on/off)	
hutter Time	1/5 sec. to 1/32,000 sec.		Max. 25/9 W (PoE-Heater on/off)	
VDR Technology	WDR Enhanced	Dimensions	Ø 155 x 103 mm	
Day/Night	Removable IR-cut filter for day & night function	Weight	920 g	
Jay/Night	FD8382-TV/FD8382-ETV:	Casing	Weather-proof IP66-rated housing	
	FD8382-I V/FD8382-EI V: 0.04 Lux @ F1.2 (Color)		Vandal-proof IK10-rated metal housing	
Minimum Illumination	0.001 Lux @ F1.2 (B/W)		FD8382-TV/FD8382-ETV: CE_LVD_ECC_Class A_VCCL_C-Tick_LII	
	FD8382-VF2/FD8382-EVF2: 0.39 Lux @ F2.1 (Color)	Safety Certifications	CE, LVD, FCC Class A, VCCI, C-Tick, UL FD8382-VF2/FD8382-EVF2:	
	0.001 Lux @ F2.1 (B/W)		CE, LVD, FCC Class A, VCCI, C-Tick	
an/tilt/zoom	ePTZ:		FD8382-VF2/FD8382-TV:	
unctionalities	48x digital zoom (4x on IE plug-in, 12x built in)		Starting Temperature: -10°C ~ 50°C (14°F~ 122°F) Working Temperature: -20°C ~ 50°C (-4°F~ 122°F)	
	Built-in IR illuminators, effective up to 30 meters	Operating Temperature	FD8382-EVF2/FD8382-ETV:	
R Illuminators	with Smart IR IR LED*8		Starting Temperature: -40°C ~ 50°C (-40°F ~ 122°F) Working Temperature: -50°C ~ 50°C (-58°F ~ 122°F)	
On-board Storage	MicroSD/SDHC/SDXC card slot	Warranty	36 months (FD8382-TV/FD8382-ETV)	
Video		,	24 months (FD8382-VF2/FD8382-EVF2)	
Compression	H.264 & MJPEG	System Requirements		
Maximum Frame Rate	30 fps @ 1920x1080	Operating System	Microsoft Windows 7/8/Vista/XP/2000	
	In both compression modes	Web Browser	Mozilla Firefox 7~10 (streaming only) Internet Explorer 7/8/9/10/11	
Maximum Streams	4 simultaneous streams		VLC: 1.1.11 or above	
5/N Ratio	67dB	Other Players	Quicktime: 7 or above	
Dynamic Range	70dB	Included Accessories		
/ideo Streaming	Adjustable resolution, quality and bitrate		User's manual, quick installation guide, Installation Wizard 2,	
	Adjustable image size, quality and bit rate, Time stamp, text	CD	ST7501 32-channel recording software	
mage Settings	overlay, flip & mirror, Configurable brightness, contrast, saturation, sharpness, white balance, exposure control, gain, backlight compensation, privacy masks, Scheduled profile settings, seamless recording, smart stream, 3D Noise Reduction, Video Rotation, Defog	Others	Quick installation guide, warranty card, alignment sticker/ desiccant bag, screw pack	
Audio				
Audio Capability	Two-way Audio (full duplex)	Dimensions		
Compression	G.711, G.726			
	External microphone input			
nterface	External line output			
Vetwork		Ø1	55 mm	
Jsers	Live viewing for up to 10 clients			
Protocols	IPv4, IPv6, TCP/IP, HTTP, HTTPS, UPnP, RTSP/RTP/RTCP, IGMP, SMTP, FTP, DHCP, NTP, DNS, DDNS, PPPoE, CoS, OOS, SNMP,			
nterface	802.1X, UDP, ICMP, ARP, SSL, TLS 10 Base-T/100 BaseTX Ethernet (RI-45) *It is highly recommended to use standard CAT5e & CAT6 cables			
DNVIF	which are compliant with the 3P/ETL standard. Supported, specification available at www.onvif.org			
ntelligent Video	Supported, specification available at www.onvii.org			
	The mindemuidee metion determine			
/ideo Motion Detection /CA*	Five-window video motion detection			
	Line crossing detection, field detection, loitering detection			
Alarm and Event				
vailable per project request				
Compatible Accesso				

AM-215 (v02) L Shape Bracket

AM-517 (v03) Adapter Ring

AM-713 Conduit Box

### **Electromagnetic Compatibility (EMC)**

### **FCC Statement**

This device compiles with FCC Rules Part 15. Operation is subject to the following two conditions.

- This device may not cause harmful interference, and
- This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a partial installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Shielded interface cables must be used in order to comply with emission limits.

#### **CE Mark Warning**

This is a Class B product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

### **VCCI Warning**

この装置は、情報処理装置等電波障害自主規制協議会(VCCI)の基準にづくクラスB情報技術装置 です。この装置は、家庭環境で使用することを目的としていますが、この装置がラジオやテレビジョン 受信機に近接して使用されると、受信障害を引き起こすことがあります。

取扱説明書に従って正しい取り扱いをして下さい

### Liability
