COMPLETE SOLUTION

RMS

The **Remote Management System** (RMS) by Teltonika Networks allows you to be in control of your complete IoT solution from anywhere in the world. RMS offers remote access to all of your devices from a single user-friendly platform. We tailored RMS to meet the requirements of various client profiles and designed three available RMS plans.

REMOTE MANAGEMENT SYSTEM

MANAGEMENT

RMS MANAGEMENT gives you full control over your fleet of Teltonika Networks routers and gateways, ensuring their security and availability. RMS offers many features to save your time and expenses while managing everything remotely – even without a public IP!

- USER FRIENDLY INTERFACE
- LOCATION HISTORY & POSITIONING
- HISTORICAL DATA AND REPORTS
- MULTI-CONFIGURATION & FOTA
- CUSTOMIZABLE ALERTS AND NOTIFICATIONS
- HOTSPOT MANAGEMENT SERVICE

CONNECT

RMS CONNECT is a unified access system, which allows you to reach and control smart devices remotely via RMS. If your PLC, Industrial PC, CCTV camera, Point of Sale system or other intelligent device is reachable by one of RMS compatible routers or gateways, you can access it with RMS CONNECT without a public IP or additional VPN services!

// HTTP/HTTPS protocol compatibility allows for easy access of Web User Interface of other devices

// SSH enables you to reach Command Line Interface of end devices via SSH tunnels

// Remote Desktop functionality enables you to gain full control of any equipment running Windows, Linux or Android that support RDP/VNC protocols

API

What could be more efficient than having a single software system for your whole connected solution infrastructure? With our RMS API you can get just that! RMS API allows your IoT Platform to directly interact with RMS and get the exact data and functionality you need. Just like with other RMS services we want to give you full control of your solution and RMS API brings that to another level!

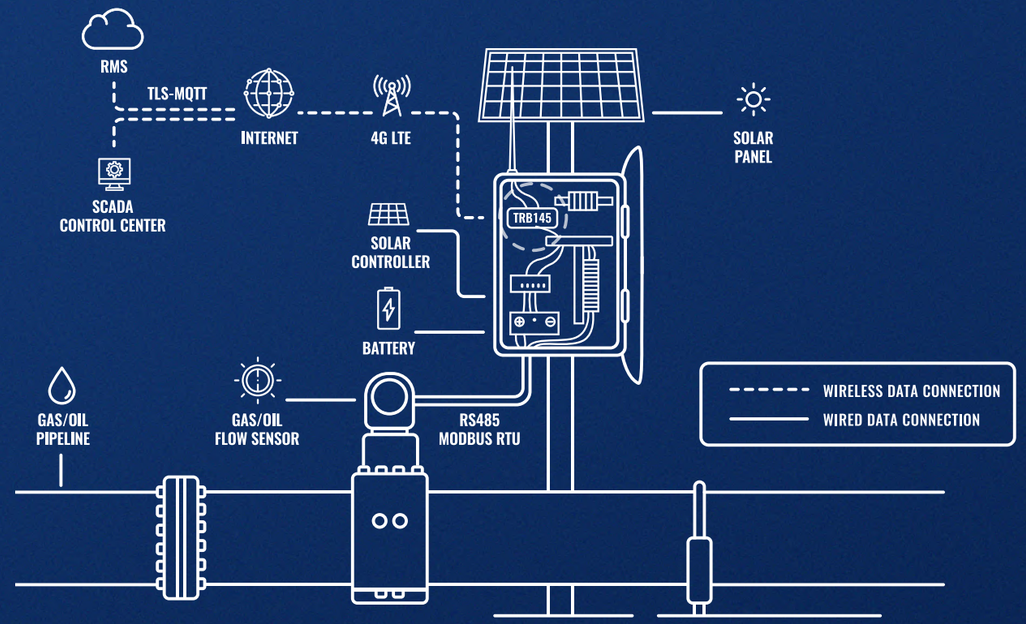
REMOTE MONITORING OF OIL & GAS PIPELINES

ENERGY & UTILITIES

Our lives depend on energy. While many countries are working towards a more sustainable future with development focused on renewable energy, oil and gas remain the most popular energy sources. It accounts for more than 60% of the global energy consumption, as per BP estimates.

