

EXFO's best-in-class 100G Ethernet testing suite is available from OSA today... **but built for tomorrow.**

Versatile testing on a single module: 10M to 100G (including 25G), fibre channel, latency measurements and multiple services validation

Intuitive GUI with easy-to-use standards-based Ethernet testing (EtherSAM Y.1564, RFC 2544)

Industry best-practice EtherBERT to ensure error-free transmission

Ethernet and transport protocol testing for various industries

Layer 4 TCP throughput testing with RFC 6349*

Troubleshooting tools:

- Traffic generation and monitoring (monitor SLAs for up to 16 streams)
- Through mode (in-line testing of live traffic)

Smart loopback functionality enables layer 2/3/4 loopback for round-trip testing

Service-level-agreement and Ethernet OAM compliance testing

* Requires a second FTB-1v2 platform—subject to availability

Smarter
network
in sight.