SOLUTION
While satellite communications are still expensive, global expansion of 4G LTE coverage enables Oil and Gas companies to implement a wide pipeline flow monitoring network by using dedicated flow meters, which output data using industrial protocols.
In many cases – serial communication travels via RS-485 and uses Modbus industrial protocol. The data generated by the flow meter is forwarded to control centers and SCADA systems for aggregation and central interpretation. TRB145 Serial IoT Gateway by Teltonika Networks is perfect for such applications. RS-485 interface, Modbus RTU Master functionality, and 4G LTE Cat1 enables to periodically read flow meter information and send gathered data to remote HTTP/HTTPS servers or various IoT platforms using MQTT. The wide power supply range and low energy consumption allow TRB145 to power up by combining solar power and batteries.

BENEFITS
/Low-cost and quick to deploy – multiple TRBs can be simultaneously configured immediately using Teltonika Remote Management System (RMS).
/High availability and low data cost – 4G LTE is highly available globally and cost-efficient due to low amounts of data required for this application.
/Data security – TRB145 supports advanced data protection with embedded Firewall and encryption with multiple VPN services, such as OpenVPN, IPsec, PPTP, L2TP, and others.
/Immediate notifications – if preset flow values fall out of defined criteria, system operators can setup TRB145 to receive immediate alarms.



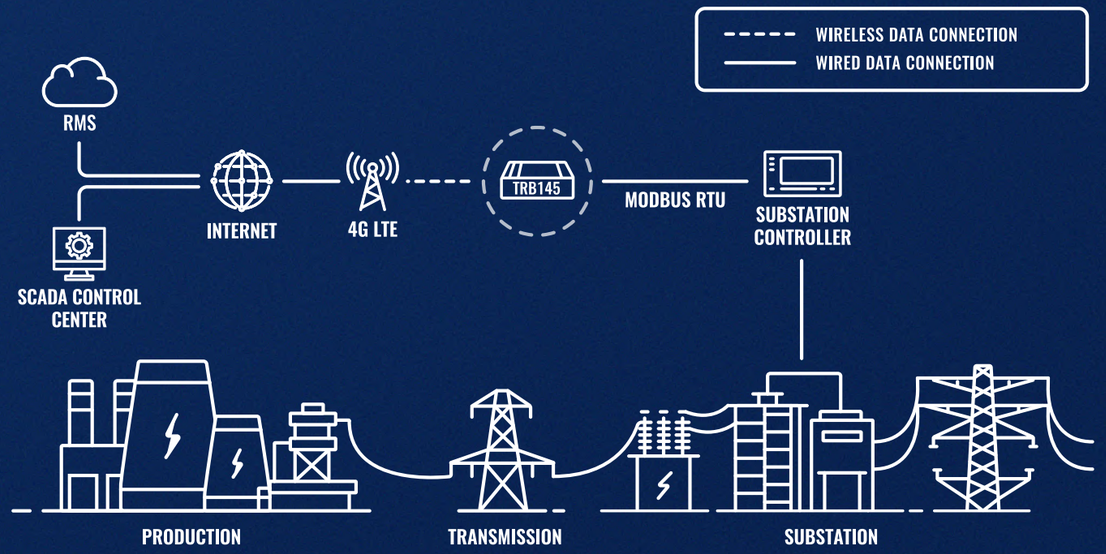
SMART GRID & SUBSTATION COMMUNICATION

ENERGY & UTILITIES

The energy market is one of the most crucial industry sectors enabling our everyday lives. It requires constant development and innovation. The Industrial Internet of Things is a movement towards more connectivity and control in every aspect of industry digitization, and the energy sector is no exception.

SOLUTION
Integrators and energy operators worldwide have recognized that cellular solutions, such as 4G LTE enabled gateways and routers, offer the most reliable connectivity and best availability for their complex substation systems. In many cases, substation controllers aren't new, meaning that they use serial interfaces for communication, such as RS232. TRB142 is a 4G LTE Cat1 enabled cellular gateway by Teltonika Networks able to connect legacy equipment via serial RS232 and manage connectivity with numerous industrial and networking protocols, like Modbus RTU & MQTT. It also has advanced firmware security functions, including a firewall and multiple supported VPN services. Moreover, TRB142 can diagnose any connectivity and functionality issues and reboot separate modules of the gateway to restore service automatically without any interference from the operators. Finally, all TRB142 devices can be easily monitored and controlled from thousands of miles away with Teltonika Remote Management System. It allows generating customizable alerts, reports and enables direct access to the substation controllers connected with TRB142, even without a Public IP.

BENEFITS
/TRB142 is easy to set up, easy to install, and even easier to maintain with full support for Teltonika Remote Management System. It is also simple to scale as multiple devices configure all at once using RMS.
/This gateway is very reasonably priced and features robust 4G LTE Cat1 – designed for serial interface communication where low data speeds are needed.
/Advanced firmware functionality includes support for industrial, networking, and remote management protocols, such as Modbus RTU, MQTT, DHCP, SNMP, and features firewall and multiple supported VPN services.



ROUTERS

Our routers are equipped with a variety of wireless and wired connectivity options and technologies which makes them an essential tool to connect people, machines and infrastructure across most market sectors. INTELLIGENT TRAFFIC SYSTEM CONNECTIVITY

INDUSTRY & AUTOMATION

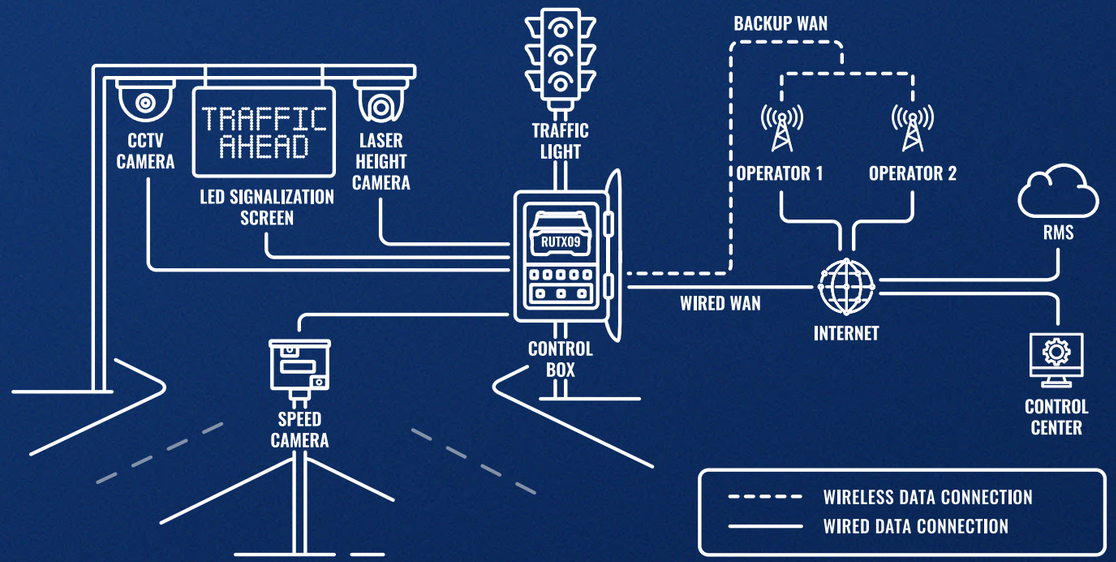
According to the projections by the United Nations, the world population will reach 9.8 billion by 2050. Ongoing mass urbanization is forecasted to result in 50% of the world's population living in cities. Apart from numerous city planning, social and economic challenges, these two factors will contribute towards increased congestion-related problems. Recent surveys suggest that the average American spends around 19 days per year stuck in traffic. However, without advanced, centrally controlled intelligent traffic systems, this number would be far higher.

SOLUTION

Globally, intelligent traffic systems are in different development stages. Integrators and governments worldwide have already recognized that a single Internet connectivity source is insufficient due to high maintenance costs and imperfect availability. RUTX09 cellular router with LTE Cat 6 and Dual SIM functionality is perfect for providing backup cellular connectivity for intelligent traffic infrastructure because it is secure, reliable, and easy to use. Besides, it has carrier aggregation functionality, ensuring efficient use of mobile GSM resources. Operators are motivated to offer more attractive data service plans for large scale projects compatible with carrier aggregation technology. The dual SIM functionality ensures that even if one operator service gets interrupted, the RUTX09 will switch to a redundant operator to provide uninterrupted connectivity.

BENEFITS

/Scalability – backup connectivity projects for Intelligent traffic systems require a large number of routers. RUTX09 is compatible with Teltonika RMS, allowing integrators to configure an infinite number of devices remotely and instantly.
/Cost-efficiency – it is less expensive to install a cellular router for the Internet connectivity redundancy rather than rely on a single source of connection and carry out reactive maintenance upon losing the service.
/Ease of use – with RUTX09 and RMS, system operators can be in control of their network infrastructure from a single control location even without a public IP! It is possible to monitor and control equipment that is thousands of miles away without any local presence.



FAST AND UNINTERRUPTED RETAIL CONNECTIVITY

RETAIL

Nowadays, most retail businesses are offering multiple means of customer services oriented to engagement and satisfaction. Connected services include offering public WIFI with captive portals for client engagement, digital signage screens, people counting solutions, and automated inventory management for stock control to have more operational control and transparency. Naturally, digital payment options and card payments remain a must-have option in a physical retail environment.

SOLUTION

4G LTE is becoming a more and more favorable option for fast and reliable Internet connectivity. With multiple cellular modules, higher LTE categories, mobile Internet services can match and surpass the speeds of wired connections in congested areas. However, cellular solutions can be deployed instantly without the need for cabling and arranging long-term contracts. Retail connectivity security, downtime, and availability challenges are all resolved by choosing a professional cellular router with two 4G LTE CAT6 modules working simultaneously. In the proposed solution with our RUTX12, the two SIM cards working together can provide speeds up to 600 Mbps and ensure that all retail solution components are connected. Two modules can increase solution security by splitting traffic between two LTE modules, e.g., corporate traffic and customer services.
As shown in the topology, the POS system, computer, and thermal camera connect to the router via Ethernet. Barcode scanners and tablets use the WiFi for a secure, private network. RUTX12 supports IPsec, OpenVPN, and other VPNs, allowing the companies to configure their networks to meet their needs and requirements. Finally, the RUTX12 is compatible with the RMS, enabling system operators to monitor and manage the whole network remotely, including remote configuration, firmware updates, notifications, reports, and much more.

BENEFITS

/Performance - RUTX12 with two LTE CAT 6 cellular simultaneously working modules can provide speeds up to 600 Mbps.
/Functionality – RUTX12 can split traffic between two mobile connections with load balancing.
/Remote monitoring – with RMS, you can conveniently monitor all network and make configurations remotely.
/Security – with advanced RutOS features, RUTX12 offers multiple VPN options, embedded firewall, and other security features to comply with high-security standards.

POE TECHNOLOGY SIMPLIFYING OFFICE NETWORK INTEGRATIONS

ENTERPRISE

Smartphones have certainly changed the way we interact with technology and each other. However, the office environment with all technological innovations has mostly stayed unchanged. Of course, analog phones got replaced with their modern digital versions. Standard networks have gone wireless using numerous access points across the office. Security cameras with connected access control devices are helping building managers to ensure the security of the employees. Naturally, changing the way we interact with technology poses new challenges for office network integrators.

SOLUTION
IP devices, such as IP Cameras, IP Phones, wireless access points, and access control solutions, can be powered by PoE and connected via the PoE switch – TSW100. The PoE technology makes the installation process faster because it does not require the services of electrical installers. Networking engineers can connect and deliver both power and data with one Ethernet cable for PoE compliant devices. In this specific example, the TSW100 PoE switch connects to our cellular router RUTX11. This secure, high-performance cellular router is responsible for Internet connectivity from wired or mobile sources. 4G LTE CAT6 mobile technology can deliver up to 300 Mbps over cellular networks. Naturally, if the primary connection is lost or unstable, RUTX11 can switch to another mobile provider due to its dual SIM and Auto Failover features. Besides, RUTX11 can deliver powerful wireless service with Dual-Band AC Wi-Fi functionality with secure and flexible usage settings and statistics for the users and system operators. Together, our cellular router RUTX11 and newly released PoE switch TSW100 is an excellent solution for office device connectivity deployment.
